#### **LEGAL STATUS & DOCUMENTATION**

#### **Temporary Protection**

of respondents have applied for Temporary Protection in the host country

### Top reasons for not applying\*\*

50% 25% Applied for asylum 13%

### **Application status**

of respondents who applied for Temporary Protection have received a positive decision

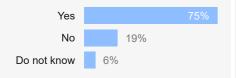

## **Top application challenges\***

#### Top missing documents\*

# Ability to replace documents in the host country\*\*

Households with school-aged children

%

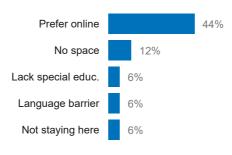

of households include children between 5 to 17 years old

#### **Children education**

%

of households with school-aged children reported at least one child not registered for education in host country

### Main reasons not enrolled in host country\*

Note: out of those who indicated at least one child not attending school in host country

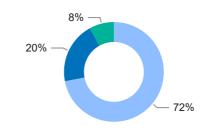

## Households with infants

%

of households include infants between 0 to 4 years old

## Access to childcare for families with infants (0 - 4)\*\*

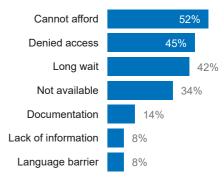

### Access to healthcare

of respondents in need of healthcare experienced difficulties

## Main difficulties accessing healthcare system\*

Note: out of those who indicated experiencing difficulties accessing healthcare

### **Temporary Protection Directive**

UNHCR has a particular interest in the implementation of the Temporary Protection Directive (TPD) in view of the specific role afforded to it under the Directive, and its mandate to provide international protection to refugees. In 2022 UNHCR carried out research in 26 countries applying the TPD and surveyed refugees about their experiences in accessing their rights under the Directive. National authorities, local municipalities, partner organizations and NGOs assisting refugees from Ukraine were also consulted for the research, leading to the report The implementation of the Temporary Protection Directive - six months on. Findings highlight the often interdependent administrative, practical, and legal barriers to refugees' enjoyment of rights under the Directive. Persons with specific needs were found to face increased obstacles in accessing their rights, with a lack of systematic identification processes a root cause.
