Shelter & Camps

Survey of Extremely Vulnerable Populations in IDP Camps, Uganda

8 in 10 of the "extremely vulnerable populations" who did not return home were over 60 years old

Getting it right

- Women collect water
- Women prepare food

- Most victims will be women

- Target education at women

Reality check

1. **Collecting & using data is good! But ….**
2. Virtually no collection in Phase I & II
3. Education & Shelter do better
4. When collected, little used
5. **Where used, demonstrable difference**

Why?

- Evidence doesn't matter
- Donors and cluster leaders not interested
- Collecting evidence makes us accountable
- Don't believe it is possible

Age and Sex Matter
