SOUTH SUDAN

Overview of Spontaneous Refugee Returns

(as of 30 April 2025)

KEY HIGHLIGHTS ON REFUGEE RETURNS

The return of **19,667** South Sudanese was verified and reported in April 2025. There is slight decrease **(8%)** as compared to the returns recorded in the month of March 2025.

The returnees arrival is due to insecurity in some of the countries of asylum especially Sudan, reduction of food ration and lack of employment and livelihood opportunities which impacted the spontaneous refugee returns to South Sudan during the reporting month.

Most of the returns in April 2025 were from Sudan through Wunthou (Joda) crossing point in Upper Nile State and Majokyinthiou in Northern Bahr El Ghazal while returns from Ethiopia were through Pagak in Upper Nile State.

This information on returnees was validated through UNHCR - IOM, RRC joint border monitoring on Sudan, Ethiopian and UNHCR Spontaneous Refugee border monitoring interviews for Uganda, Kenya, Democratic Republic of Congo, Ethiopia and Central Africa Republic during the month of April 2025 in areas of return in the following **10** states; Upper Nile, Northern Bahr el Ghazal, Warrap, Central Equatoria, Western Bahr el Ghazal, Western Equatoria, Jonglei, Unity, Eastern Equatoria and Lakes. Most of the verified returnees were from Sudan **(71%)** and Ethiopia **(26%)** while less than **10%** were from Uganda, Kenya, Democratic Republic of Congo and Central African Republic.

PUSH FACTORS

The most cited reasons for leaving Country of Asylum include:

- Fleeing Insecurity **(42%).**
- Food security-reduction in food ration **(26%).**
- Lack of employment and livelihoods opportunities **(10%).**

The most cited protection concerns at boder points and in areas of returns include:-

- Loss of Belongings/Theft, robbery, extortions **(12%)**
- Confiscation of personal identification documents **(9%)**
- Medical emergency **(7%)**
- Family separation **(7%)**

METHODOLOGY

UNHCR in collaboration with Relief and Rehabilitation Commission (RRC) and partners monitors cross-border movements in areas of high return at 42 border entry points with Sudan recording the highest border entry points. Information is collected regularly at border points and in areas of high returns through KII and FGD. The information was then triangulated with data collected during physical observations, and meetings with local authorities, faith-based leaders, law enforcement agents, and immigration officers at border entry points and areas of returns.

Disclaimer: *The number recorded is only indicative, and it covers the borders where UNHCR and partners currently have presence. It is most likely that more returnees are arriving to South Sudan than recorded due to using unofficial border points and/or travelling at night.*
