

Individual Refugee Profiling

31 January, 2020

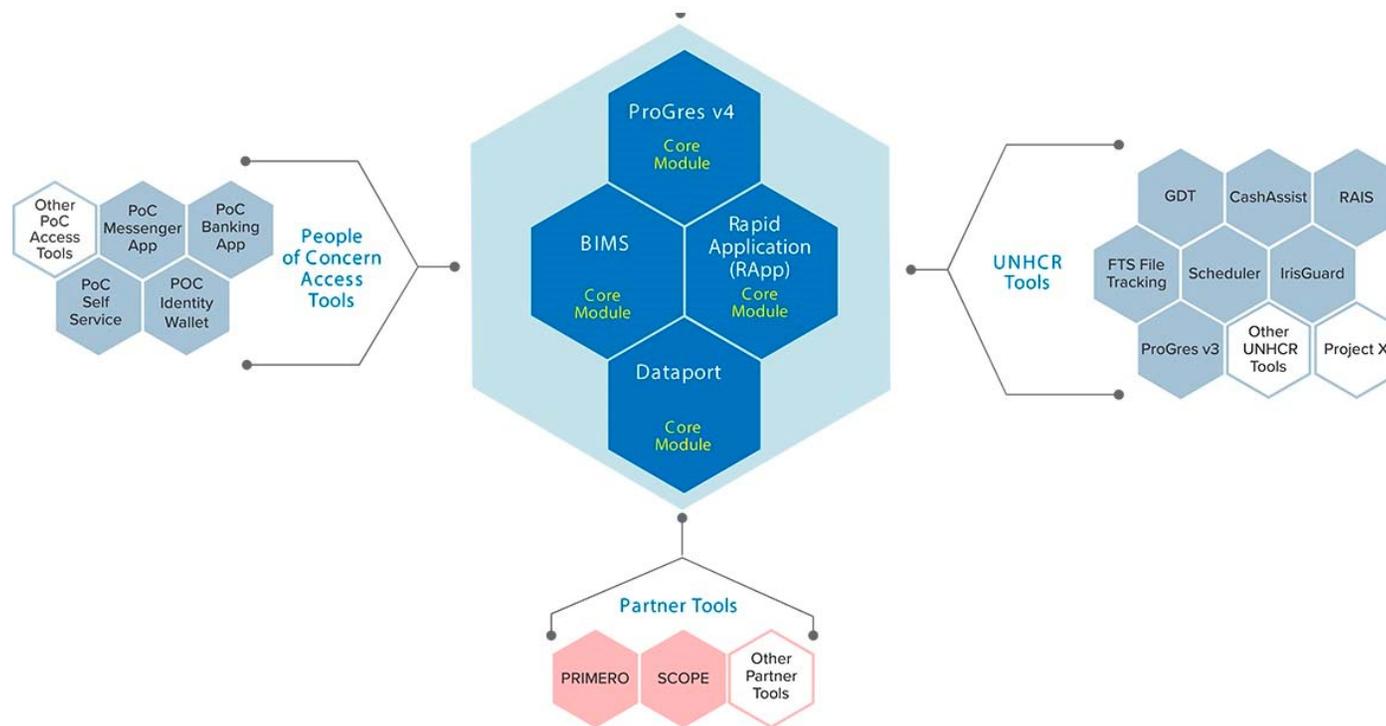

Background

- **Verification** – in 2018, transitioning RIMS to proGres V4 supporting registration, assistance, profiling and case management.
- **Data set captured** - only key preliminary data captured during verification
- **Data collection** - Various data collection exercises are ongoing across the Uganda operation for different purposes. This data collection is not harmonized or centralized.

One Database for Refugees

UNHCR PRIMES

(Population Registration and Identity Management EcoSystem)

Objectives

- To **minimize costly repeated data collection exercises**, and related **refugee fatigue**
- To allow a **comprehensive, evidence-based understanding of the refugee population** to enable the implementation of the basic needs approach
- To **verify the existing specific needs in ProGres V4** and identify any new individuals with specific needs for access and usage by all protection actors.
- To analyze data present to **attract private sector investments in refugee-hosting districts** and connect refugees to employment and business opportunities.

... Objectives

- To **strengthening of referral mechanisms** to appropriate service providers during data collection.
- To **support the update of household compositions**, allowing referrals to OPM for updates.
- To **collect key sector specific indicators** that will allow evidence-based programming at the sectorial level.
- To provide **comprehensive profiles in ProGres V4** - will allow further analysis for inclusion/exclusion errors from statistical models aimed at targeting prior to implementation.
- To **include refugees** in poverty reduction and social protection programmes beyond cash programmes

Approach

a) **Establish a primary dataset** – by building on PSN verification exercises.

Piloted in Kyangwali and Kiryadongo in 2019

- create a **comprehensive questionnaire** with individualized sectorial data
- Expand scope of **enumerator training**
- Avail **PSN data** based on data sharing protocols

... Approach

Questionnaire modules

- Registration
- Shelter
- Education
- Protection
- Livelihoods
- Health
- Nutrition and Food Security
- Energy and Environment

... Approach

- Interagency approach
- 10 settlements to be targeted + Kampala
- 2 – 10 weeks of data collection
- Dedicated enumerators
- Simultaneous/separate data collection

Recording Interventions

Should be recorded as part of case management and/or assistance provided by partners:-

- Intervention decision - Eligibility based on a given criteria
- Intervention delivery - to be tracked at HH/Individual level
- Intervention decision cancelation – should be communicated

Data Maintenance

Specific Needs

- **Identification** - Potential PSNs should be identified and referred for an assessment to relevant partners
- **Follow up** - Any follow-up action should be recorded in ProGres V4 as part of the case management module wherever feasible.
- **Inactivation** - It will be effected upon confirmation that a specific need is no longer applicable

...Data Maintenance

Individual Profiles

- **Triggered** - Profiles could be affected by continuous registration activities which will trigger an update as the family composition change affects the vulnerability level.
- **Expired** - The data collected will have a shelf-life, if not updated during that period those profiles should be queued for update.
- **New Profiles** - All newly registered individuals should be profiled after registration.

Data Quality

- Well defined data quality measures will be detailed to ensure completeness, correctness, integrity and consistency of the collected data before uploading it to ProGres V4.
- ProGres V4 database maintains field level audit history to ensure that all updates are tracked and validated.

Activities

- Consultation with stakeholders – *ongoing*
- Review of questionnaire (based on partner/UBOS feedback) - *ongoing*
- Resource mobilization (Data collection plans, feedback from the partners on available resources) – *on going*
- Information campaign
- Training – recruitment, enumerators, team leaders
- Data collection and quality monitoring
- Data linkage/upload
- Data analysis
- Reporting
