

Danger

Heaters can spread dangerous levels of the poisonous Carbon Monoxide gas causing **sickness and death**

Carbon Monoxide

Carbon Monoxide has no color, odor or taste

Carbon Monoxide poisoning occurs when you breathe in even small amounts of the gas

Carbon Monoxide gets into your blood stream and prevents your red blood cells from carrying oxygen. Without oxygen, your body tissue and cells die

Levels of carbon monoxide that do not kill can cause serious harm to health when breathed in over a long period of time

For the safety of you and your family

Make sure that the appliances such as cookers and heaters, are properly ventilated.

Make sure that the vent is not blocked, separated, rusted, or corroded.
