

UNHCR Environment and Climate Action in Hodh Chargui, South-East Mauritania

May 2025

Hano, a Malian refugee and leader of the Voluntary Refugees for the Cleanliness of Mbera Camp (VRPC) — a community initiative working on environmental protection and sanitation, including latrine maintenance — waters her plantation in the VRPC's market gardening perimeter, contributing to their broader efforts to promote a healthier and greener environment.. ©UNHCR/OMAR DOUKALI

Mauritania is a Sahelian country that has long been affected by desertification and drought. The Sahel is one of the regions most impacted by climate change, with a projected temperature rise of 3°C compared to the global average of 1.5°C by 2050. Extreme temperatures and weather conditions associated with climate change have recently contributed to crop degradation and soil erosion in the south of the country and the oasis areas. Rural households living there are finding it increasingly difficult to sustain their livelihoods. The prolonged presence of refugees in Mbera camp in Hodh Chargui has also increased pressure on local sources of water, fuelwood and grazing land, creating potential sources of tension between refugees and host communities.

The Mauritanian Government, alongside humanitarian and development actors, have made environmental preservation and regeneration a central element of their strategies and initiatives. Mauritania has in fact developed a National Strategy for the Environment and Sustainable Development. The refugee-hosting region of Hodh Chargui has in turn aligned its Regional Strategy for Accelerated Growth and Shared Prosperity (SCRAPP) with this national environmental strategy, with the 2030 objective being to slow down environmental degradation and reverse trends so that sound natural resources management underpins green and inclusive growth.

In complementarity with the Government, the United Nations is working to strengthen the resilience of ecosystems, communities and national systems in Hodh Chargui. UNHCR focuses especially on: (1) preserving and restoring natural resources, (2) providing clean and renewable energy, (3) promoting sustainable sanitation, and (4) promoting a green economy.

UNHCR Operational Needs in the Environment Sector in Mauritania

Year	2025	2026
Needs in US \$	\$1,642,278	\$1,532,778

Preserving and restoring natural resources

Reforestation: Since 2016, UNHCR and its partners SOS Desert and RET-Germany have planted thousands of trees inside and outside Mbera refugee camp thanks to the support of volunteers from host and refugee communities who are at the heart of this initiative. The significant impact of the support of the UN's Peacebuilding Fund (PBF) in this area was evident between 2021 and 2022, when enough resources were available for UNHCR to accelerate reforestation efforts and experiment with different techniques. In doing so, UNHCR deliberately involved local associations of women and youth.

- 69,000 trees planted in Mbera camp and nearby localities (Mbera 1 and 2, Samarassa, Libreini) between 2016 and 2024, including 20,000 trees in 2024
- 500 volunteers (260 men, 240 women) mobilized since 2022

Our Vision: Scale up reforestation projects to restore natural habitats and regenerate the soil around the Mbera camp and neighbouring communities. Reforestation will also improve social cohesion and the living environment for refugees and host populations.

Year	2025	2026
Trees to be planted	50,000	50,000
Budget in US\$*	381,000	381,000

*The estimated budget includes costs related to sowing, protection of reforested sites (sustainability), human resources (UNHCR and partners), and monitoring and evaluation.

Preventing and managing bushfires: Established in 2018 by refugee volunteers, the Mbera Fire Brigade works side by side with host communities to prevent and fight bushfires in and around Mbera camp, with support from UNHCR, SOS Desert, local authorities and camp coordination structures. Thanks to over 200 refugee volunteers and members of the host communities, hundreds of kilometres of firebreaks have been built and awareness campaigns on potential origins of fires and how to prevent them have been carried out within communities in the area.

- More than 250 fires extinguished by the Mbera Fire Brigade since 2018 (preserving an estimated land area of more than 100,000 hectares.)
- More than 2,000 kilometres of firewalls built since 2020
- More than 200 refugee volunteers are part of the brigade

Building of a firebreak by refugee volunteers from the fire brigade on the outskirts of Mbera camp in the Hodh Chargui region. ©UNHCR/Colin Delfosse

Our Vision: Strengthen local capacities to effectively respond to bushfires and ensure the safety of the people, goods and the environment. By supporting the efforts of local authorities, the Fire Brigade and other partners to prevent and control bushfires, UNHCR aims to limit the outbreak and spread of fires, and thus contain carbon dioxide emissions.

Year	2025	2026
Extension of fire breaks	500 km	500 km
Budget in US\$	280,998	280,998

Providing clean and renewable energy

Access to clean and reliable energy for cooking: In 2022, UNHCR initiated several pilot projects in partnership with GIZ and UNDP to encourage households to produce biogas locally by recovering sludge and to use environmentally friendly cooking solutions that do not present health risks.

■ **Around 2,000 refugee households** received cash assistance for the purchase of gas cylinders (LPG) through the “Cash for Gas” project.

Mohamed AG Litni, one of the first vendors and users of LPG in Mbera camp, demonstrates how the gas is used. With support from a UNHCR grant, he expanded his business and helped promote the use of gas within the camp.

©UNHCR/OMAR DOUKALI

Our vision: Promote the transition to clean, reliable energy for cooking. Over the next four years, UNHCR aims to stimulate the supply and demand for butane gas in the camp, by supporting households and businesses through the “Cash for Gas” project, and to build community biogas production units (in schools and communal areas). The use of biogas will limit the use of firewood for domestic purposes and livestock and will ease the pressure on natural resources in and around the camp (it is estimated that 60 tons of wood are being used every day in the camp).

