Map Production Date: 02 June 2014  
Preferable Print size A3

Calculation of the most vulnerable localities was based on the following data sources:

1-Lebanese population estimate at cadastral level : The source of the data is the Council for Development and reconstruction.

2-UNDP study of 2008. It states that 28.55% of the Lebanese population is estimated to be living under 4USD/capita/day based on data collected in 2004.

The poverty estimates from this study gives break down on "combined Caza" level (admin level 2), this is assumed to be same for all the municipalities under the caza boundaries.

3- The refugee population distribution. This data is frequently updated by UNHCR registration unit. The top quintile of the vulnerability mapping includes 242 localities
