

Shelter and Settlements Dashboard

Uganda Refugee Response Plan (RRP) 2022 - 2023

Quarter 3

Jan - Sep 2022

Overview

Top 3 Sector achievements in Q3 2022

A - 100% of newly arrived refugee families received NFIs

B - 5, 073 refugee families provided with emergency shelter kits upon plot allocation

C - 498 PSN households assisted with semi permanent shelter

The primary objective of the sector is to ensure comprehensive settlement planning, to enhance a conducive environment for socio-economic transformation, and resilience in all refugee settlements and hosting communities. In 2022, this is supposed to be achieved through construction of roads, upgrading of reception facilities, rehabilitating, and maintaining projects through a project management approach. This is in addition to developing comprehensive physical plans, and demarcating land for shelter, livelihood, institutional use, common spaces, and buffer zones.

As mandated, the sector ensures refugees receive appropriate and timely assistance in line with the sector strategy. This includes shelter kits, to enable them construct their emergency houses, with the intention of upgrading them to semi-permanent structures as well as non-food item (NFI) support in line with the minimum agreed standards for Uganda. The sector, through direct labour and technical support, continues to ensure semi-permanent shelters are constructed for persons with specific needs, using market and community-based approaches. This is done once land is identified, assessed for suitability, plots demarcated and allocated to households.

A key objective for the sector is to ensure that, shelter options blend in with host communities. Therefore, it continues to push for the implementation of a revised shelter strategy, that considers more environmentally sustainable, culturally sensitive, and flexible designs. In addition, a key approach throughout the settlements is the continued establishment of settlement planning guidelines.

Sector Achievements

With increased influx of refugees in the third quarter, 5,073 refugee households received emergency shelter kits upon plot allocation (486 for SSD, 3,954 for DRC and 662 others), in anticipation that this will be upgraded to semi-permanent structures, in line with shelter strategy. Despite UNHCR's limited support for shelter since 2019, partners have continued to support extremely vulnerable households, with semi-permanent shelters. A total of 498 PSNs, were supported with semi-permanent shelters.

Challenges

Without shelter partners from 2019 to date, there has remained a big gap and challenge in provision PSN shelter across the operation. Very few PSNs were supported due to limited funds, in a competing environment among the partners.

Regarding roads infrastructure in settlements, out of planned 552 km of roads in 2022, no single kilometre of road has been rehabilitated and maintained in Q3, due to limited funding and competing priorities. This has continued to constrain easy mobility of goods and services across the settlements.

Key priorities

- Roads in the settlements remain impassable, making movement of goods and services problematic. It therefore remains a priority for the sector.
- Continuous provision of emergency shelter kit to refugee families upon plot demarcation and allocation, to ensure minimum shelter achievement.
- Upgrading of temporary communal shelters at reception and transit facilities, into permanent shelters.
- Systematic plot demarcation for both shelter and livelihoods, to ensure sustainable settlement development.

Key indicators

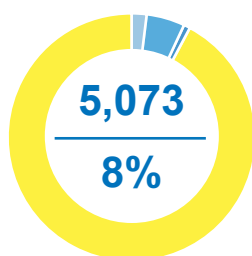

Achievements per quarter

Q1

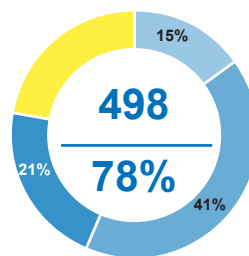

Q2

Q3

annual target

Refugee households provided with the minimum shelter support
Target: 67,000

Refugee households with Specific needs assisted with semi-permanent shelters
Target: 640 HH

OUTCOME: Ensure the minimum shelter standards for all refugees are met

Indicator	Actual	Target (2022)	Actual against annual target
New arrival Households receiving emergency shelter support			
- Congolese refugees	3,954	30,000	13%
- South Sudanese refugees	486	20,000	2%
- Other refugees	662	17,000	2%
