Calculation of disease alert thresholds:

Watery diarrhoea = 1.5 x baseline*

Bloody diarrhoea = 1.5 x baseline*

Measles = 1 case

Meningitis = 5 cases

Acute Flaccid Paralysis = 1 case

Acute Jaundice Syndrome = 1.5 x baseline*

Footnotes

* baseline = average incidence or number of cases over the previous 3 weeks

* % morbidity refers to proportional morbidity of the disease for the current reporting week

** Incid / cases is the incidence (/1000/week) or number of cases for the current reporting week (incidence is shown unless otherwise indicated)

*** Trend shows if the incidence or number of cases between the previous and the current reporting week increased (↑), decreased (↓) or remained the same (↔)
