1. DEMOGRAPHIC AND SOCIAL PROFILE

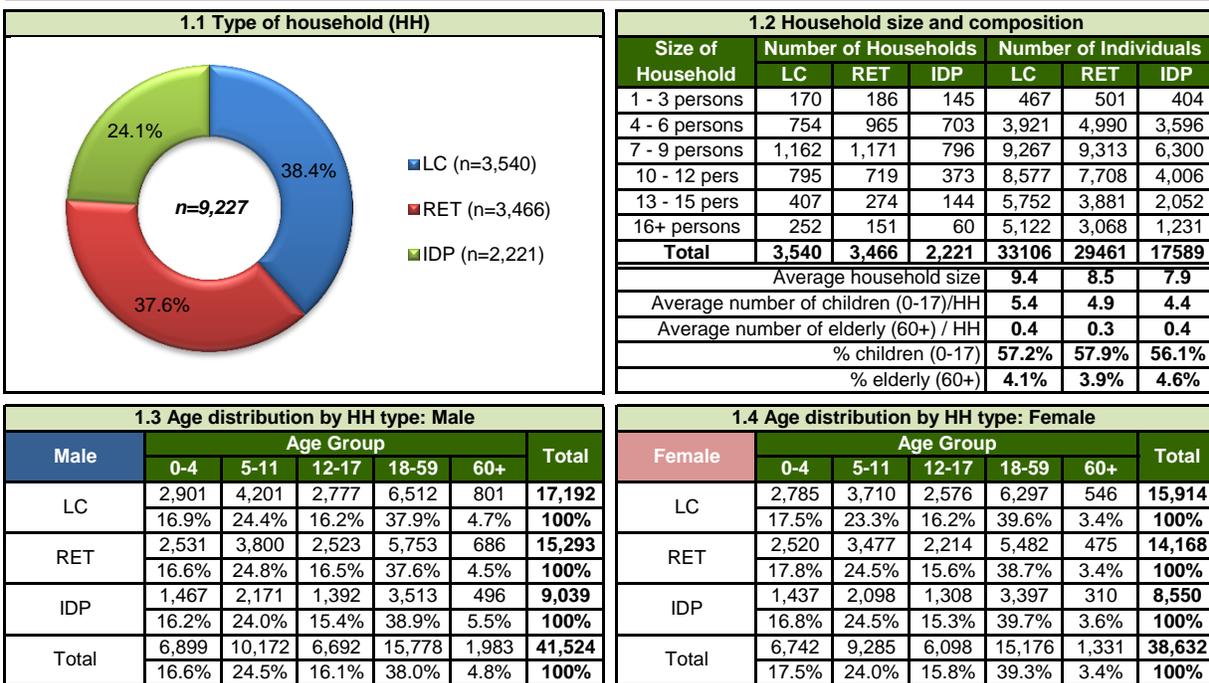

NB: Figures and values in the profile only represent the population surveyed in household survey, not the total Afghanistan population, unless stated otherwise.

Summary

Of the 9,227 households surveyed in 22 high return area all over Afghanistan, 3,540 (38.4%) were local community households, 3,466 (37.6%) were returnee households and 2,221 (24.1%) were IDP households. The households encompass a combined total of 80,156 individuals with a gender ratio of 1.1 males for each female.

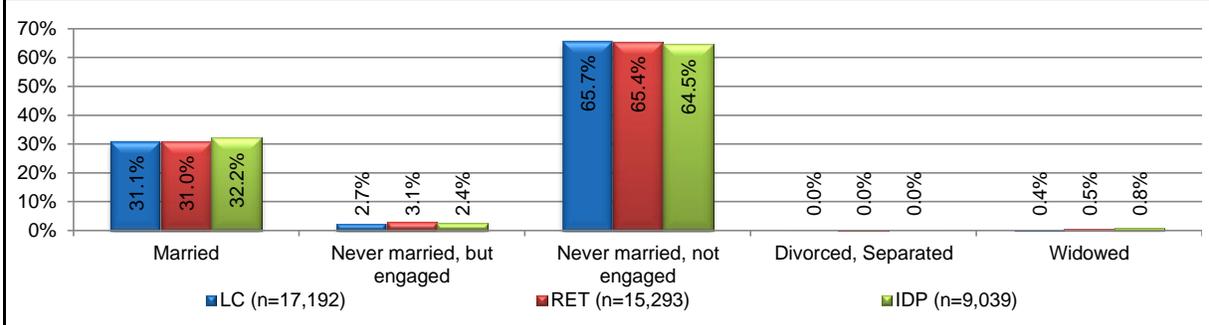

The average household size was revealed by the survey to be 9.4 of the local community, 8.5 persons among returnees and 7.9 persons among IDPs. Children (0-17 years) account for over half the average household size across all three groups with a gender ratio of 1.1 boys for each girl.

The elderly (aged 60+) were found to constitute 3%-5% of the population across all three household types. Approximately 2% of the population reported to be widowed, with six times as many widows as widowers.

2. MIGRATION PROFILE

Summary

Among the households surveyed, the year 1388 (2009/10) witnessed the largest number of returnee arrivals in Afghanistan with 533 returnee households choosing to settle in different HRAs. Also, the year 1391 (2012/13) witnessed the largest number of IDP arrivals with 429 IDP households choosing to settle in different HRAs. Since then, on average, 292 returnee households per year have chosen to settle in the area. Prior to 1391 (2012/13), an average 184 IDP households per year have chosen to settle in 22 HRAs in previous years.

