

# Ukraine: Collective Site Monitoring (CSM)

Round 4: October 2022

## Methodology

The Collective Site Monitoring (CSM) is an initiative of the Camp Coordination and Camp Management (CCCM) Cluster, implemented by REACH and supported by cluster members.

Data is collected through a combination of in-person and remote interviews. At the end of May 2022, the CCCM Cluster, with support of REACH, United Nations High Commissioner for Refugees, International Organisation for Migration, ACTED, Norwegian Refugee Council and other partners compiled a list of collective sites (CSs) across Ukraine, which by the end of October 2022 contained 7,239 of them. Following the baseline mapping, monthly data collection cycles were initiated.

The CSM questionnaire is multi-sectoral and aims at informing a wide range of partners with basic information on key sectoral indicators.

This report focuses specifically on the findings made in Round 4 of the assessment. Data collection took place from 3 to 16 October 2022. In total, 1,346 sites were assessed as part of the CSM Round 4. Interviews took place with site management officials acting as Key Informants (KIs). The sites were sampled purposively, thus findings should be read as indicative rather than representative.

### Coverage per oblast, October 2022

Dnipropetrovska	174	Rivnenska	69	Ternopil'ska	48
L'vivska	142	Zaporizka	62	Kharkiv'ska	44
Zakarpatska	119	Vinnytska	60	Zhytomyrska	16
Chernivetska	108	Ivano-Frankiv'ska	59	Kyiv'ska	15
Poltavska	99	Khmelnytska	55	Mykolaiv'ska	10
Kirovohrad'ska	79	Cherkaska	53	Chernihiv'ska	10
Odeska	70	Volyn'ska	49	Sumska	5

**LIMITATIONS OF METHODOLOGY:** 1058 CSs assessed during Round 4 were surveyed with a shortened version of the CSM questionnaire (with focus on demography, vulnerabilities, IDPs movement intentions, and top priority needs of the site).

Distribution of the assessed sites does not reflect the actual distribution of them across Ukraine. The current coverage relies on partners' contributions and assistance in conducting the research. There is still low coverage in Zhytomyrska, Chernihiv'ska, Mykolaiv'ska, Sumska, and Kyiv'ska oblasts, therefore the data is not fully representative of the situation in all of Ukraine.

## Summary of Findings

Out of 1,346 assessed sites, 1,111 (83%) were actively hosting IDPs, while 235 (17%) were empty but ready to host them. Sixty percent of the assessed collective sites were established in educational premises (i.e., schools, kindergartens and dormitories). More than half (67%) of the CSs reported being able to perform the original function of the building while hosting IDPs. The site managers also reported that the residing IDPs were charged for staying (8%) and/or utilities (7%).

