

# REFUGEE SURVEILLANCE UPDATE (MABAN AND YIDA)

Epidemiological Week 27

1<sup>st</sup> – 7<sup>th</sup> July 2013

## Highlights

- The proportion of health facilities in Maban that submitted the weekly reports to the state and central level was 20 out of 24 bringing completeness to 83.3%. (*See list of health facilities in Maban and supporting partners on page 2*). All facilities serving the refugees in Maban reported on time in week 27, while those serving the host communities were 12 out of 16 facilities.
- All the three health facilities serving Yida refugee camp reported on time this week.
- Malaria was the leading priority disease recorded in the refugee camps (56.7%), followed by Acute watery diarrhea (31.9%), AJS (8.6%), and Acute bloody diarrhea (2.8%).
- Two hundred and seventeen (217) suspected Acute Jaundice Syndrome (AJS) cases (or Hepatitis E cases) and 4 related deaths were recorded from Maban and Yida in week 27.
- No case was reported from the host community this week.
- Gendrassa reported 38.9% of the cases, followed by Doro 36.9%, Kaya 16.8%, and Batil 7.4%.
- The cumulative AJS cases recorded from Maban refugee camps are 11,122 and 202 related deaths, while Yida has recorded 479 cases and 13 deaths.
- Two measles cases were reported this week from Batil and Kaya camps.
- No cases of meningitis, cholera, or viral haemorrhagic fever were reported this week.

## Reporting Performance

The total number of health facilities in Maban expected to report for *Early Warning and Alert Response Surveillance* (EWARS) system this week is 24. Of these, 16 serve the host community, eight serve refugee camps in Maban, and three serve Yida refugee camp. Three of the four silent health facilities serving the host community are operating but not reporting due to the long distance from Bunj town and lack of communication facilities.

## Epidemic Prone Disease Reported

### Acute Watery Diarrhea (AWD)

A total of 803 AWD cases were reported in Maban and Yida refugee camps during this reporting week with no related deaths. AWD accounted for 31.9% of the priority diseases reported this week. Proportion of cases below five years was at 65.1% of all reported AWD cases in all the camps.

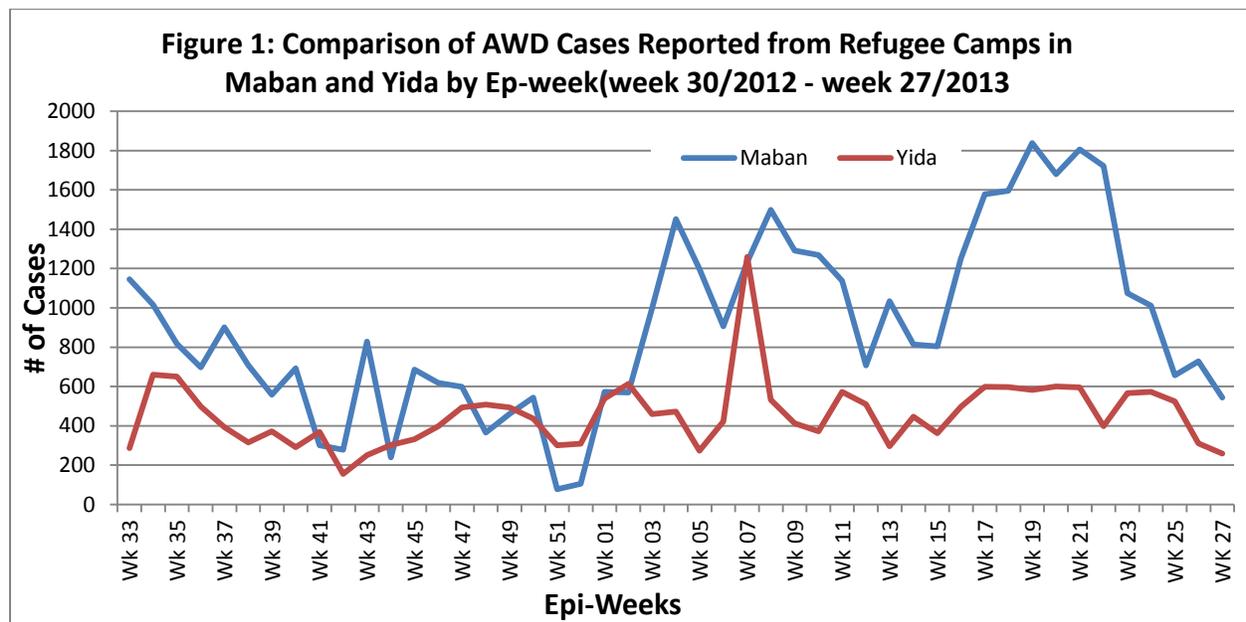

Figure 1 shows a comparison of AWD cases reported by Epi-week in year 2012 -2013 from facilities serving the Refugees in Maban and Yida. The incidence rate of AWD in the camps of Maban decreased in week 27. The cases among the Host community in Maban decreased to 105 from 343 the previous week with no related deaths.

