

KEY FIGURES

245,000 Syrian Refugees expected by end-2018

250,184 currently registered

14 million (6% of total) required for Health

10% Received

HIGHLIGHTS

- A total of **19,971 patient consultations** were provided to Syrian refugees living in KR-I, out of which **19,664** consultations were made through camp-based Primary Health Care Centers (PHCC) ran by the Directorate of Health (DOH) with support from UN agencies, and the remaining 307 consultations for non-camp refugees through Mobile Medical Units ran by international and national NGOs. Among camp-based consultations, **400** of them were related to mental health and psychosocial support.

- 1,393 patients** were referred from camp PHCCs to secondary and tertiary health facilities in urban areas for further investigations and/or hospitalization.

- Preventive health services** (immunization, growth monitoring, antenatal care, family planning) were provided in refugee camps by DOH with support from UN agencies.

- UNICEF provided **Infant and Young Child Feeding** counselling assistance on appropriate breastfeeding to **1,910 pregnant and lactating women**.

- Antenatal care** and family planning services are available in all camps. They are provided by DOH with the support of UNFPA. **90 women** attended one or more antenatal care sessions in the nine refugee camps.

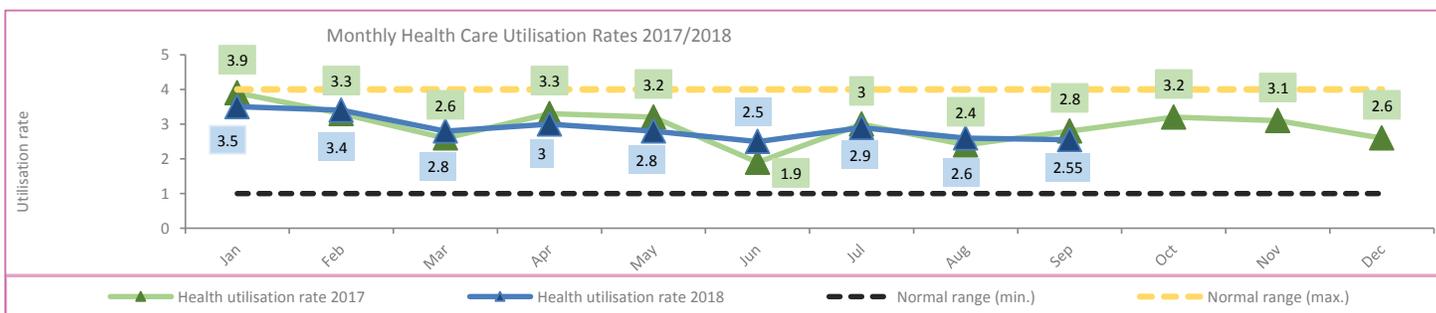

- UNICEF provided **Infant and Young Child Feeding** counselling assistance on appropriate breastfeeding to **1,561 pregnant and lactating women**.

NEEDS ANALYSIS

- Shortage of Medicines to treat chronic diseases, particularly in Erbil Governorate, and lack of human resources in public health facilities due to the ongoing financial crises in KR-I.

- Lack of awareness on available health services at governmental health facilities for non-camp refugees.

- Reduced electricity supply to Primary Health Care Centers (PHCC) in camps may affect the quality of medical services provided to Syrian refugees.