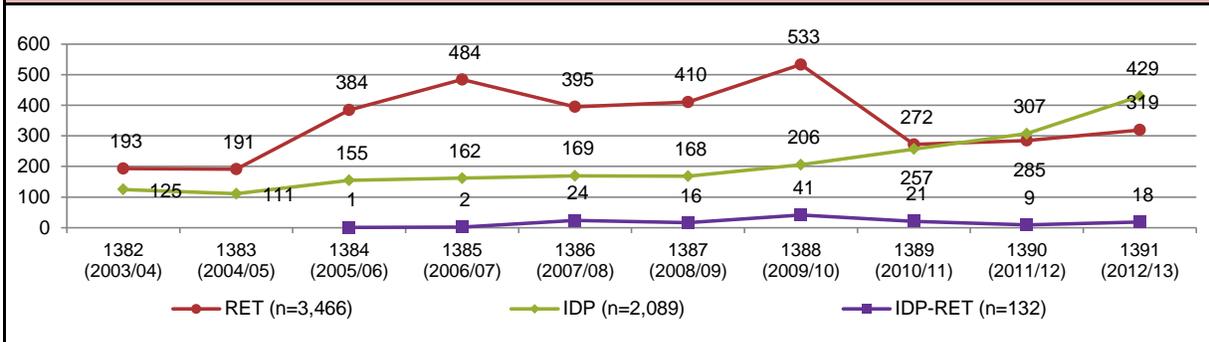

Of returnee and IDP households that have settled in Afghanistan in the last two years, approximately one-quarter of both returnee and IDP households stated that they did so voluntarily. Of these, 97.5% of both returnee and IDP households stated that they intend to remain in the area.

All returnee households had sought asylum in either Pakistan (87.1%) or Iran (12.8%) with 89.9% stating that they did so due to safety reasons due to conflict. Three quarters also cited economic reasons and approximately two-quarters cited family reasons and harassment/discrimination.

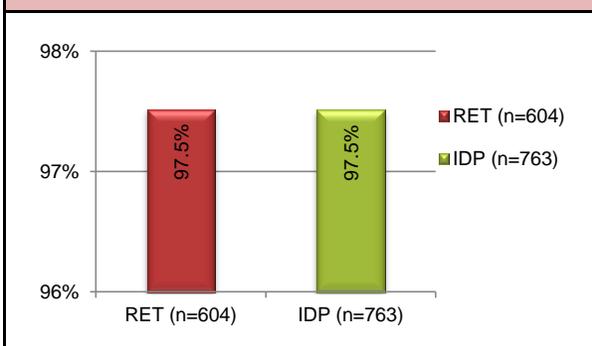

Among IDP households, approximately three-fifths cited economic reasons and safety concerns due to conflict as the main reasons for having fled their districts of origin. Over two-quarters also cited family reasons as having influenced their decision to move. A further, two-fifths stated that they have fled their districts of origin because of harassment/discrimination.

Three-fifths of households stated that legal difficulties were the main reason of returning back to Afghanistan. Further, two-quarters of households stated economic and safety reasons as having influenced their decision to return. Over one-quarter also stated that they have returned back to Afghanistan due to harassment/discrimination.

3. HOUSING STATUS PROFILE

Summary

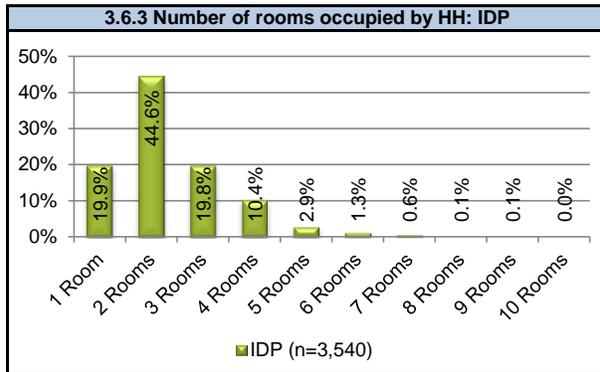

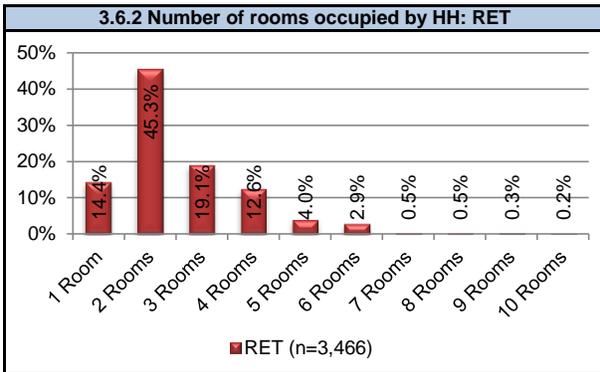

Survey findings reveal that 65.2% of IDP households and 70.0% of local community and 70.2% of returnee households live in single family houses. Part of a shared house was the second most common dwelling type among all three types of households. Vast majority of dwellings were mud-brick or mud construction with wooden roof.

Two-room dwellings were the most common type, with 35.3% of local community and 45.3% of returnee and 44.6% of IDP households residing in such dwellings. Three-room dwellings were the second most common dwelling type among 25.0% of local community and among 19.8% of IDP households and 19.1% of returnee households.