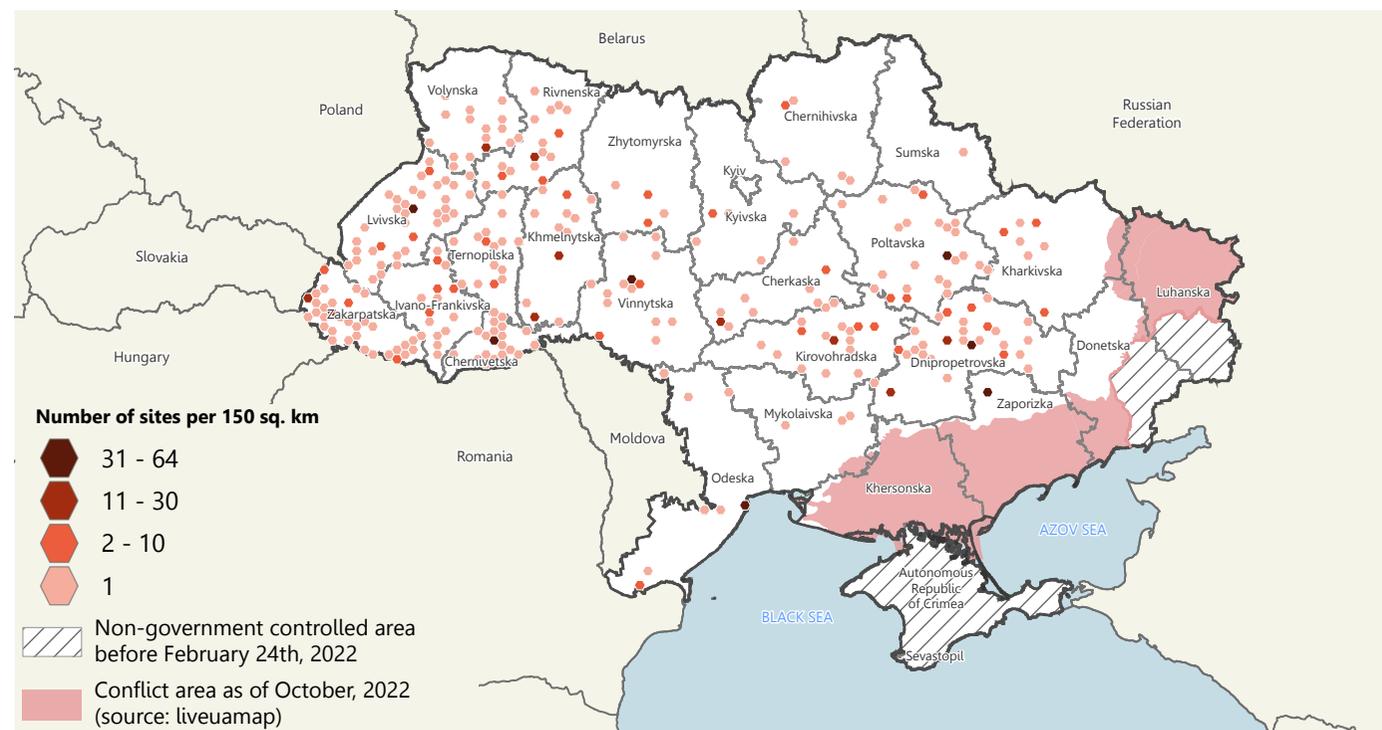

Older adults, female-headed households, and people with serious medical conditions were reportedly the most frequent vulnerable populations present at the CSs. Few unaccompanied children cases were reported by KIs, mostly in Zaporizka (8%) and Chernivetska (6%) oblasts.

Fifty-five percent of the CSs declared not receiving humanitarian assistance in the last 14 days prior to the data collection.

In particular, it was reported by site managers in Odeska (77%) and Khmelnytska (55%) oblasts, where the indicated proportion of CSs reported not receiving any assistance during the mentioned period.

Food products (58%), hygiene items (54%), sleeping items (26%) and cooking items (13%) remained the most frequent type of aid the CSs reportedly received. Nearly all other types of assistance were reportedly received by less than 10% of the CSs. In turn, food products (32%), bed mattresses (30%) and kitchen support (30%) were among the most urgent reported needs. Generators were reported by 21% of the KIs, which is higher than the proportion in R1 (6%), R2 (12%) and R3 (9%).<sup>1</sup> This increase may be explained by the power cuts after strikes on plants in many regions of Ukraine.

Map 1: Heatmap indicating the density of mapped collective sites per 150 sq. km across Ukraine (October 2022)

1. Comparisons of indicators over different CSM rounds should be considered as indicative only.

### Status of the assessed collective sites

**58,399** Individuals were reportedly staying in the assessed collective sites on the day of data collection.<sup>2</sup>

**118,671** Reported overall capacity of monitored sites.<sup>2</sup>

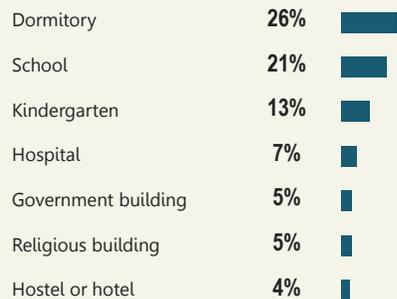

**63%** (n=288) of the CSs reported that the usual duration of IDPs' stay at the CSs was more than 3 months. Additionally, 56% of the CSs reported that none of the IDPs were planning to leave the site within 2 weeks.

