AMBULANCE 123 EMERGENCY 137

For more detailed information, and to ensure annual UNHCR medical partners to your governing, please call the hotline 02-7202000

NEEDS ANALYSIS:

- The package offered by the Public Primary HC facilities is limited (Exclusion of all non-communicable chronic diseases in most of PHC facilities, Mental Health and birth delivery services).
- Quality of the Public Health Services, is sub-optimal.
- Negative attitude and behavior of the Syrian refugees toward Public Services.
- Syrian refugees are largely urbanized and predominantly integrated within the host communities of five governorates: Giza, Greater Cairo, Alexandria, Damietta and Qalyubia. They are scattered in some 24 governorates in some 230 districts but mostly residing in greater Cairo, Alexandria and Damietta.
- Referral to secondary and tertiary health care suffers resources limitations to manage lifesaving ailments.
- Monitoring referrals, and ensuring a cost-effective secondary and tertiary health care in the refugees areas of residence remains a challenge and the sector objective is to keep improving access, quality and coverage to health services for Syrian refugee in Egypt by supporting the Ministry of Health facilities, strengthening UNHCR's health providers' capacity and awareness raising among Syrians through community health outreach program.