Among both local community (41.4%) and returnee households (41.3%), cooking in the open is most common. A further 36.9% of local community households and 35.0% of returnee households have kitchen as separate room in the dwelling. Vast majority in IDP households (39.3%) have kitchen as separate room in the dwelling while cooking in the open (29.5%) is the second most common in the IDP households.

4. WATER, ELECTRICITY, FUEL AND SANITATION

Summary

Water: Hand pump is the main source of water for 55.3% of local community households, 46.9% of returnee households and 37.9% of IDP households and it is located on average approximately 7 minutes away from both local community and returnee households while 9 minutes away from IDP households. Open Well is the second most principal source of drinking water for 32.3% of local community households, 23.9% of returnee households and 27.7% of IDP households located on average 3 minutes away from all household types. The other important sources are piped, open body of water and bored wells.

Electricity: Of the 9,227 households surveyed, a total of 6,658 (72.2%) reported to have had access to an electricity supply in the 30 days prior to being surveyed. Solar power was the most important source of electricity among 52.6% of local community households, 58.1% of returnee and 52.8% of IDP households. With 29.6% of local community households, 18.4% of returnee and 26.3% of IDP households having access to electric grid as their electric source, makes it the second most common source for electricity. Small percentages among all three household types use battery and community generator (engine) as electric source.