**11%** (n=1,111) of the CSs reportedly provided assistance to IDPs who did not live in the site.

#### Collective sites by the ownership type (n=288):<sup>3</sup>

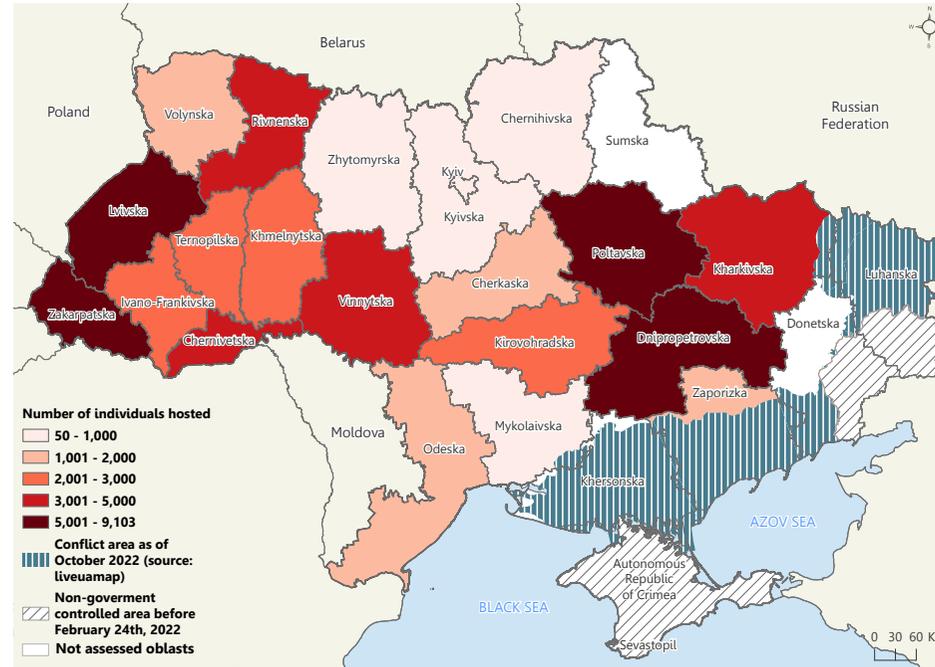

#### Type of premise used as a collective site (n=288):

**91%** of the CSs (n=288) reported that the managing organisation had a focal point present at the site permanently (24/7 or during working hours) or periodically.

Map 2: Number of IDPs hosted in sites monitored over October 2022, per oblast

### Demography

Overall **16,251 households (HHs)** were staying in assessed collective sites (n=675). Thirty two percent of active CSs hosted up to 20 residents, 39% and 16% hosted from 21 to 60 residents and from 61 to 100 residents, respectively. Only 13% of active sites hosted more than 100 IDPs.

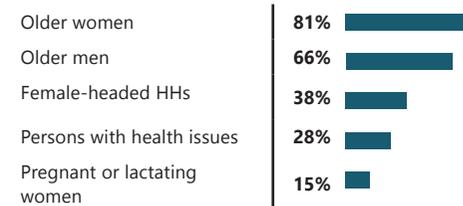

Reportedly, 24% of the population hosted in sites were children between 0-17 years old (n=1,111). Children population was relatively larger compared to adult population in sites of Ivano Frankivska (31%), Kyivska (30%) and Lvivska (30%) oblasts.

The oblasts with the **highest number of IDPs** staying in collective sites at the time of data collection were **Dnipropetrovska, Lvivska, Poltavska** and **Zakarpatska** (Map 2). Nearly 50% of the hosted population were in sites located in these oblasts.

### Vulnerable Populations

**89%** of the CSs reported the presence of at least one vulnerable group in the CSs assessed.

Most reported vulnerable groups staying in the CSs:<sup>4</sup>

The lack of elevators, external ramps, horizontal bars on doors, other devices for **older persons and persons with disabilities** were most frequently reported in **Kyivska** (71%), **Ternopil'ska** (50%), **Lvivska** (45%) and **Kharkiv'ska** (45%) oblasts.

### Protection

**39%** of the CSs reported not having a referral system in place through which persons at risk or affected by protection concerns can seek support.

**45%** of the CSs indicated social workers (from non-governmental organizations or the government) do not visit the site. Of those sites that reported visits (47%), the majority (55%) reported monthly visits upon request.

**39%** of the CSs reported that psycho-social services were not available for adult residents.

**43%** of the CSs reported that there was no possibility to report gender-based violence and human trafficking incidents in the site due to the lack of a respective mechanism.

### Movement Intentions

**56%** of the CSs reported that, to their knowledge, **no IDPs were planning to move** out of the center during the two weeks following data collection.

**54%** of those CSs reported that IDPs considering to leave in two weeks would reportedly **return home**.

**10%** of the CSs indicated that there were IDPs that **had been asked to leave** the site during two weeks prior to data collection.

