The Geographical HUB Focal Point is a Case Management agency which acts as focal point for referrals of CP/SGBV cases from other agencies within a specific geographical area. Their role is (but not limited to) to receiving Referrals from agencies not providing CP/SGBV Case Management and/or prevention, and coordinate the immediate response from the most appropriate CP or SGBV agency.

The Geographical HUB focal Point is not the only Case Management agency operating within the specific geographical area.

The Geographical HUB Focal Point is not necessarily having a physical presence in all the Caza falling within the HUB, nevertheless, they are able to provide case management directly or in coordination with other case management actors in the area, to any case identified.