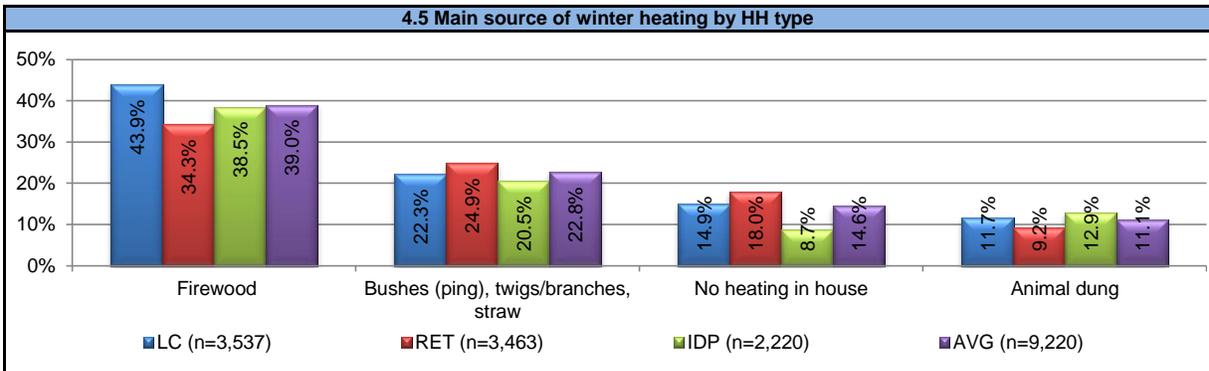

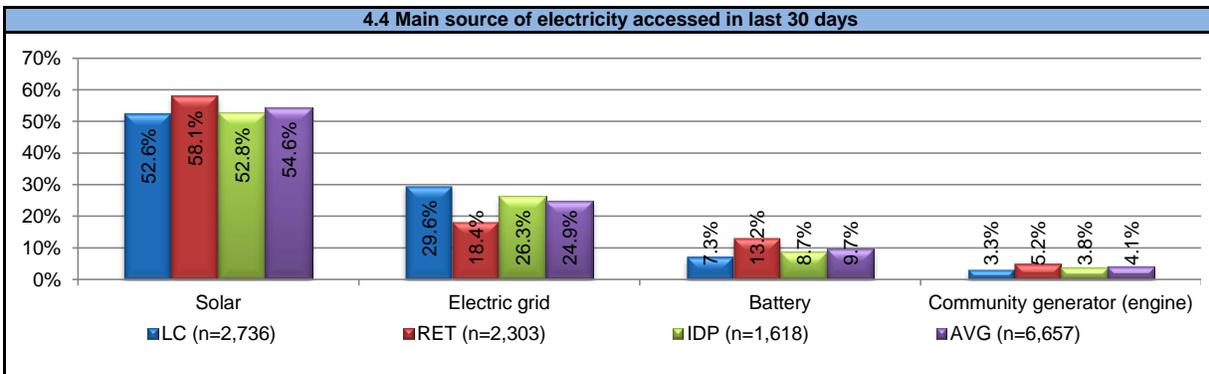

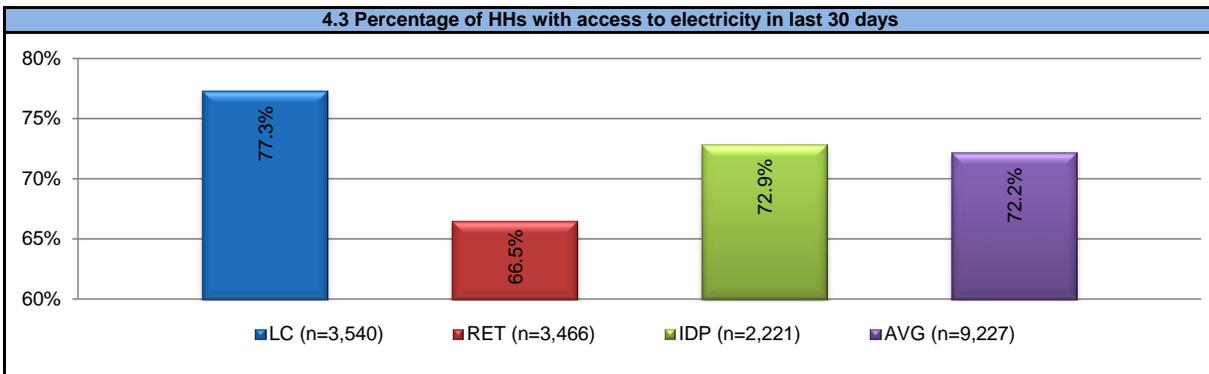

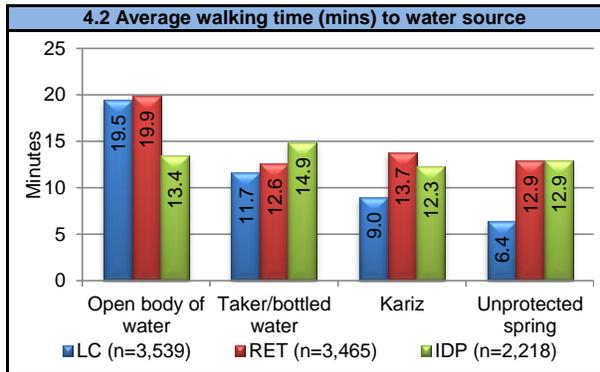

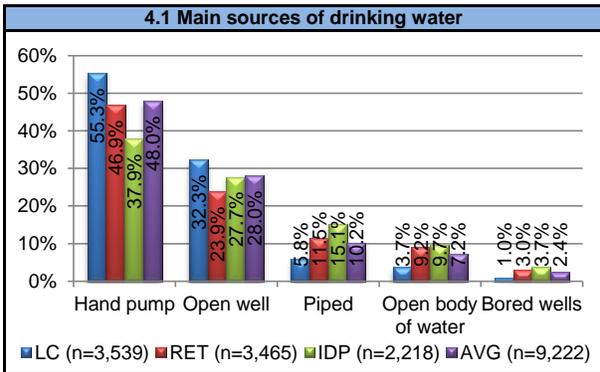

Fuel: During the winter months, Firewood is the main source of heating for approximately two-fifths of all three household types. Bushes (ping), twigs/branches and straw heat the homes of 22.3% of local community households, 24.9% of returnee and 20.5% of IDP households. A further, 11.7% of local community households, 9.2% of returnee and 12.9% of IDP households use animal dung for heating their homes. In addition, 14.9% of local community, 18.0% of returnee households and 8.7% of IDP households have no heating in the house during winter.

The main source of cooking fuel in past 30 days for local community (35.7%) and returnee households (35.8%), is Bushes (ping), twigs/branches and straw but Gas is the main source among IDP (39.1%) using gas for cooking. A further 32.9% of local community households, 29.3% returnee households and 22.7% of IDP households use firewood for cooking. A small percentages of all three household types use animal dung as their cooking fuel source.

