April developments

- UNHCR released its first quarterly health information system (HIS) report including data for half of all UNHCR supported facilities. The report cites 47,403 consultations for acute health conditions, 34% of which were for respiratory tract infection and 37% for children under 5 years. For chronic health conditions, asthma/COPD and hypertension were most commonly diagnosed. <http://data.unhcr.org/syrianrefugees/download.php?id=5659>
- UNHCR supported primary health care for nearly 26,000 patients in April. The top three reasons for consultations were for ante-natal care, respiratory tract infections, and routine child care.
- UNHCR further expanded its hospital network this month to include a total of 64 hospitals. Over 5,000 people received life-saving care and support nearly half of which were deliveries.

Achievements: January - April

Activity	reached January-April	2014 Target
Primary health care (including reproductive and mental health)	100,298	240,000
Life-saving referral healthcare	16,973	60,000
Health education	135,778	700,000

Needs

As a consequence of the violence in Syria and the destruction of public infrastructure, many refugees arrive in Lebanon with health conditions that require immediate attention. Others have developed health problems during displacement related to trauma and substandard living conditions. Common health care needs of refugees include: reproductive health care and family planning, child health care (i.e. vaccinations), treatment for acute illnesses (respiratory infections, gastrointestinal diseases), chronic diseases (hypertension, diabetes) and mental health. In light of their limited financial resources, refugees need support in accessing primary, secondary and tertiary health care within the public and private health care systems.

Challenges

Refugees are facing difficulties in getting health care

services: Physical access to health care centres is a challenge for some refugees who live in remote locations. In addition, access is limited by short working hours and availability of trained health personnel. Visits of mobile medical units are in place to address this obstacle, but providing coverage in all areas remains a challenge. UNHCR's existing network of 30 primary health care centres needs strengthening in order to offer comprehensive services and adequate follow-up for chronic conditions.

High cost of health care:

Refugees are charged the same medical fees as Lebanese nationals. Despite contributions by UNHCR and other partners in health centers supported by the humanitarian community, many refugees still find it difficult to cover the costs of medical treatment. In addition, medications and diagnostic tests are frequently overprescribed; increasing costs for refugees and thereby UNHCR. Moreover, some providers require upfront payment of costs that not covered by UNHCR.

Need for health care exceed available resources: With the daily increase in the number of refugees, UNHCR resources are unable to meet all health care needs. Funds are increasingly stretched among prioritized and vulnerable cases, particularly at secondary and tertiary care levels. Lifesaving interventions in the area of maternal and infant health (caesarean deliveries and care of premature infants) are very costly.

Strategy

The role of UNHCR vis-à-vis refugee health is to facilitate, monitor, and advocate for refugee access to health care services in Lebanon.

- **Primary Health Care:**

UNHCR supports a network of primary health care centres, which serve as the entry point for refugees needing medical care. Through its partners, UNHCR covers most of consultation fees for all refugees and 85% of the cost of diagnostic procedures for select groups (including pregnant women, children under 5 and adults over 65 years). In addition, UNHCR is working to expand the existing network of mobile medical units to ensure free of charge access to the most vulnerable refugees and those living in remote locations. UNHCR prioritizes essential services for those most in need, especially reproductive healthcare, services for infants and young children (including immunizations and adequate infant and young child feeding), and mental health care services. By improving access to primary health care UNHCR aims to minimize the need for secondary health care.

- **Secondary and Tertiary Health Care:**

UNHCR supports secondary and tertiary health care in life-saving and emergency situations only. 75% of all emergency life-saving care and cost of delivery are covered. Moreover, UNHCR has established an exceptional care committee to review exceptional cases basing decisions on prognosis, treatment plan and cost criteria.