### Dysentery (ABD)

A total of 70 cases of ABD with no related deaths were reported in week 27 from the refugee camps in Maban and Yida. This week recorded fewer cases compared to the previous week (75). Proportion of cases in children below five years decreased to 45.7 from 50.7% the previous week.

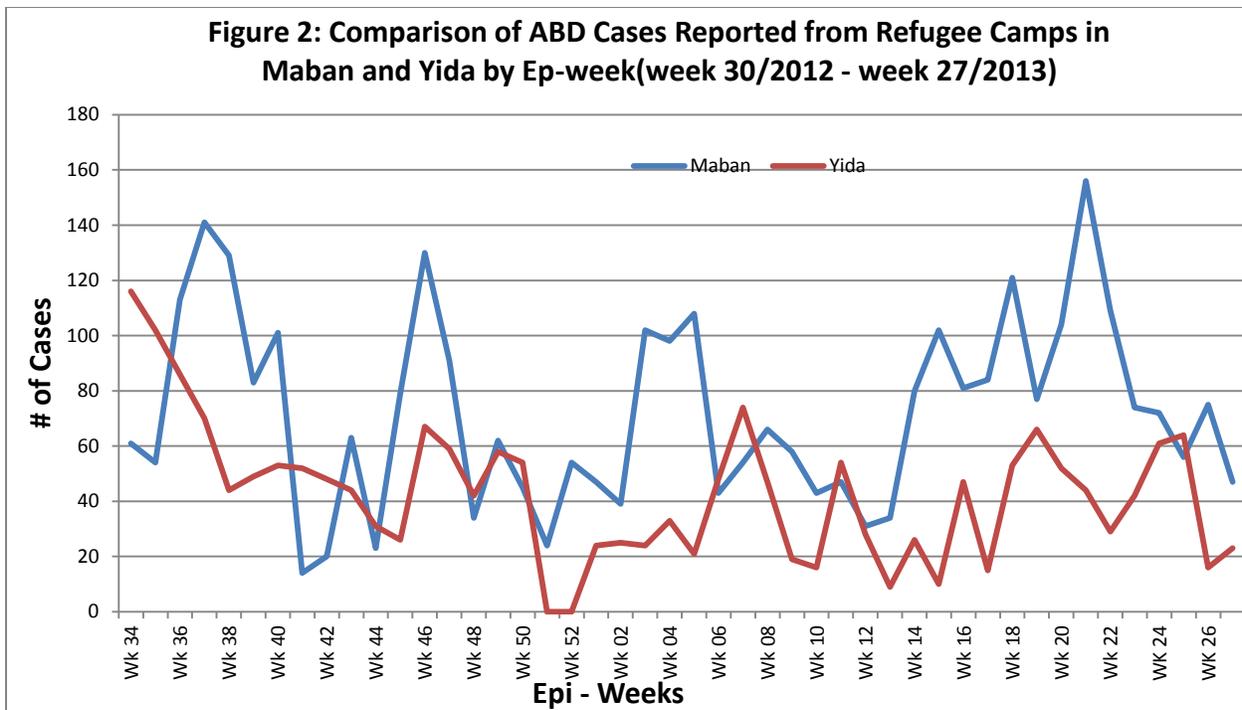

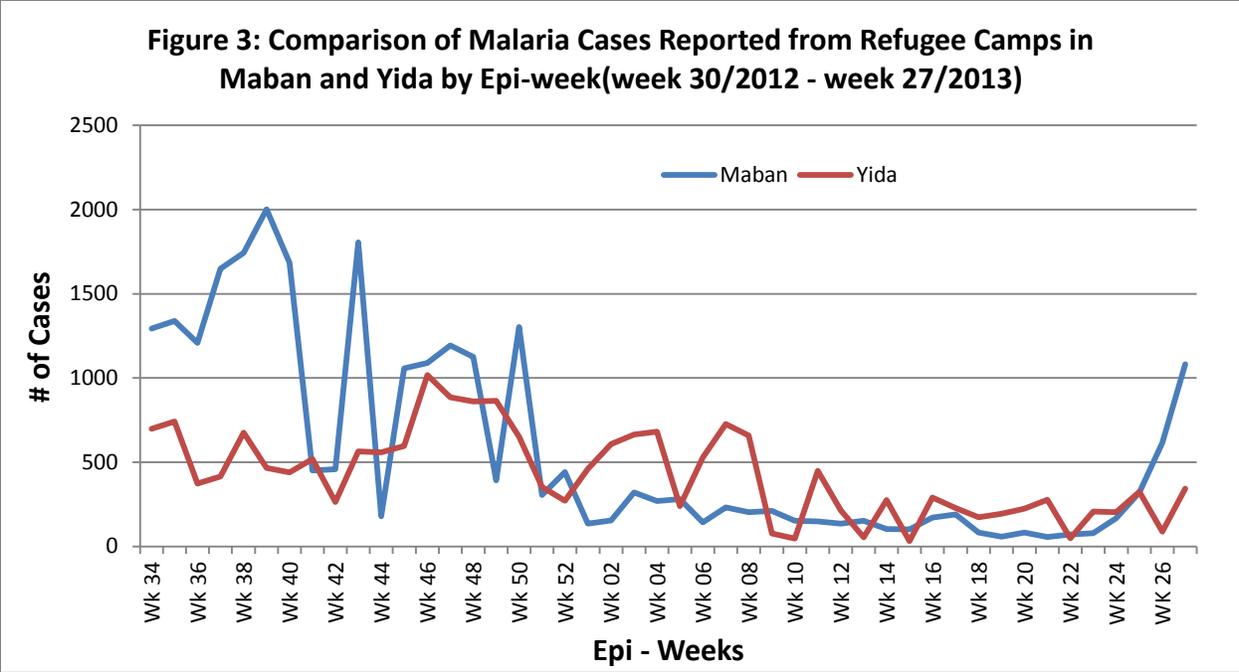

Figure 2 above shows a comparison of ABD cases reported by Epi-week and year 2012 – 2013 in Maban and Yida camps. The ABD incidence reported from the refugee camps in Maban decreased this week in Maban but increased in Yida. The ABD incidence among the host community in Maban decreased to 107 from 114 cases in the previous week.