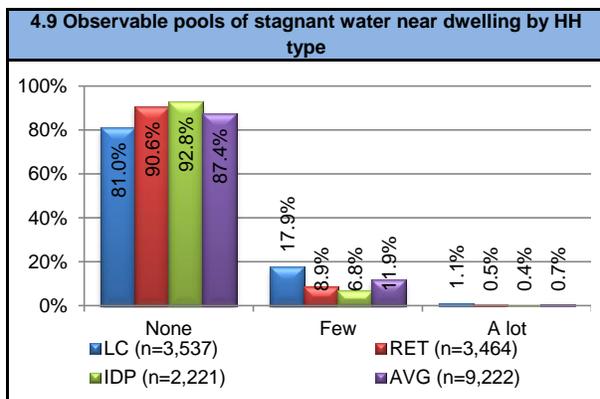

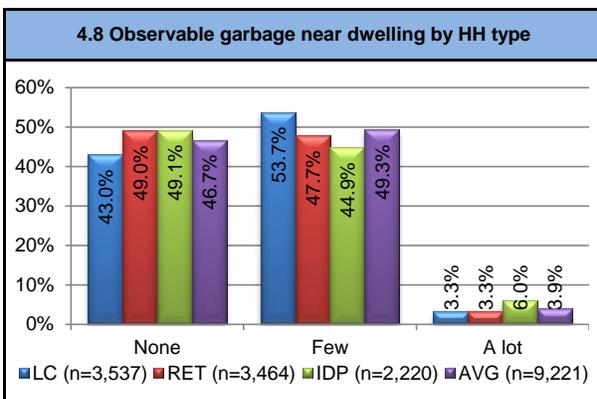

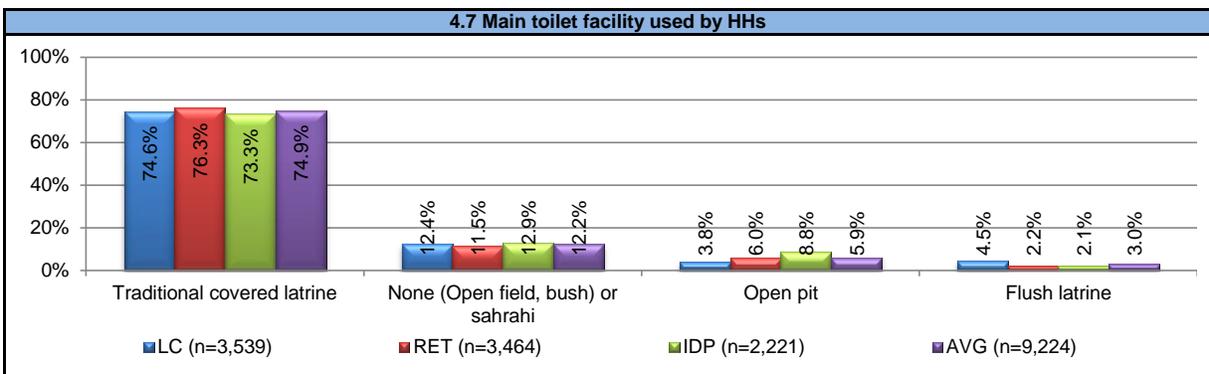

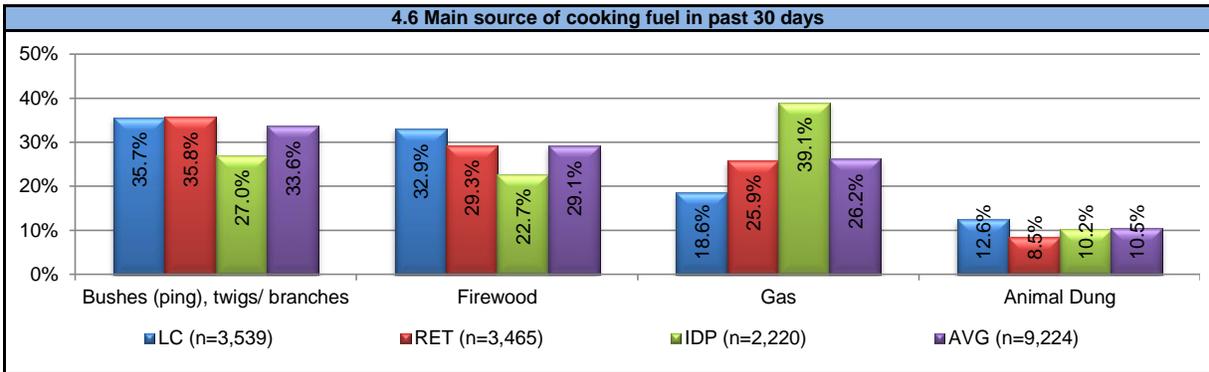

Sanitation: Approximately three-quarters of household surveyed have access to a traditional covered latrine. A further, 12.4% of local community, 11.5% of returnee and 12.9% of IDP households use open field, bushes or sahrahi as their toilet. A small number of families are using open pit and flush latrines also.

Surveyors took note of whether any garbage or pools of stagnant water were observed in close proximity to the households they interviewed. 43.0% of local community households, 49.0% of returnee households and 49.1% of IDP households didn't have any garbage near their dwellings. A further, 53.7% of local community households, 47.7% of returnee households and 44.9% of IDP households had little garbage near their dwellings. Approximately less than 6% of all three households had a lot of garbage near their dwellings. Also, 81.0% of local community households, 90.6% of returnee households and 92.8% of IDP households didn't have any stagnant water near their dwellings. In addition, 17.9% of local community households, 8.9% of returnee households and 6.8% of IDP households had little stagnant water near their dwellings. Only in the range of 1% of all three household types had a lot of stagnant water near their dwellings.

