Country: Czech Republic | Interview Month: Multiple selections | Arrival: All | Oblast: All | Household type: All

To strengthen and promote an evidence-based protection response, UNHCR and its partner in the **Czech Republic** have been implementing a Protection Profiling and Monitoring exercise to regularly collect and analyze data about the profiles, protection risks and needs of refugees from Ukraine and monitor changes over time. In October 2023 a revised questionnaire was rolled out. This dashboard presents the main findings based on **480** interviews conducted between **Mar 2024 and Apr 2024**

This fact sheet is generated from the regional protection monitoring dashboard.

Methodology

Individual interviews are conducted in different locations, including transit centers, reception centers, and UNHCR office premises. Trained enumerators collect data digitally using the Kobo Toolbox, which is then safely stored in UNHCR's server.

While respondents are randomly selected to reduce bias, non-probability sampling is used. Results cannot necessarily be extrapolated to all refugees from Ukraine. The data for this dashboard has not been weighted.
