## October 2014

### POST 15 DEC 2013 SOUTH SUDANESE POPULATION

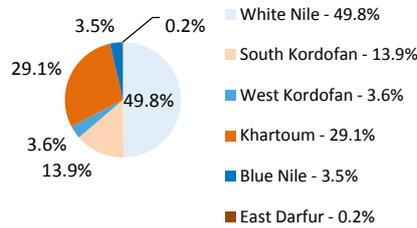

41,912  
registered at  
Level 1

0  
registered at  
Level 2

64,015  
arrivals yet to be  
registered

105,927  
total

Location of Displacement

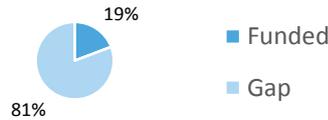

Note: Level 1 registration refers to household registration at time of entry. Level 2 registration refers to individual registration with biometrics.

### FUNDING STATUS (Interagency Appeal - 16 Oct 2014)

\$21,774,935  
funded

\$113,565,811  
requested

### SECTOR INDICATORS

Note: There is incomplete data for many sites in Sudan, so only sites with available data have been reported on below.

Indicators	Registration

# October 2014 Explanatory Notes

This Indicator Report provides a monthly snapshot of the regional response to the South Sudan Situation. The indicators included report on the Post 15 December 2013 South Sudan caseload only. The report is prepared through collaboration with the reporting country and the Regional Support Hub, Nairobi. The notes below provide further contextual information on various sector indicators:

## REGISTRATION

Due to limited access by UNHCR and partners in the most affected areas in Blue Nile, White Nile and South and West Khordofan, estimates provided are collations of various Government of Sudan agencies (Humanitarian Aid Commission, HAC and Commission of Voluntary and Humanitarian Work, CVHW), local partners (Sudanese Red Crescent Society, SRCS, and ASSIST) and IOM. HAC and SRCS provide new arrivals estimates from border points mainly at Joda, Al Kueik, Gedeid and El Leri.

Working with SRCS, UNHCR has conducted household (level 1) registration in the four White Nile camps of Jory, Alagaya, Al Kas hafa and Alredies from which registration aggregated figures by sex, age cohort, ethnicity and specific needs are reported. In the Blue Nile state, an unstandardized registration is conducted by ASIST, which reports non-aggregated caseload totals. In the South and West Khordofan, IOM similarly collects non-aggregated figures.

White Nile, South Khordofan and Blue Nile receive the largest number of South Sudan refugees in Sudan largely due to their proximity to the oil rich Upper Nile and Unity states of South Sudan where the armed conflict between government and non-state forces is concentrated. The regions are also closer to the Lakes state of South Sudan where ethnic militias have been heavily engaged in armed conflict.

After sharp increases of arrivals in April 2014, there were some decreases between the months of May and September, coinciding with the heavy rainfall season which caused floods and affected transport routes. Sharp increases are feared after the end of the rain season in October.

## CHILD PROTECTION

Child specific information and services are only available for the White Nile camps where over 90% of refugees have undergone standard UNHCR Level 1 registration and basic camp facilities have been developed. More data will be available as the population settles. For the rest of the locations, information will be available once some forms of registration are conducted and enhanced UNHCR and partners' presence is secured. BIAs and BIDs have not yet been filled out for UAMs as the Sector lead is UNICEF and these assessments do not fall under their mandate. UNHCR is working on partnerships with the Ministry of Social Welfare, MOSW, so as to ensure that the assessments are conducted and targeted assistance is provided.

## EDUCATION

Education facilities and services are yet to be developed across all locations. Where refugees have integrated into the local communities, information about the enrollment of children in education is unavailable.

## SGBV

Information on SGBV is yet to be systematically collected. This may be attributed to the limited presence of agencies in these areas.

## WASH

Data is available only for White Nile camps where basic camp and sanitation facilities have been built.

## SHELTER / SITE

5,854 shelters have been provided in Al-Kashafa, Radies, Jurri and Al-Alagaya. These sites are developed with the modular plan provided by UNHCR. Camp development work has been initiated through partner organization on the new site in White Nile state to accommodate South Sudanese refugees. Coordination/ discussions are in progress for the new site/camp for the new arrival of south Sudanese refugees. Bantiu (Khartoum open areas) Camp development work has been initiated with the borehole on site. Site layout will follow soon according to the plan provided by UNHCR. Technical team has been continually providing support to the administration office over ongoing repair and maintenance in the office.

Shelter information has not been collected across all locations although shelter materials have been provided in some locations especially in the White Nile. As the population settles and access of agencies improves, specific data will be collected.

## HEALTH

Primary health care facilities are available in four camps: Alredeis, Jorey and Alagaya (supported by UNHCR, WHO, and ministry of health), and El Kashafa (supported by MSF). The Ministry of Health and other partners are still discussing the mortality data viability and recording processes. The governmental counterparts still consider mortality data as confidential information and Refugee specific data on mortality rates and Child/maternal deaths are still unavailable. UNHCR is discussing this issue with WHO and MoH and a consensus is expected to be reached soon. For the time being, only the crude number of deaths is reported against in the MoH reports, no other information is reported (Age, gender, during birth, SS or host community etc.). UNHCR will start reporting only on crude mortality rates starting from November until a consensus is reached for other indicators under Health.

## NUTRITION

Acute malnutrition prevalence in new arrivals is not yet reported on in Sudan as standardised screening among new arrivals is yet to commence. Some nutrition screening is taking place in El Kashafa, Jouri, Redeis and Al Alagaya, however getting high quality data is a challenge.

The clinic in El Kashafa is a semi-permanent field hospital operated by MSF. MSF is providing screenings and RUTF to the camp and also to the adjacent camps of Jouri and Redeis. In their screening outreach, members of the community from all three camps who know that their children might have malnutrition make sure to approach the clinic screening team. As such, the data is not an accurate representation of malnutrition among new arrivals.

The clinic in Al Alagaya is a basic primary health care center. Two local organizations have been working in Al Alagaya (Sudanese Red Crescent Society and Global Health Foundation), both organizations are providing nutritional screening teams and the teams compile data together and send it to the Ministry of Health. There are duplications in reporting, especially for the denominator, which has diluted the nutrition data.

UNHCR has started supporting some aspect of the clinics in Jouri and Redeis and is exploring the possibility of having a separate OTP center in each camp. UNHCR also conducted a monitoring mission in White Nile State.

With the guidance of the MOH, both screening teams in Al Alagaya has been briefed on reporting processes and data quality issues and were advised to not have two teams out at once. In the future, one team will do the screening and the other team will do health education.

## ACCESS TO ENERGY

Services are not provided.