Year	2025	2026
Number of households benefitting from the project “Cash for Gas”	2500	1000
Number of new biodigesters installed in community spaces	5	5
Budget in US\$	386,280	280,998

Electrification via renewable energy: Under the World Bank's financing mechanism for refugees and host communities (IDA-18 sub-window), the Mauritanian Government – in close collaboration with UNHCR – is developing a plan for the electrification of Mbera camp and surrounding areas with the construction of a hybrid diesel-solar power plant by 2026. To minimize its impact on the environment and reduce the cost of electricity in the camp, UNHCR is also solarizing its offices and targeted community structures (e.g. boreholes and health centres).

Our vision: Reducing UNHCR's dependence on fossil fuels and transitioning to the exclusive use of solar energy within its infrastructure in the Mbera camp by 2025. In 2024, UNHCR solarized its two main offices and continues its shift towards clean energy through the implementation of the Flow project, which involves solarizing the boreholes in the Mbera camp. The camp's schools and health centers were also solarized in 2024. This initiative will improve the quality of life for communities in the Mbera camp and nearby communities by reducing CO₂ emissions and the operational and maintenance costs of the water supply system.

Year	2025	2026
Percentage of camp infrastructure solarized	80%	100%
Budget in US\$	300,000	280,998

* Installation of solar systems in locations in the camp and in host communities in Hodh Chargui.

Promotion of green jobs

UNHCR, GIZ, and ILO offer refugees and host communities training and support for entrepreneurship in clean energy and environmental restoration, both in the Mbera camp and in nearby villages. In 2024, 50 green income-generating activities were created for refugees in the camp as well as in host communities. The government, through its employment support agencies, also backs these job creation initiatives.

- **Over 2000 individuals** worked in the market gardening sector and received technical training from UNHCR partner SOS Désert (2020-2024)
- **Around 150 young refugees trained** to install and maintain solar systems (2018-2024)
- **Over 110 small and medium-sized green enterprises** (market gardens, waste management, solar panel sales, etc.) were established in the camp and in host communities (2018-2024)

Our vision: Increase the number of green jobs available to refugees and host communities. Starting in 2025, UNHCR will work with multiple partners to better leverage the potential of agropastoral activities in Hodh Chargui (market gardens and green value chains) through the development of new sectors, supporting 50 income-generating activities focused on green job sectors and renewable energy.

Year	2025	2026
Number of green income-generating activities supported	50	40
Number of income-generating activities to support	50	75
Budget in US\$	74,000	294,000

2022-2026 Outlook

Key areas	Ongoing initiatives	Next Steps
Preservation and restoration of natural resources	-Reforestation -Fire prevention and management	-150,000 new trees planted -Capacity of Mbera Fire Brigade reinforced and sustained
Access to clean and renewable energy	-“Cash for Gas” Project -Popularizing cooking initiatives using biogas -Solarization of UNHCR infrastructure and services in Mbera camp Collaboration on innovative projects (LPG gaz BtoB, CoolTainer initiative)	-100% of households in Mbera use clean cooking energy -100% of UNHCR infrastructure running on solar energy Electrification of Mbera camp with a mix of solar and thermal energy
Sustainable sanitation and waste treatment solutions	-Latrine sludge extraction to fertilize tree planting and gardens. -Recovery of solid and liquid waste Construction of a rainwater evacuation system	-Improvement of standards (from 20 households per latrine to 10 households per latrine) -Reliable rainwater evacuation system installed. -80% of solid waste recycled Capacity of Refugee Volunteers Cleaning the Camp (RVCC) reinforced
Promotion of green jobs	- Market gardening -Training of young people in green industries and eco-friendly construction	- Surface area and productivity of market gardens increased - 1,000 women trained in advanced market gardening techniques - 2,000 young people trained in renewable energy and eco-friendly construction

Using Evidence to build a Greener Future: Promising green value chains in Mbera refugee camp and in Bassiknou

UNHCR and its partners carried out studies (2018, 2022, 2023)¹ mapping which activities have the potential to generate added value in the context of the Mbera camp and, more broadly, in Bassiknou. Three activities that may have beneficial effects on the environment identified:

1. Establishment of forage production chains

In five years, a local fodder production chain for livestock can be developed if two projects are implemented: the **production of high-yield fodder adapted to the agropastoral context** with the local and refugee communities, and the **creation of pastoral reserves** protected from livestock for five years and then with the gradual reintroduction of certain types of livestock.

2. Cultivation of Arabic gum

While managing Arabic gum stands sustainably and collectively is a challenge, benefits of their harvesting and exportation are numerous, given the growing international demand, particularly in the food industry. The preservation (and cultivation) of acacias is also an environmental asset in the context of the Great Green Wall project.

3. Reasonable management of waste

If focused on organic materials, waste management initiatives can contribute to better sanitation systems and create jobs linked to waste processing (effluent, compost, biogas).

Notes:

¹Identification of economic opportunities for the population of Mbera refugee camp and neighbouring host populations: an analysis of value chains (UNHCR, 2018); Study of green value chains and the socio-economic and environmental potential resulting from a circular-type economy (GIZ, 2022); Mission report: environmental support in the field (UNHCR - GTH, 2023)

2022-2026 Outlook

Key areas	Ongoing initiatives	Next Steps
