DRC NEW INFLUX TO RWANDA: UPDATE # 17
29 June 2023

KEY STATISTICS

8,666 new asylum seekers arrived in Rwanda from DRC between November 2022 and 29 June 2023

1,775 asylum seekers were relocated to Mahama camp up until 12th January

6,891 asylum seekers accommodated at Nkamira Transit Site

55% of the new arrivals in Rwanda are children below 18

Most of the new arrivals originate from North Kivu (Masisi and Rutshuru)

OVERVIEW

The continuous instability within Eastern DRC is resulting in an increase of new asylum seekers arriving in Rwanda. As of 29 June, over 8,666 individuals have arrived in Rwanda since mid-November 2022.

Between the end of November and beginning of January, new arrivals were initially received at Kijote Transit Centre before being transferred to Mahama refugee camp. Due to the increasing numbers, however, and the fact that Mahama Camp has reached capacity, on 12 January 2023, the Ministry in charge of Emergency Management (MINEMA) informed UNHCR of the decision of the Government of Rwanda to host asylum seekers close to the border at a new site - Nkamira.

With the steady flow of new arrivals in the first half of 2023, as of 13th of June, the Nkamira Transit Site was declared to have reached its hosting capacity and thus new arrivals will again be hosted at Kijote Transit Centre until another viable facility is identified. Working alongside partners, UNHCR continues to provide basic services to support the new arrivals hosted in Nkamira, Mahama and the Kijote Transit Centre.
Sector Response

MINEMA and UNHCR are co-leading the response at Nkamira alongside ADRA, World Vision, Save the Children, Plan International, Prison Fellowship, Red Cross, WFP, and UNICEF. Other UN agencies such as UNFPA and IOM have also supported with technical expertise and in-kind materials. Weekly coordination meetings are happening at the field level and three high-level coordination meetings have also taken place in Kigali.

Protection

UNHCR protection staff continue to be present providing fundamental protection and assistance, alongside partners in Nkamira and Mahama refugee camp. Child protection and Gender Based Violence (GBV) services are available through Plan International Rwanda (PIR) in Nkamira and Save the Children International (SCI) in Mahama, while legal assistance and community-based protection services, including assistance to people with specific needs, are provided by Prison Fellowship Rwanda (PFR). GBV response services are provided to survivors who experienced GBV incidents during flight and during their asylum.

Best Interest procedures have been carried out for 500 unaccompanied children and separated children (UASC) (399 from Nkamira and 101 from Mahama) and 278 Best Interest Assessments are being carried out for children in Nkamira and Mahama. Currently, 36 children with disabilities are also supported, including four UASC.

Between 15 -29 June, over 1,855 children participated in child-friendly spaces programs, where activities like drawing, painting, drama, modern dance, traditional dances, football and volleyball were on offer.

Community-based protection mechanisms are functioning and monitored in Nkamira and Mahama by UNHCR partners. Community-based protection structures are contributing to addressing the gap in the community by raising awareness on child protection and GBV prevention and mitigation. In this period, 1452 individuals were reached with messages on child’s rights, Sexual and Reproductive Health Rights (SRHR), and prevention of gender-based violence.

The Government of Rwanda (GoR) is leading the process of recording the new arrivals and conducting nationality assessments. Formal registration of the population has yet to take place with discussions ongoing as to how to register...
the status of the new arrivals if the population decides to remain in Rwanda. UNHCR has supported the birth registration of 61 new-borns who have been issued with a birth certificate.

**Health**

UNHCR provides primary health services for the new arrivals at Nkamira and Mahama refugee camp in partnership with Save the Children International (SCI). Over the previous week (22-29 June), a total of 1,576 consultations were conducted for asylum seekers hosted in Nkamira, including 415 (26%) for children under 5 years of age. 31 individuals were subsequently referred to a higher level of care for more investigation and treatment. The main cause of consultation remains respiratory tract infections (38.7% of consultations). Health partners also supported the deliveries of 10 new-born babies and continue to help 122 pregnant women at both Mahama and Nkamira.

Measles vaccination coverage among the new arrivals has now reached 98.5%. In addition, 121 children (aged 9 months to 15 years) among new arrivals received their measles vaccination over the last week. Booster doses for measles are also being provided in Mahama camp and the departure site where asylum seekers are hosted. Currently, more than 90% (18,289 of the 20,209 targeted) children received the second dose, and the campaign continues.

