

# REFUGEE SURVEILLANCE UPDATE (MABAN AND YIDA)

Epidemiological Week 28

8<sup>th</sup> – 14<sup>th</sup> July 2013

## Highlights

- The proportion of health facilities in Maban that submitted the weekly reports to the state and central level was 20 out of 24 bringing completeness to 83.3%. (*See list of health facilities in Maban and supporting partners on page 2*). All facilities serving the refugees in Maban reported on time in week 28, while those serving the host communities were 12 out of 16 facilities.
- All the three health facilities serving Yida refugee camp reported on time this week.
- Malaria was the leading priority disease recorded in the refugee camps (56.1%), followed by Acute watery diarrhea (33.9%), AJS (6.8%), and Acute bloody diarrhea (3.2%).
- One hundred and seventy eight (178) suspected Acute Jaundice Syndrome (AJS) cases (or Hepatitis E cases) and 3 related deaths were recorded from Maban and Yida in week 28.
- No case was reported from the host community this week.
- Doro reported 49% of the cases, followed by Gendrassa 32.5%, kaya 14.7%, and Batil 3.8%.
- The cumulative AJS cases recorded from Maban refugee camps are 11,279 and 205 related deaths, while Yida has recorded 500 cases and 13 deaths.
- Three measles cases were reported this week, two from Batil and one from Gendrassa camps.
- Two cases of meningitis were reported this week from Kaya. One of these came from the host community.
- No cases of cholera, or viral haemorrhagic fever were reported this week.

## Reporting Performance

The total number of health facilities in Maban expected to report for *Early Warning and Alert Response Surveillance* (EWARS) system this week is 24. Of these, 16 serve the host community, eight serve refugee camps in Maban, and three serve Yida refugee camp. Three of the four silent health facilities serving the host community are operating but not reporting due to the long distance from Bunj town and lack of communication facilities.

## Epidemic Prone Disease Reported

### Acute Watery Diarrhea (AWD)

A total of 883 AWD cases were reported in Maban and Yida refugee camps during this reporting week with no related deaths. AWD accounted for 33.9% of the priority diseases reported this week. Proportion of cases below five years was at 65.1% of all reported AWD cases in all the camps. It was exactly the same proportion like that of the previous week.

Figure 1 shows a comparison of AWD cases reported by Epi-week in year 2012 -2013 from facilities serving the Refugees in Maban and Yida. The incidence rate of AWD in the camps of Maban remained almost the same but increased in Yida in week 28. The cases among the Host community in Maban increased to 181 from 105 the previous week with no related deaths.

### Dysentery (ABD)

A total of 82 cases of ABD with no related deaths were reported in week 28 from the refugee camps in Maban and Yida. This week recorded more cases compared to the previous week (70). Proportion of cases in children below five years increased to 52.4 from 45.7% the previous week. In the previous weeks samples were taken and a few were due to shigella.

Figure 2 above shows a comparison of ABD cases reported by Epi-week and year 2012 – 2013 in Maban and Yida camps. The ABD incidence reported from Yida increased this week. The ABD incidence among the host community in Maban decreased to 82 from 107 cases in the previous week.

## Malaria

Malaria incidence in Maban refugee camps this week increased (1170) compared to 1081 cases in the previous week with no related deaths. The incidence reduced in Yida this week. Out of all the cases, 16.9% were reported in children below five years of age in both Maban and Yida. In Maban County, 457 cases of malaria with no related deaths were reported from facilities serving the host community. Malaria cases in the host community decreased this week compared to those recorded in the previous week (503). The under 5 years old in the host community had a higher incidence of malaria (39.4%) than those in the refugee camps (16.9%). The incidence of malaria among children has for a long time been higher in the host community than in the refugee camps in Maban. On a good note for several weeks, cases of malaria among both refugee and host communities are fewer in children below five years of age than those above.

### Acute Jaundice Syndrome (AJS)

A total of one hundred and seventy eight (178) suspected Acute Jaundice Syndrome cases (or Hepatitis E cases) and three related deaths were recorded from Maban and Yida in week 28. (Figures 4 and 5 show AJS Epi-Curve in Maban and Yida). No case was reported from the host community this week. As shown in figure 4 and 5, cumulative AJS cases and related deaths recorded from Maban and Yida refugee camps were 11,279 and 205, and 500 and 13 respectively since the outbreak till week 28. New cases recorded in Maban refugee camps continued to present an irregular pattern for several weeks in a row. Compared to previous weeks, AJS/HEV cases from Batil have reduced remarkably since mid-February. Gendrassa and Doro are still reporting high numbers of AJS/HEV cases compared to the previous months. This week, cases from Doro increased again. More emphasis this week was again directed to improving hygiene and sanitation at house hold level and creating more awareness in the community. WASH crude indicators are good according to sphere and UNHCR standards. Hep E awareness is being stepped up in the community through schools, places of worship, women and youth groups, and social events. The pattern of the epidemic is unpredictable as upsurges and declines are irregular.

**Figure 4: Epi-Curve of Acute Jaundice Syndrome cases in the Refugee camps in Maban County (May 2012 - July 2013)**

**Figure 5: Epi-Curve of Acute Jaundice Syndrome cases in Yida Refugee Camp (Sept 2012 - July 2013)**

**Measles:** Three cases of suspected measles were reported this week. Two were from Batil and one from Gendrassa.

**Meningitis:** Two meningitis cases were reported in Kaya this week. One of them came from the host community

**Other Diseases:** No Cholera, Viral Hemorrhagic fever or Influenza like illness was reported during this week.

**Table 2: Summary of Priority Diseases in Maban week 28**

Camps	Doro		Batil		Gendrassa		kaya		Maban TOTAL		Yida		Yida TOTAL		Host Community