The main reasons for forced eviction (51% of the mentioned 10%) were **unacceptable behaviour** and **relocation to another CS**.

2. Number of IDPs staying in the site and its capacity were only available for a subset of sites (1111 and 1337 sites, respectively) and therefore do not reflect the situation in all 1346 sites part of the CSM survey Round 4.

3. Collective site ownership includes: Public (state ownership), Private, Communal (ownership of territorial communities – property that is used for the common needs of the community and managed by the relevant local governments).

4. Multiple responses permitted. The sum might be different from 100%.

### Site Environment and Shelter

**17%** of the CSs sites reported that the building's electricity capacity is not sufficient given the current consumption.

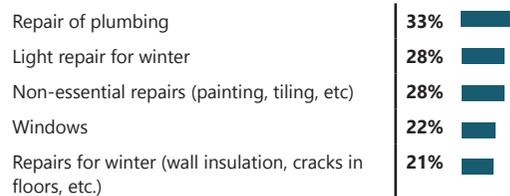

**27%** of the CSs reported insufficient number of plugs for the current number of residents.

**45%** of the CSs reported being concerned with the heating system in sites. The lack of finance (44%), lack of fuel (39%) and lack of alternative source (29%) were the main reasons for concerns regarding heating, reported by the CSs managers.

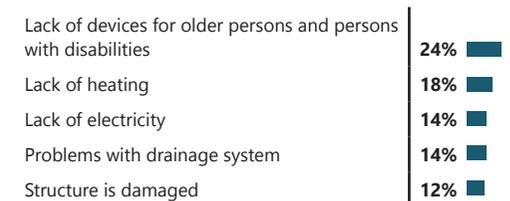

**76%** of the CSs informed that there were no lockers available in the site for the residents to store their belongings and documents.

**22%** of the CSs informed that there were no wifi connection available for residents of the sites.

**69%** of the CSs reported the need to repair the site infrastructure. The frequency of mentioned needs was the following:<sup>5</sup>

A similar proportion (**55%**) of the CSs reported one or more of the following shelter issues with regard to the infrastructure. Among the most frequent issues were:<sup>5</sup>

### Food Security and Cooking

**60%** of the CSs reported that IDPs hosted have to buy food for themselves.

**10%** of the CSs reported a lack of kitchen facilities or not having full kitchens.

**59%** of the CSs' managers reported a **deficit of microwaves** in the site.

**66% of the CSs reportedly needed food products. Canned fish and meat**, as well as **fresh or frozen meat** and **staples** were the most frequently reported types of food products needed.

Specifically, **59%** of the CSs reportedly **needed baby food products**, such as juice, vegetables and fruits. This proportion seemed to be higher than in Round 3 (26%).

### Urgent Humanitarian Needs

Only **42%** of the CSs' managers reported receiving humanitarian assistance during 14 days prior to the data collection. The most reported types of aid received were **food products (58%), hygiene items (54%), and sleeping items (26%)**

In turn, the KIs reported **food products (32%), kitchen support (30%), beds and mattresses (30%),** as well as **washing or drying machines (23%)** and **cleaning materials (23%)** as urgent needs most frequently (Map 3).

Other urgent needs were reported by the following proportions of the CSs:<sup>5</sup>

Food products, as well as kitchen support, beds and mattresses appeared to be among top three urgent in line with the results from Round 3. In contrast, the proportion of sites that received sleeping items as humanitarian assistance appeared to have decreased from 26% in Round 3 to 22% in Round 4.

### Water, Sanitation and Hygiene

**18%** of the CSs reported not having bathing facilities available. Of those which did, **63%** indicated that the baths were **not separated by gender**.

**33%** of the CSs reported an **insufficient number of showers/baths** for the current level of occupation.

**20%** of the CSs indicated an insufficient number of toilets for the current population of the site.

**67%** of the CSs reported the need for hygiene (personal care) items. The most frequent categories were toilet paper (**95%**), shampoo (**92%**), tooth paste (**84%**) and towels (**84%**).

