Uganda Refugee Response Plan (RRP) 2024-2025

Reporting Quarter

Q2 2024

Key sector achievements

The Public Health strategy envisions a country where refugees, and other persons of concern at all ages have healthy lives in which their well-being is promoted in line with Sustainable Development Goal 3. Health sector is delivered in line with the Uganda Health Policy, Uganda Health Sector Development plan II, Health Sector Integrated Refugee Response Plan, the 2017 World Health Assembly (WHA) resolution 70.15 and comprehensive refugee response framework and Uganda pledges to Global Refugee Forum.

Achievements

During the quarter, refugees continued to access health services at the static health facilities and outreach posts. 506,494 (372,073 refugees & 134,421 nationals) accessed OPD services, 18,926 admissions, 12,815 (7,192 refugees & 5,623 nationals) deliveries with skilled deliveries at 98% compared to last quarter at 97% and 2,044 surgeries were conducted, and 24,674 children received life-saving vaccinations while 4,163 (3,022 refugees & 1,141 nationals) malnourished children were successfully treated. In addition, 3,122 referrals were made to the secondary and tertiary hospitals. This is attributed to the capacity development of health workers on maternal child health care and VHTs on childhood illness management.

As a result of these lifesaving interventions, the under-five and crude mortality rates remained 0.07 and 0.03 deaths/1000/month respectively which is within acceptable ranges. Due to these lifesaving interventions, the under-five and crude mortality rates remained low at 0.07 in Q2 compared to 0.1 in Q1 and and crude mortality at 0.03 deaths/1000/month in Q2 compared to 0.05 deaths/1000/month in Q1, respectively, which is within acceptable ranges. While the workload of health workers was 44 consultations per clinician per day, which is within acceptable limits.

Despite the access, there was decline in the quality of health care in some settlements compared to the previous year that is attributed to the funding reduction in the health sector.

The Key challenges/opportunities

Medicines and supplies – there were stocks out of medicine and medical supply because of financing and supply-chain related challenges.

Low population coverage with key interventions to ensure adequate coverage e.g., family planning, immunization, health promotion and prevention programmes.

Inadequate budget – to cover the health promotion and disease prevention interventions that are intended to reduce the health facility visits which put pressure on the health facilities and high workload for the low number of health workers at health facilities.

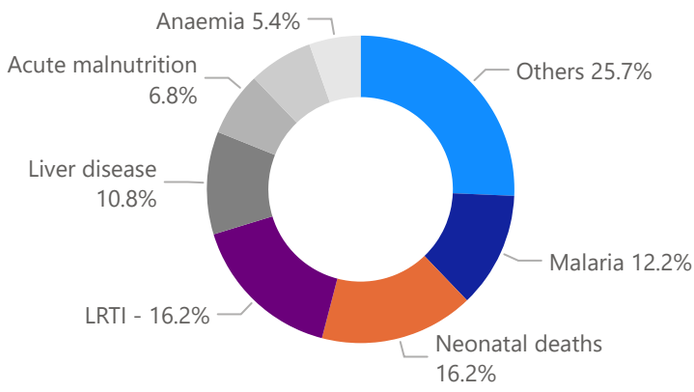
Low population coverage with key interventions to ensure adequate coverage e.g., family planning, immunization, health promotion and prevention programmes.

The Sector Priorities

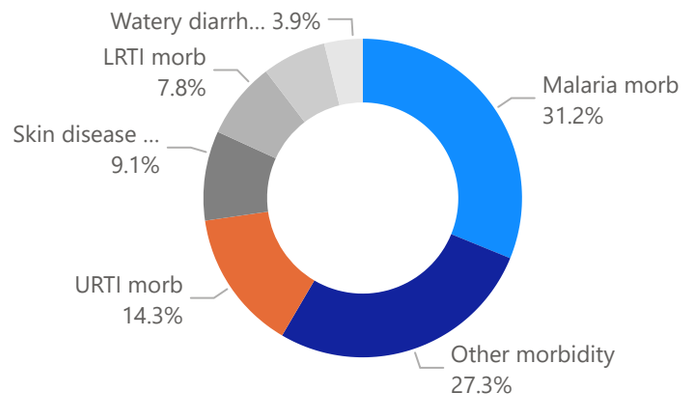
The sector priority is to strengthen a multisectoral health promotion and disease prevention through implementation of the community health strategy

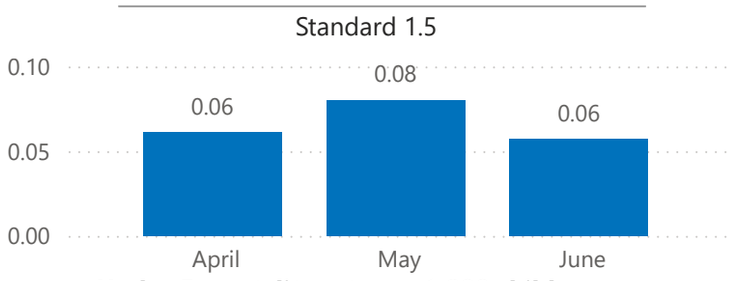
Ensuring system strengthening for the integrated health service delivery in the coded health facilities in the refugee settlements.

Mortality causes



Morbidity causes





Under-5 mortality rate per 1,000 children
