## Uganda Refugee Response Plan (RRP) 2022-2023

Quarter 2

January - June 2023

## Overview

The sector's main objective is to ensure full integration of comprehensive primary health care services for refugees into national and local government systems, in line with the Health Sector Integrated Refugee Response Plan (2019-2024), launched in January 2019.

### Achievements

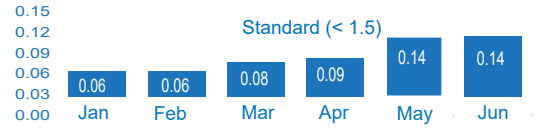
As at mid-year, the sector has been able to register success in ensuring critical morbidity and mortality indicators remain within the acceptable standards and efforts to transition health service delivery are on track.
The Under - 5 mortality remained below the standard of <1.5/1,000. Mosquito net distribution, Indoor residual spraying (iRS) as well as Integrated community case management (iCCM) have ensured that mortalities are contained. Measles vaccination coverage was (83%) against the standard of 95% mainly due to vaccine stock outs as well as the increased number of new refugees. The consultations per clinician per day were higher for the Congolese (DRC) population (65) than for the South Sudan (SSD) populations (40) than the acceptable standard of 50 consultations per clinician per day.

As of mid-year 2023, the refugee operation had identified and treated 7,874 children and 2,662 pregnant and lactating women for acute malnutrition, with a cure rate of 71.5%.
The Refugee Population based HIV Impact assessment (RUPHIA) revealed the gains in HIV epidemic control with the prevalence reported at 1.5% (1.8% females and 1.1% Males) 15 years and above. There are however still challenges with identification of all HIV positives and initiation on treatment standing at 81.8% and 89.5% though the viral load suppression is better at 92.5% against UNAIDs targets of 95:95:95.
With the commitment of the Ministry of Health, support of development partners, 85 out of 101 facilities have been coded. There are more temporary facilities in the SSD locations which wouldn't fit the criteria for transition. Efforts are ongoing to develop district transition plans and national transition guidelines to guide and fast track transition of health facilities to the MOH and district local government. All locations were able to continue to hold settlement level coordination meetings with co-leadership of the district and involvement of the different partners.

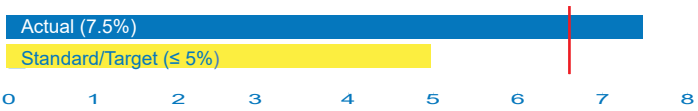
### Challenges and key priorities

With reduction in funding for the health sector, priority will be to ensure continued access to comprehensive primary health care services for the persons we serve through coordinated efforts towards transition as well as continued engagement with the ministry of health, district local government and development partners.

## Key indicators



Under-5 mortality rate per 1,000 children



Global Acute Malnutrition rate

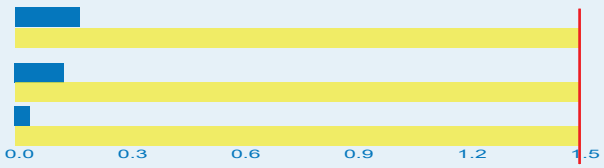
Health facility delivery rate

Measles vaccination rate

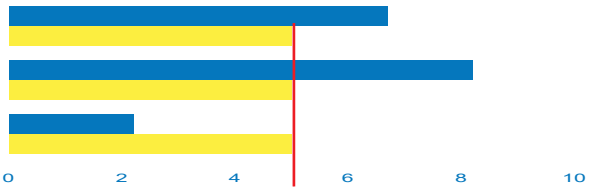
## Outcome: Improved access to adequate preventive, promotive and curative services for communicable and non communicable diseases.

| *Indicator* | *Actual* | *Target/Standard ('23) Revised* |
|---|---|---|
| **Under-5 mortality rate per 1,000 children per month** | | |
| - Congolese refugees | 0.17 | 1.5 |
| - South Sudanese refugees | 0.13 | 1.5 |
| - Other refugees | 0.04 | 1.5 |

*Actual* *against annual target* *or standard*



| | | |
|---|---|---|
| **Global Acute Malnutrition rate** | | |
| - Congolese refugees | 6.7% | ≤ 5% |
| - South Sudanese refugees | 8.2% | ≤ 5% |
| - Other refugees | 2.2% | ≤ 5% |



| | | |
|---|---|---|
| **Consultation per clinician per day** | | |
| - Congolese refugees | 65 | ≤ 50 |
| - South Sudanese refugees | 40 | ≤ 50 |
| - Other refugees | 59 | ≤ 50 |

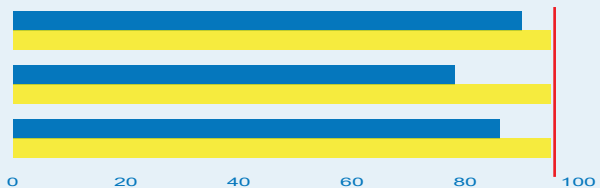
## Outcome: Improved HIV-TB prevention, care and treatment services

| Indicator | Actual | Target/Standard ('23) Revised |
|---|---|---|
| **Art retention rate** | | |
| - Congolese refugees | 90% | 95% |
| - South Sudanese refugees | 78% | 95% |
| - Other refugees | 86% | 95% |
| **TB treatment success rate** | | |
| - Congolese refugees | 92% | 95% |
| - South Sudanese refugees | 93% | 95% |
| - Other refugees | 90% | 95% |
| **Viral load suppression rate** | | |
| - Congolese refugees | 95% | 95% |
| - South Sudanese refugees | 90% | 95% |
| - Other refugees | 92% | 95% |



## Outcome: Strengthening the national health care system capacity to cope with the increasing demand for health services by refugees and host population.

| Indicator | Actual | Target/Standard ('23) Revised |
|---|---|---|
| **Facilities accredited by Ministry of Health in refugee-hosting districts** | | |
| - Congolese refugees | 97% | 100% |
| - South Sudanese refugees | 71% | 100% |
| - Other refugees | 100% | 100% |
| **Health Center IV and District referral hospitals supported** | | |
| - Congolese refugees | 100% | 100% |
| - South Sudanese refugees | 90% | 100% |
| - Other refugees | 50% | 100% |
| **Refugee settlements holding monthly coordination meetings** | | |
| - Congolese refugees | 100% | 100% |
| - South Sudanese refugees | 100% | 100% |
| - Other refugees | 100% | 100% |
