

Key Findings of VARON 2017

(Vulnerability Assessment of Refugees of Other Nationalities in Lebanon)

UNHCR
The UN Refugee Agency

UNHCR is pleased to present the Vulnerability Assessment of Refugees of Other Nationalities (VARON) 2017, an annual report on Iraqi, Sudanese, Ethiopian and other refugees and asylum-seekers in Lebanon from countries other than Syria. The influx of more than a million refugees from Syria since 2012 has partly overshadowed the plight of other refugee communities, many of whom have been in Lebanon since before the Syrian crisis. The VARON aims to shed light on their situation. Between November 2016 and April 2017, assessments were conducted with all reachable refugees and asylum-seekers from countries other than Syria (4,876 households).

Note: The demographics and vulnerabilities of the studied households differed significantly along nationality lines. For this reason, the report splits findings between Iraqi respondents and respondents from other countries such as Sudan, Ethiopia and Egypt (referred to in this dashboard as 'refugees of Other Nationalities' for concision). A complete list of nationalities included in the 'Other Nationalities' group can be found in the full report, available on the Data Portal or at this [link](#).

DEMOGRAPHICS

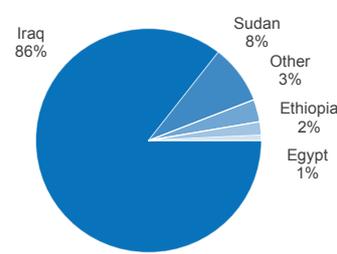

21,761 refugees and asylum-seekers from countries other than Syria were registered with UNHCR as of January 2017.

Iraqis tend to live in family units of three or more people (71%), while most refugees and asylum-seekers of Other Nationalities are single men and women (64%).

Age and gender distribution (ProGres registration data, Dec 2016)

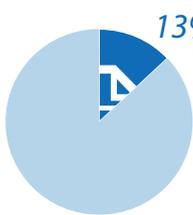

Countries of origin

Distribution by governorate

LEGAL RESIDENCY

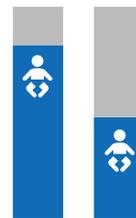

13% of individuals over 15 years old reported having legal residency

Only 13% of individuals over 15 years old reported having legal residency. Furthermore, the share of households in which no member had a residency permit grew steeply from 30% last year to 80% this year, indicating that those holding residency last year did not renew it or new arrivals had not secured residency.

BIRTH REGISTRATION

82% of Iraqi parents reported registering their child's birth

48% of Other Nationalities parents reported registering their child's birth

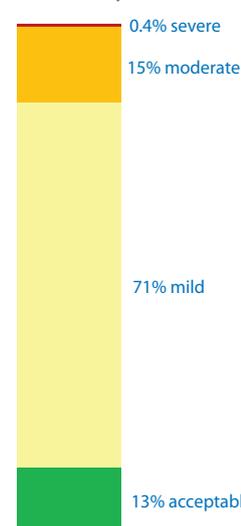

Iraqis were much more likely to register their child's birth than refugees of Other Nationalities, although the questionnaire did not specify the level of registration. Without birth registration, refugees risk becoming stateless.

FOOD SECURITY

87% of households presented some degree of food insecurity. WFP does not provide Cash for Food assistance to refugees from countries other than Syria, and UNHCR stopped providing food assistance to this group in March 2017 due to lack of funds. While most households are eating an adequate quantity and variety of food, the coping strategies they are adopting in order to do so are concerning.

Respondents from 200 households said they did not eat for at least one day in the last seven

Food Security Index

66% of households reduced expenditure on health and education to cope with lack of food or money to buy it. 49% spent their savings, 42% bought food on credit and 35% sold household goods.

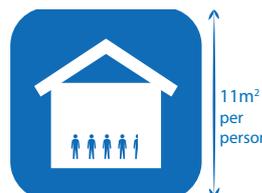

SHELTER CONDITIONS

Shelter conditions remain inadequate for many. Refugees of Other Nationalities were particularly at risk, with over a quarter living in shelters that were overcrowded, dangerous or in urgent need of repair (27%, compared to 12% for Iraqi households).

21 surveyed households were homeless

IRAQI

People sharing living space: 4.6
Number of rooms: 2.2
Number of toilets: 0.8

7% in urgent need of repair
8% dangerous conditions

OTHER NATIONALITIES

People sharing living space: 2.7
Number of rooms: 1.3
Number of toilets: 0.9

18% in urgent need of repair
18% dangerous conditions

Key Findings of VARON 2017

WATER AND SANITATION

A large majority of households (90%) had access to cleaning items and 89% had access to personal hygiene items.