## Malaria

Malaria incidence in Maban refugee camps this week was almost double (1081) compared to 615 cases in the previous week with no related deaths. Out of all the cases, 21.9% were reported in children below five years of age in both Maban and Yida. In Maban County, 503 cases of malaria with no related deaths were reported from facilities serving the host community. Malaria cases in the host community decreased this week compared to those recorded in the previous week (574). The under 5 years old in the host community had a higher incidence of malaria (41.8%) than those in the refugee camps (21.9%). The incidence of malaria among children has for a long time been higher in the host community than in the refugee camps in Maban.

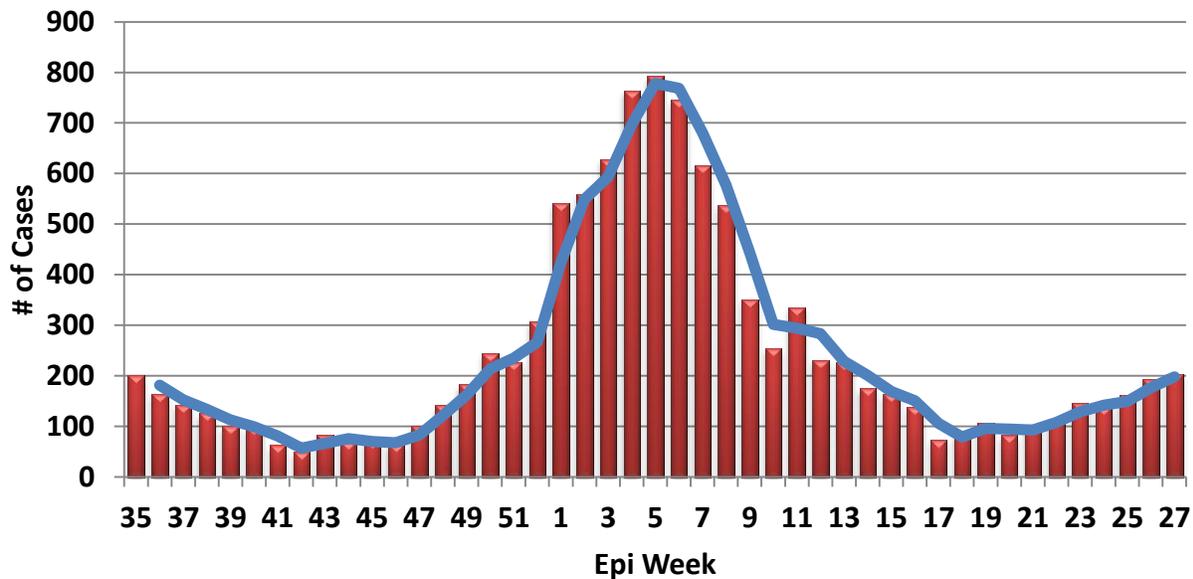

Figure 3 below shows a comparison of the incidence of malaria in Maban and Yida.

