SECTOR INDICATORS - KENYA

February 2015

This Indicator Report provides a monthly snapshot of the regional response to the South Sudan Situation. The indicators included report on the Post 15 December 2013 South Sudan caseload only. The report is prepared through collaboration with the reporting country and the Regional Support Hub, Nairobi.

The notes below provide further contextual information on various sector indicators:

POPULATION

Since the influx of Dec 2013, 29,300 SSD children have been received, making up over 64% of the total population received.

CHILD PROTECTION

Every week, the child protection data changes as new arrivals come in; some UAMS are later reunified with their families hence changing their status. This causes either a reduction or increase in number of UASC. As at end of February 2015 there were 2,753 registered UAMS and 12,070 separated children in Kakuma.

EDUCATION

In Kakuma the education coverage at all levels is very low: pre-primary are only 25% of eligible children (those aged between 3-5 years), primary education coverage for the age group of 6 –13 is at 65% and 2% for secondary education. Primary coverage has increased due to the completion of construction and renovation of 40 classrooms. There are only 4 secondary schools in the camp hence the low coverage.

SEXUAL AND GENDER BASED VIOLENCE

No SGBV cases were reported in January 2015. 115 survivors were supported through physical protection, shelter and nutritional support, cash assistance, provision of psychosocial counselling and NFIs.

WATER, SANITATION AND HYGIENE

On average, the per capita water distribution for SSD arrivals has been 17.6l/p/d. Latrine to user ration has been 1 to 17 individuals for the month.

HEALTH

The health status of refugees has remained consistently stable. Under-five Mortality Rate (U5MR) and Crude Mortality Rates (CMR) remained within UNHCR /Sphere standards (<1/10,000 /day and <2/10,000/day respectively).

ENERGY

Only 20% (4kgs) of the required ration of firewood (20kgs) is distributed to beneficiaries due to lack of sufficient firewood.

NUTRITION

During the month of February, 273 children under five years were screened for malnutrition at the reception center upon arrival, using weight for height. 20.5% (56 children) were classified as acutely malnourished, of which 37 were suffering of severe acute malnutrition.