**57%** of the CSs reported the tap water as the main source of drinking water in sites.

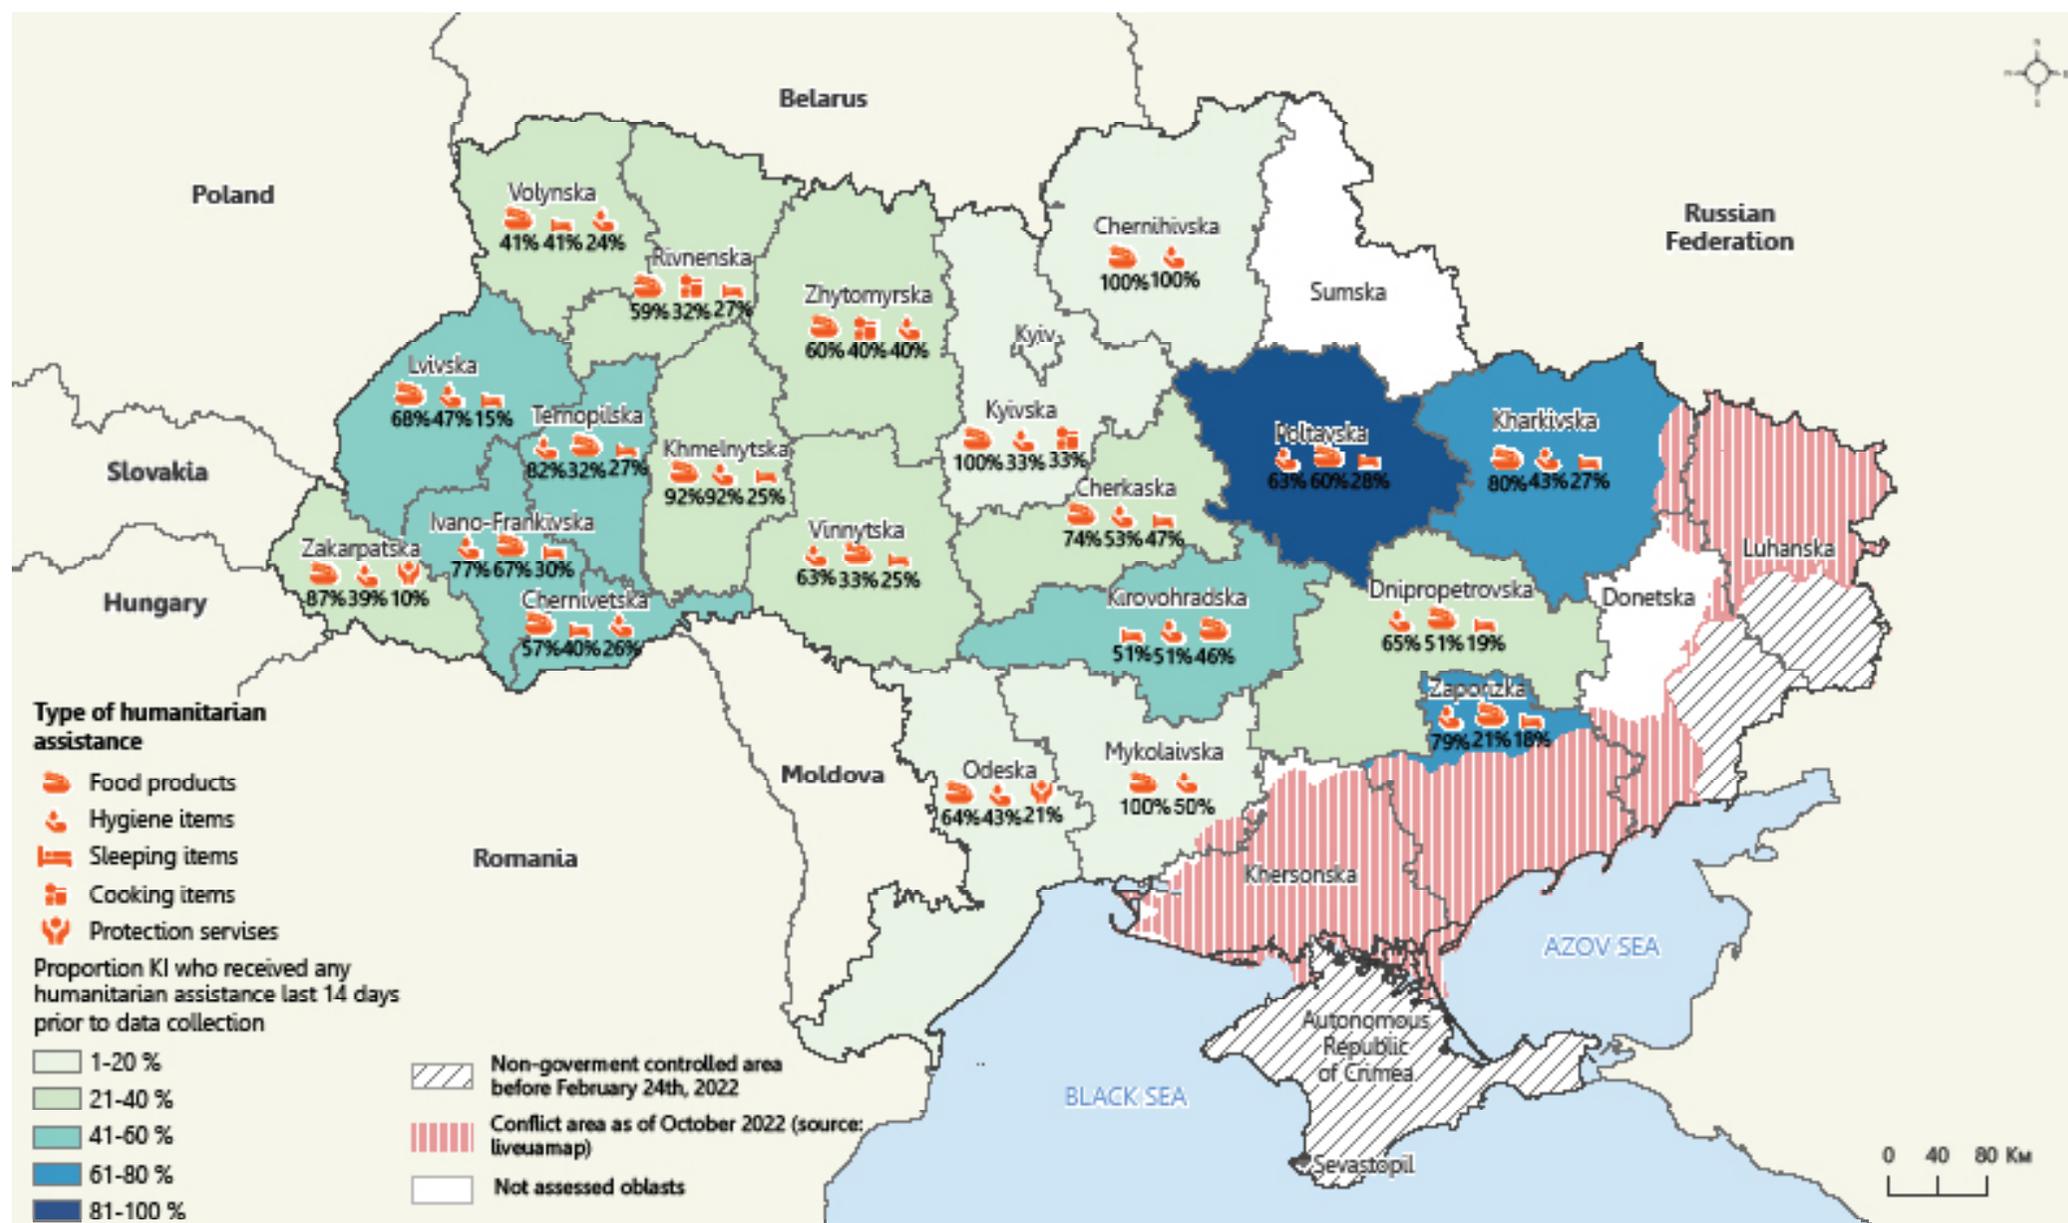

The site managers also pointed out the total absence of washing (**20%**) and drying (**83%**) machines in the sites.

### PARTNERS

5. Multiple responses permitted. The sum might be different from 100%.

### Proportions of sites that reported receiving humanitarian assistance, by results of the CSM Round 4:<sup>6</sup>

6. An overview on % of the sites that received any humanitarian assistance in the last 14 days before data collection in October 2022 and the types of assistance received per oblast. Multiple responses were permitted, thus the sum might exceed 100%.

### The most urgent needs according to the site managers, by results of the CSM Round 4:<sup>7</sup>

7. KIs were asked to select top three urgent needs in the site, hence needs per oblast were recalculated selecting the most frequently reported categories.
