This Indicator Report provides a monthly snapshot of the regional response to the South Sudan Situation. The indicators included report on the Post 15 December 2013 South Sudan caseload only. The report is prepared through collaboration with the reporting country and the Regional Support Hub, Nairobi.

The notes below provide further contextual information on various sector indicators:

#### EDUCATION

The school age population in Uganda is as follows:

Pre-primary: 3 - 5 years

Primary: 6 - 12 years

Secondary: 13 - 17 years

In Uganda primary education in public institutions is free of charge while fees are paid for secondary education.

#### SEXUAL AND GENDER BASED VIOLENCE

SGBV reporting among the South Sudanese population remains low with activities to increase sensitization and reporting ongoing across all hosting areas.

#### WATER, SANITATION AND HYGIENE

Figures are based on UNHCR's Water Monitoring System. As Uganda moves out of the initial emergency phase water yield is being monitored at every individual hand pump rather than taking an average to increase accuracy.

Water availability is calculated based on population figures of registered refugees in the settlements.

Reduction in Hygiene Promoters in Arua and Kiryandongo during the reporting month mainly due to funding issue especially with the funds for 2015 not received by IP/OP from their donors. Indications are that in March is when most partners will be financially solid and engage more Hygiene Promoters on the ground.

#### ENERGY

The Uganda operation is not currently funded to distribute domestic fuel to households.

#### NUTRITION

Both MAM and SAM recovery rates are below Sphere standards during this reporting period. The main reason is high defaulter rate, as most of the parents go out for different livelihood activities. Therefore community health workers are now tracing defaulters in the settlements, and a communication campaign has been put in place to emphasize the importance of nutrition services

#### SHELTER AND SITE

Uganda does not report on average dwelling floor size per person as the refugees build their own dwelling of various sizes on their own plot.

Uganda reports on plot area per person rather than camp area as the refugees live in settlements and not camps.
