

To guide upcoming winter assistance distributions in Zaatari camp, REACH in collaboration with UNHCR conducted a Winterization Rapid Assessment from 15-22 August 2016. Data was collected by a mixed-gender team of nine UNHCR and partner enumerators who conducted interviews at the family level across a random sample of 388 households. Findings are generalizable at the camp level with a 95% level of confidence and 5% margin of error.

**This factsheet presents key findings about winter shelter repair and NFI needs in the camp.**

### Overall winter preparedness

Respondents' perceptions of their families' current level of preparedness for Winter 2016:

### Shelter maintenance needs

#### Suitability

Respondents' perceptions of the suitability of their family's shelter:

Reasons for shelter unsuitability:<sup>1</sup>

96% of families assessed live in caravans and 4% live in mixed caravan-tent structures<sup>2</sup>  
95% of families reported connection to the Zaatari electrical network

#### Ability to make repairs

Respondents' perceptions of their families' ability to perform shelter repairs themselves:

Most frequently cited reasons amongst respondents who perceive ability as weak/very weak:<sup>1</sup>

Plastic sheeting (81%), metal sheeting (48%), and filler for cracks (37%) were the most frequently cited materials families need to conduct repairs themselves.<sup>1</sup>

### Winter NFI needs

#### First priority NFIs

Top 5 NFIs cited as a first priority need:

Most cited reasons for top 3 first priority NFI needs<sup>1</sup>:

#### Heaters

Number of heaters per family:

Functionality of families' primary heater:

99% of families reported possessing a primary heater that requires a gas cylinder to operate  
40% of families with a functional primary gas heater reported they do not possess a gas cylinder

#### Children's clothing

Perceived adequacy of children's current clothing for winter, amongst families with children (84%):

Top 3 clothing items cited as 1st, 2nd, or 3rd priority, of families reporting inadequate/very inadequate:

48% of families with children reported jackets as a **first priority** need, followed by trousers (29%) and shoes (11%).

<sup>1</sup>Multiple responses could be selected

<sup>2</sup>Shelter type was assessed by direct observation from the enumerator

<sup>3</sup>Findings are indicative rather than generalizable to the target population
