

LEBANON: RRP6 MONTHLY UPDATE - FEBRUARY

PUBLIC HEALTH

KEY ACHIEVEMENT OF THE MONTH

3,292 children under 5 years of age received routine vaccinations

HIGHLIGHTS:

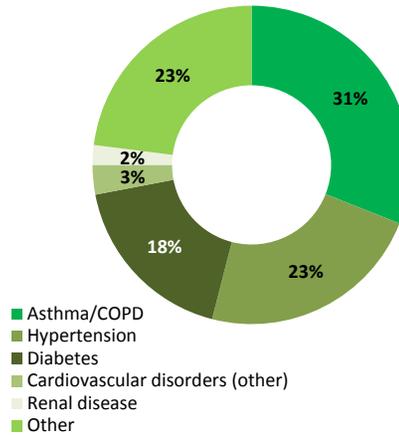

The sector maintains an effective response in providing healthcare to persons of concern. Supporting and facilitating access to healthcare for vulnerable groups, including children under 5 years of age, pregnant and lactating women, and the elderly is a primary focus.

Efforts this month centred on improving the quality of and access to primary healthcare interventions as the entry point into the healthcare system.

Improvements have been noted regarding the referral of refugee patients to secondary healthcare. Clear guidelines were developed by the sector regarding secondary healthcare services and rights. These, coupled with an improvement on the admissions framework, have seen a reduction in secondary healthcare referral difficulties.

Chronic health condition %

as of January 2014

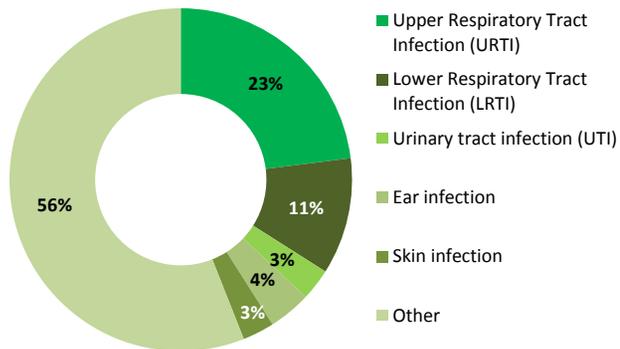

NEEDS ANALYSIS:

Partners have contributed greatly to ensure activity reporting meets the planned targets. This will continue to improve as partners develop better monitoring and evaluation tools to capture sector activities within the reporting timelines. The sector co-leads are working closely with all partners to ensure that quality and timely activity data is provided. As such the monthly indicators are moving towards planned targets. This will contribute to reflecting the actual health needs of affected populations and improve planning to achieve sector goals.

The sector continues to focus on improving information and communication so that refugees and affected populations are aware of their rights and the services available within the healthcare system. This will include greater coordination with health partners so they can advocate for the targeted population groups, as well as for the development of sustainable healthcare packages that meet their immediate needs.

Acute health condition %

as of January 2014

PROGRESS AGAINST 2014 TARGETS

		End-2014 Target