6. HOUSEHOLD INCOME, DEBT, ASSETS AND EXPENDITURES

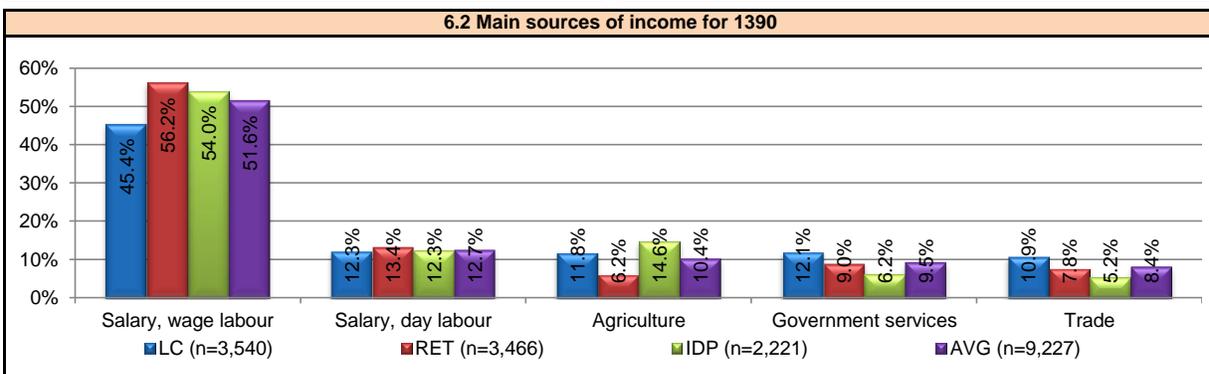

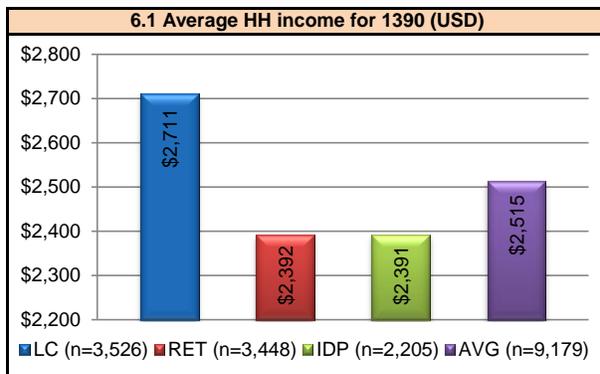

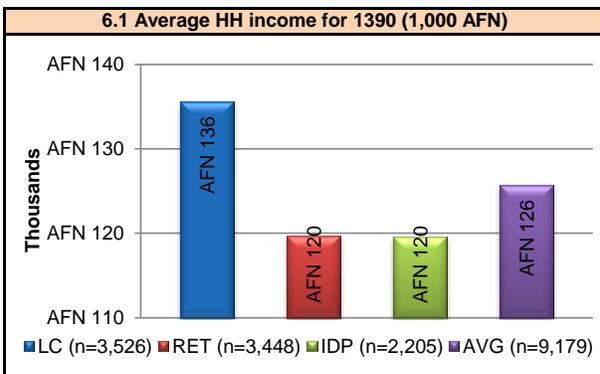

Summary

Income: Average household income in 1390 was USD 2,711 among local community households, USD 2,392 among returnee households and USD 2,391 among IDP households. Wage labour was the primary source of income for 54.0% of IDP households, 56.2% of returnee households and 45.4% of local community households. Day labour was also a significant income source for 13.4% of returnee households and 12.3% of both local community households and IDP households. Remaining households all relied upon trade, agriculture and government services in varying proportions.