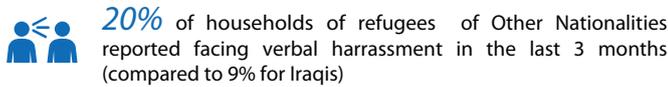

Female-headed households tended to have less access to water, with only 62% reporting having enough water for drinking and domestic use, compared to 79% of male-headed households.

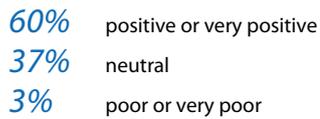

1 in 5 households with females reported no access to female hygiene items.

SOCIAL STABILITY

Refugee–host community relations were mixed and continue to be more difficult for refugees of Other Nationalities.

Relations with the host community according to respondents

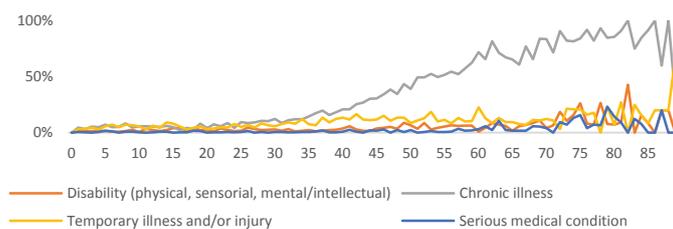

Those interacting *daily or regularly* with the host community generally enjoyed better relations: 98% of this group reported positive or very positive interactions, compared to 11% of those who interacted *rarely or never*.

SPECIFIC NEEDS

More than half (53%) of all households reported having at least one member with specific needs. There was no notable difference between men, women, Iraqi and Other Nationalities households in terms of specific needs.

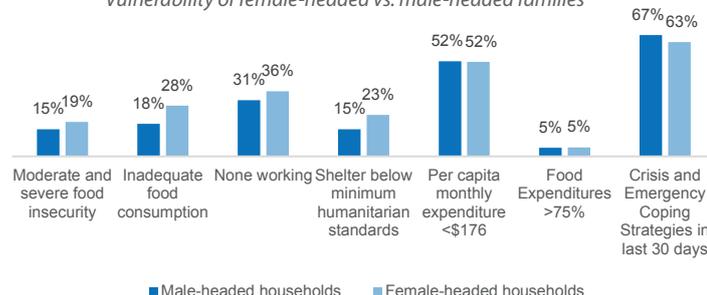

Percentage of individuals suffering from specific needs by age

GENDER DIMENSIONS OF VULNERABILITY

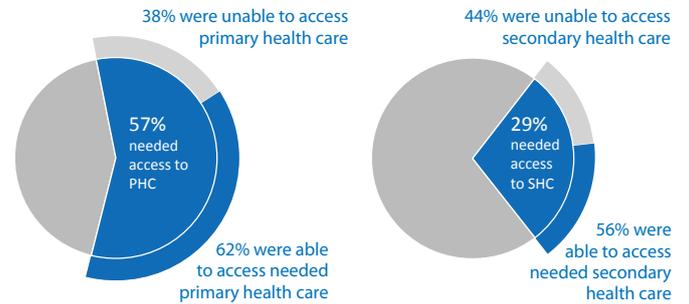

Female-headed households fared worse than their male counterparts on many indicators of vulnerability, although male-headed households had greater recourse to crisis and emergency coping strategies.

Vulnerability of female-headed vs. male-headed families

HEALTH CARE

Access to primary and secondary health care

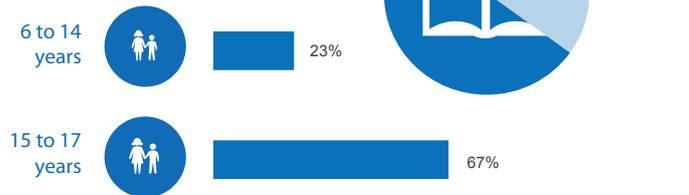

The most reported reason for not being able to access primary and secondary health care was cost of treatment or medication.

EDUCATION

School attendance remains very poor, particularly among 15 to 17 year olds.

School non-attendance by age group

School attendance improved since 2016, when the VARON found 36% of primary and 73% of secondary school age children were out of school.

INCOME AND EXPENDITURE

\$227 average reported expenditure per person per month

Minimum Expenditure Basket (MEB)¹
(poverty line)

living above the MEB **48%** / **52%** living below the MEB

¹ Expenditure 'baskets' serve as benchmarks to estimate what vulnerable families would require to purchase goods and services from local markets in order to meet basic needs at either survival or minimum levels. The MEB for non-Syrian refugees and asylum-seekers is US\$ 176 per person per month.

² Based on the question "In the last 30 days, what was the total income of all the household members".
