¹Actual capacity is calculated as the subtraction of current places minus 14.5% which is this week's estimated average natural loss for mainland and 4% for islands. Natural loss is the number of places that cannot currently be used because of damages/repairs, protection issues, family size, etc. The formula applies to all type of accommodation. Actual capacity is a close estimate of available places to be used as reference.

²Occupancy rate is calculated as the percentage of current population over actual capacity.

The actual available capacity is estimated to be at 684 places (mainland: 519 / islands: 165).

As of today 255 places have been reserved for planned transfers.

Considering an average natural loss (10-15%) the estimated remaining available places are 396 (mainland: 270 / islands: 126)
