Lebanon Logistics and Telecoms Cluster: At a Glance

The Logistics and Telecommunications Cluster (LTC) Q1 Dashboard presents a snapshot of the cluster's activities and achievements. Between 2 and 16 March 2026, the team conducted extensive gaps and needs analysis and deep assessments to evaluate the impact of the escalation in Lebanon. The findings from these assessments informed operational planning and triggered the activation of the Cluster on the 16 March.

The Cluster's **Logistics response** focuses on coordination, information management, and facilitating access to common services, including storage and transport through convoys to hard-to-reach areas.
The **Telecommunications response** focuses on coordination with government counterparts and humanitarian partners, as well as the deployment of emergency telecommunications equipment and services across the country where it is needed the most.

44 Organisations supported

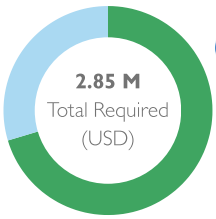
3 Coordination Meetings

10 IM products published

Logistics Response

- 3 humanitarian convoys facilitated to hard-to-reach areas, delivering critical relief supplies.
- Additional convoys delayed due to security constraints, impacting timely assistance delivery.
- Storage services provided in Beirut warehouse (1,500 pallet positions)
- LogIE Access Constraints Mapping Tool available for partners to monitor and report physical access challenges.

6 Months Funding Requirement

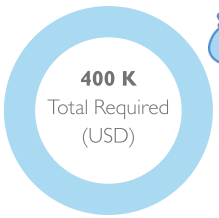


42.1% Funding Gap

Telecoms Response

- Assessment integrated into convoy operations to identify connectivity needs, information gaps, and power availability in affected areas.
- 2 Global Partner Teleconferences held to identify and collaborate on potential connectivity challenges.

6 Months Funding Requirement



100% Funding Gap