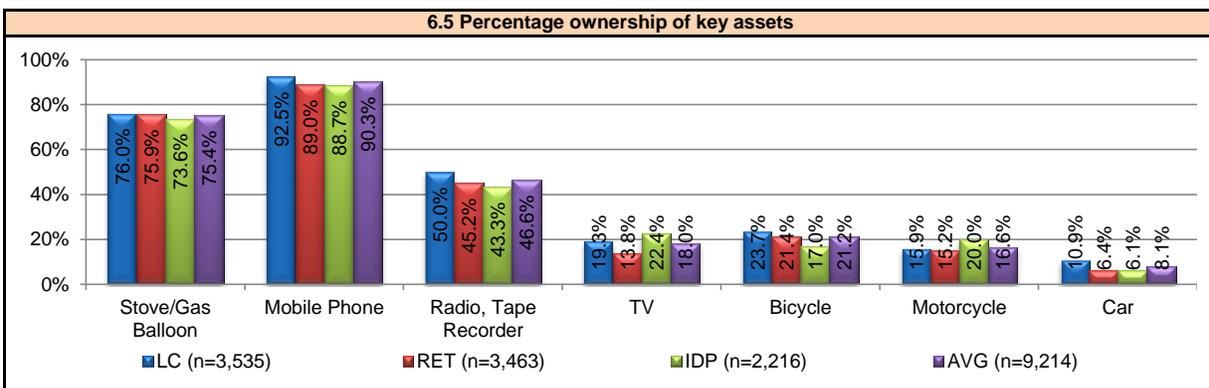

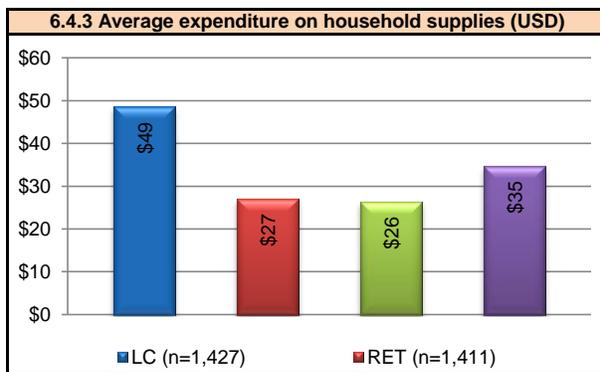

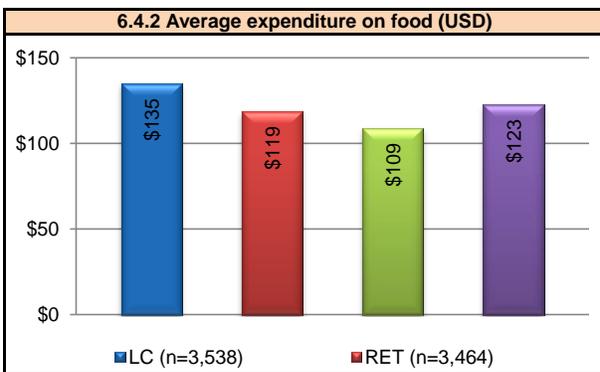

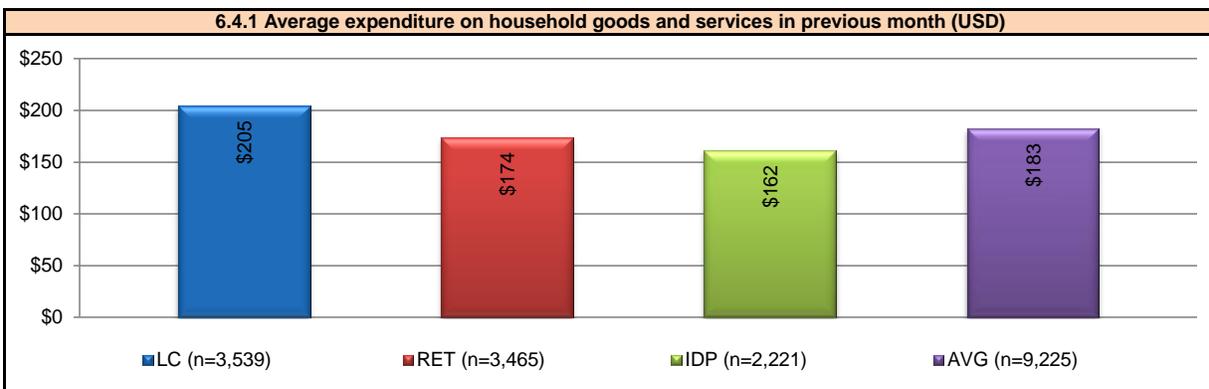

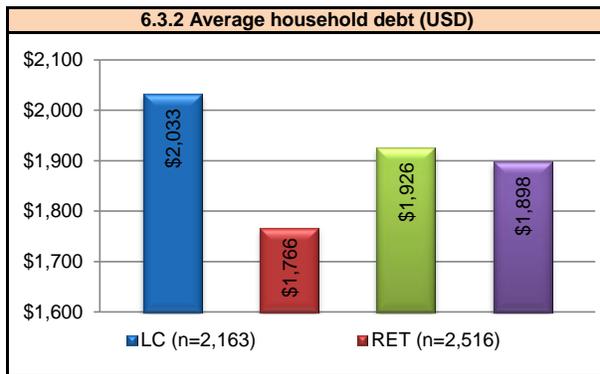

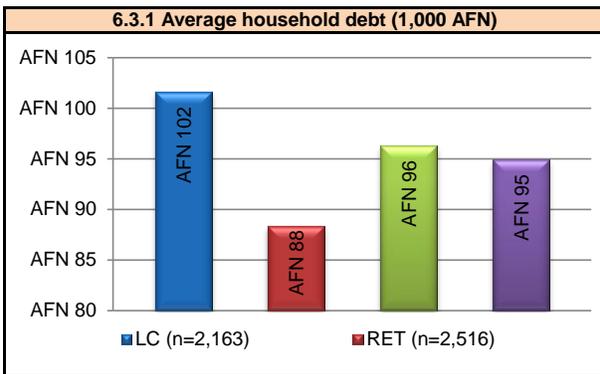

Average household debt was revealed to be USD 1,926 among IDP households, USD 2,033 among local community households and USD 1,766 among returnee households.

Expenditure: Average household expenditure in the month prior to being surveyed was USD 205 among local community households, USD 174 among returnee households and USD 162 among IDP households. A marginally larger proportion of monthly expenditure was spent on food supplies between (65 – 70%) by all three household types.

Assets: With regard to ownership of key household assets, 76.0% of local community households, 75.9% of returnee households and 73.6% of IDP households own a stove/gas balloon. A mobile telephone is owned by 92.5% of local community households, 89.0% of returnee households and 88.7% of IDP households. A radio was owned by proportionally more local community households (50.0%) than returnee (45.2%) and IDP (43.3%) households. A further, 39.6% of Local community households, 36.6% of returnee and 37% of IDP households own a bicycle and a motorcycle. Approximately 6% of IDP and returnee households reported owning a car which is less than local community households (10.9%).

