EP and TC: Entry Points and Transit Centres

This Indicator Report provides a monthly snapshot of the regional response to the South Sudan Situation. The indicators included report on the Post 15 December 2013 South Sudan caseload only. The report is prepared through collaboration with the reporting country and the Regional Support Hub, Nairobi.

The notes below provide further contextual information on various sector indicators:

### EDUCATION

The education indicators for Gambella continue to show a 1% decline in the period from primo January to primo February 2015. The overall enrolment rate for the age group 3-18 has dropped from 54% to 53%. Enrolment for Early Childhood Education (3-6 years-old) remains weak for the three camps of Kule, Tierkidi and Leitchuor and is now at 35% which has slightly gone down by 1% as compared to previous month. Primary enrolment - A slight increase has been noted in this category. However, it must be noted that the enrolled in many cases are above the target age of 7-14, which is statistically somewhat misleading.

Please note that the reporting is covering enrolled students and not attendance (the actual number of children attending classes). The sector is experiencing a discrepancy between the two, which is being strategically addressed by the Gambella Education Working Group.

### WATER, SANITATION AND HYGIENE

The WASH indicators have been generally maintained and slightly improved in the period from primo January to primo February. Significant improvement was observed in Leitchuor refugee camp on sanitation coverage and decreasing in Kule and Tierkidi camps due to high filling rate of latrines. Water coverage was slightly dropped down in Kule and Tierkidi camps due to the health incident which occurred on 17th November in Kule camp and stopped water supply for consecutive four days.

The indicators for the camps are broadly administrative indicators i.e. the indicators are currently relying on total camp population (entire protected refugee population) as the denominator however indicators for entry points/transit centers are calculated on the population actually residing in the camp and accessing WASH services being offered. At entry points and transit centers, we normally have varying refugee numbers characterized by spikes and valleys, which requires a delicate balance on maintaining an optimal level of infrastructural investment to ensure that resources are not misappropriated. Ideally, refugees are not expected to have a prolonged stay, and when this happens it affects the level of WASH assistance accessible.

### NUTRITION

All recovery rates for both SAM (OTP) and MAM (TSFP) are well within the SPHERE standards of performance.

### SHELTER

Entry points and transit centers are all with communal hangers and therefore not included in the matrix. The indicators are based on the total number of registered households.