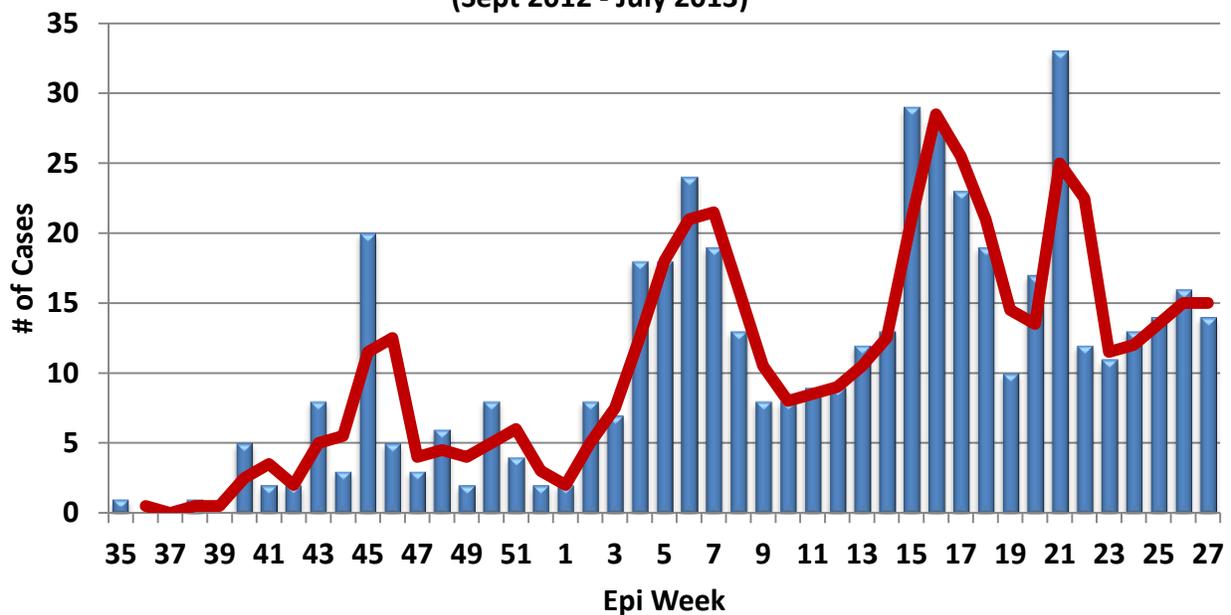

**Acute Jaundice Syndrome (AJS)**

A total of two hundred and seventeen (217) suspected Acute Jaundice Syndrome cases (or Hepatitis E cases) and four related deaths were recorded from Maban and Yida in week 27. (Figures 4 and 5 show AJS Epi-Curve in Maban and Yida). No case was reported from the host community this week. As shown in figure 4 and 5, cumulative AJS cases and related deaths recorded from Maban and Yida refugee camps were 11,122 and 202, and 479 and 13 respectively since the outbreak till week 27. New cases recorded in Maban refugee camps continued to present an irregular pattern for several weeks in a row. Compared to previous weeks, AJS/HEV cases from Batil have reduced remarkably since mid-February. Gendrassa and Doro are still reporting high numbers of AJS/HEV cases compared to the previous months. This week, cases from Doro increased again. Together with UNHCR, UNICEF, partners, and community leaders, we have held several meetings and toured the camps to assess WASH and hygiene standards. More emphasis this week was directed to improving hygiene at house hold level and awareness in the community. WASH crude indicators are good according to sphere and UNHCR standards. Hep E awareness has been stepped up in the community through schools, places of worship, women and youth groups, and social events. The pattern of the epidemic is unpredictable as upsurges and declines are irregular.

**Figure 4: Epi-Curve of Acute Jaundice Syndrome cases in the Refugee camps in Maban County (May 2012 - July 2013)**

**Figure 5: Epi-Curve of Acute Jaundice Syndrome cases in Yida Refugee Camp (Sept 2012 - July 2013)**

**Other Diseases:** No Meningitis, Cholera, Viral Hemorrhagic fever or Influenza like illness was reported during this week.