**Shelter**

Asylum seekers at Nkamira are currently being accommodated in 45 communal hangars which have been constructed since the site’s opening. Each accommodation hanger is partitioned into 20 rooms and men and women are currently assigned separate living areas. Nkamira Transit Site is now considered full and there is no additional space for construction of hangars. Thanks to donations from SOLEKTRA and ALIGHT, solar lamps have been distributed to asylum seekers at Nkamira.

Given that Nkamira Transit Site has now reached maximum capacity, UNHCR is working with the Government of Rwanda and MINEMA who have indicated that additional space to host new arrivals has been identified in Mahama refugee camp. The construction of additional shelter in Mahama is critical to meet these needs. Based on a shelter assessment, it is estimated that an additional one million USD is required to construct 483 shelters to accommodate around 6,000 individuals who are expected to arrive over the coming months.

**Food and Nutrition**

WFP continued to provide two hot meals every day to all asylum seekers through its collaborating partner ADRA. The hot lunches and dinners include fresh vegetables and alternate maize meal with rice. Furthermore, the most vulnerable groups got nutritious morning porridge, including children under 5, pregnant and breastfeeding women and girls, and people living with HIV or TB. Nutrition screening is also ongoing for freshly arrived children, 38 children with moderate acute malnutrition (MAM) and three people with severe acute malnutrition (SAM) continue to be monitored and supported at the Nkamira transit site.
**Education**

Following the roll out of the education in emergency, a total of 2,119 students in Nkamira are reported to be attending in the school within the site which operates in two shifts throughout the day. There are currently 10 classrooms in use at Nkamira Transit Site. These classrooms are substantially overcrowded and lack basic facilities such as latrines. As part of the recommendations following a stakeholder meeting convened by the Rubavu District Mayor's office, a school integration taskforce will be established composed of local District and Government agencies working in education, as well as UNHCR and World Vision, to conduct a joint assessment of the capacity of the public schools located within reasonable distance from Nkamira Transit Site to support refugee integration from September. In addition, an intensive language and curriculum orientation for students which will be organized from 20th July to 31st August 2023 at the nearest public school. Qualified national teachers will be selected by the taskforce to facilitate the orientation and then conduct placement examinations for students at the end of the orientation. Planning is also undergoing for similar intensive orientation programme targeting over 680 students who were transferred to Mahama refugee camp.

**WASH**

Water, Sanitation and Hygiene services for asylum seekers at Nkamira Site is ensured through the provision of a range of basic services and facilities. Currently 64 latrine stances are in use, serving 105 persons per drop hole (over UNHCR's emergency standards of 50 persons per drop hole). In addition, there are 100 shower rooms serving 67 individuals per shower stance and 52 usable water taps within the site, serving 130 individuals per water tap. Increasing number of facilities and maintaining the existing WASH facilities at operational level is a priority for UNHCR to reach sanitation coverage thresholds. There is an ongoing construction of 20 additional latrines.

An average of 22 litres of potable water is provided per person per day at Nkamira, above the minimum emergency standards of 15 litres of water per person per day. The center also has four water storage facilities with a total capacity of 70 cubic meters for emergency water storage supply. Regular disinfection at sanitation locations is conducted to maintain appropriate standards. The community is supported to keep good sanitation conditions through disseminating the hygiene promotion messages and regular latrine emptying. UNHCR, UNICEF and World Vision continue providing hygiene items at the site and have put emphasis on upgrading the water supply system, redesigning the sanitation infrastructure, and increasing sanitation coverage.

**Interagency Budget Needs**

**$16.1 million** is required to respond to the needs of the asylum seekers at Nkamira Transit Site and Mahama refugee camp for the first six months of the response in 2023. The budget is calculated based on an estimate of 10,000 new arrivals and considers the needs of implementing NGO partners working with UNHCR, UNICEF, WFP, and FAO. UNHCR has currently only received funding from the USA, European Union Humanitarian Aid, and Japan to support the response. As a result, UN agencies are currently repurposing funds from the existing refugee response to support the new arrivals.

Given the current lack of funding, calculations are currently being made in terms of what is needed for the second half of 2023 as new arrivals continue to flee to Rwanda. In particular, additional funding will be needed for the expansion of shelter in Mahama refugee camp.
