¹Actual capacity is calculated as the subtraction of current places minus 11.5% which is this week's estimated average natural loss for mainland and 4% for islands. Natural loss is the number of places that cannot currently be used because of damages/repairs, protection issues, family size, etc. The formula applies to all type of accommodation. Actual capacity is a close estimate of available places to be used as reference.

In some cases, current population may exceeds the actual capacity due to the estimation of the natural loss.

²Occupancy rate is calculated as the percentage of current population over actual capacity.

The actual available capacity is estimated to be at 335 places (mainland: 238 / islands: 97).

As of today 235 places have been reserved for planned transfers (mainland: 168 / islands: 67).

Considering an average natural loss (10-15%) the remaining available places are 75 (mainland: 50 / islands: 25)
