¹Actual capacity is calculated as the subtraction of current places minus 15.5% which is this week's estimated average natural loss for mainland and 6% for islands. Natural loss is the number of places that cannot currently be used because of damages/repairs, protection issues, family size, etc. The formula applies to all type of accommodation. Actual capacity is a close estimate of available places to be used as reference.

²Occupancy rate is calculated as the percentage of current population over actual capacity.

The actual available capacity is estimated to be at 381 places (mainland: 217 / islands: 164).

As of today 144 places have been reserved for planned transfers (mainland: 119 / islands: 25).

Considering an average natural loss (10-15%) the estimated remaining available places are 219 (mainland: 82 / islands: 137)
