The Increase in IDPs and Sites represents not only the new displacements happening due to the recent ongoing conflict in some areas, But also due the revealing of sites that were hard-to-reach areas or conflict zones that recently identified, also to the increase of CCCM Partners which allowed scanning more governorates.

Estimated Gaps of Services in Sites

As the cluster had in 2022 the site reporting tool data for around 66% of the sites running on a quarterly basis, using that we could see that the gaps are getting better slightly for some sites (covered sites) despite all, but as the needs and gaps are arising more and more for uncovered sites, the situation gets worse for some sectors.

**March 2022** The CCCM cluster with the help of REACH, had prepared a flooding risk analysis for the IDPs sites in Yemen using (2D HEC-RAS Depth and hazard) analysis Modelling. The sampling 2,423. this allowed the cluster to have an insight of the areas where the flooding season would be more, and partners provided data for several preparedness needs where applicable.

**May 2022** Through that flooding risk analysis, the CCCM cluster collected the required flooding preparedness activities in the high risked areas to and support needed.

Estimated Gaps of services in Sites

As the cluster had in 2022 the site reporting tool data for around 66% of the sites running on a quarterly basis, using that we could see that the gaps are getting better slightly for some sites (covered sites) despite all, but as the needs and gaps are arising more and more for uncovered sites, the situation gets worse for some sectors.

**REFERRALS & ESCALATION SYSTEM**
the Referral and Escalation System (RES) is to track site-level sectoral gaps until their resolution and to enforce the roles and responsibilities of each coordination structure involved in the process. This Referral and Escalation report captures only represents gaps in covered sites which were hard to solve by partners, and then were raised through the CCCM Referral and Escalation System, so the actual gaps are much higher on the ground.