7. AGRICULTURE & LIVESTOCK

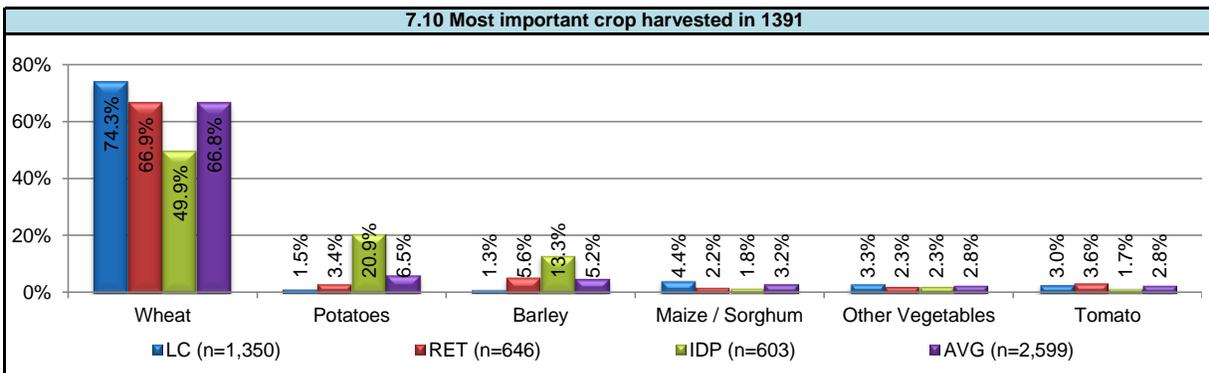

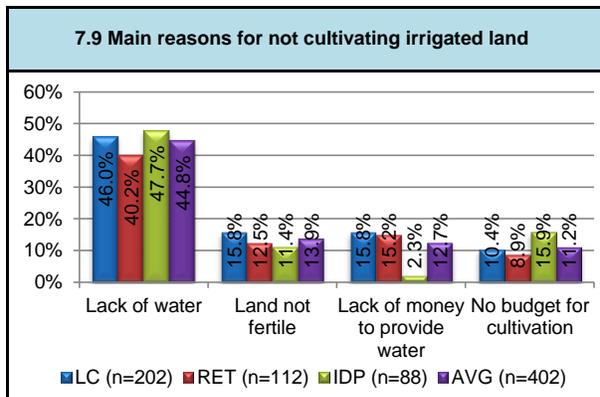

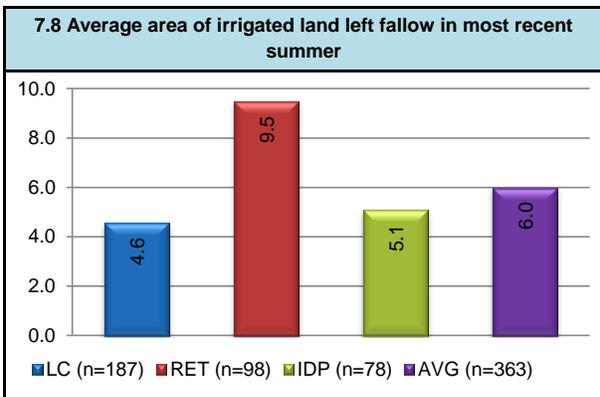

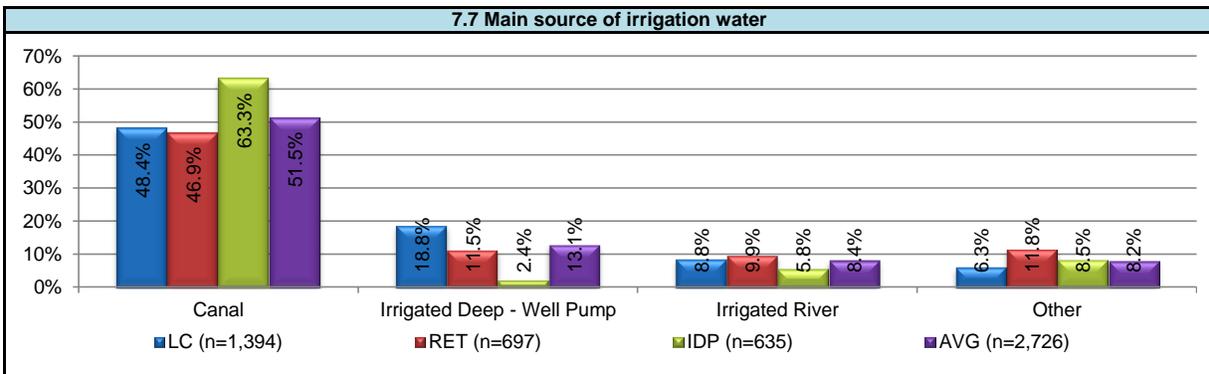

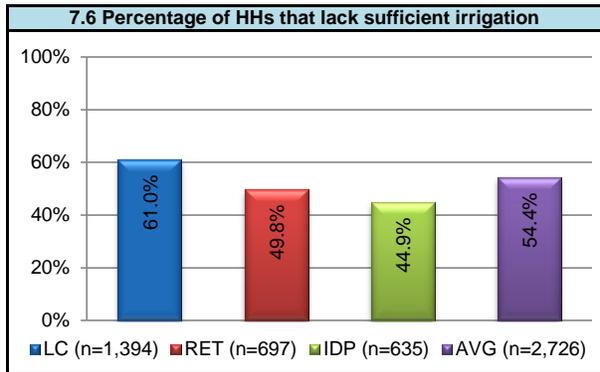

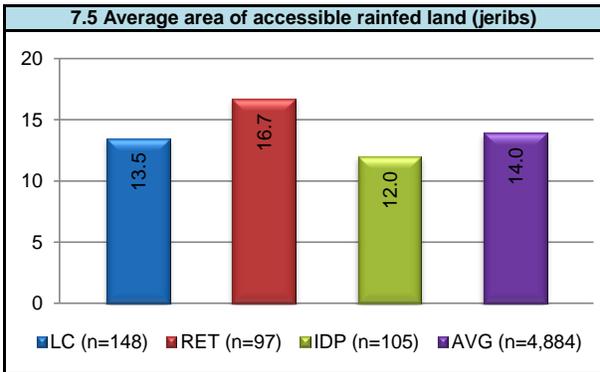

Summary

Agriculture: Of surveyed households, 28.6% of IDP households, 39.4% of local community households and 20.1% of returnee households have access to agricultural land. In 1391, on average, 4.8 jeribs of land were cultivated by IDP households and 4.4 jeribs were cultivated by local community and 3.9 jeribs were cultivated by returnee households, respectively. Wheat was the most important crop for 74.3% of local community households, 66.9% of returnee households and 49.9% of IDP households, while potatoes and barley were more important among IDP households than returnee and local community households. Also maize, other vegetables and tomato were also important among all three household types. Proportionally more local community households (9.1%) households have access to garden plot compared to returnee (6.6%) and IDP households (6.2%).

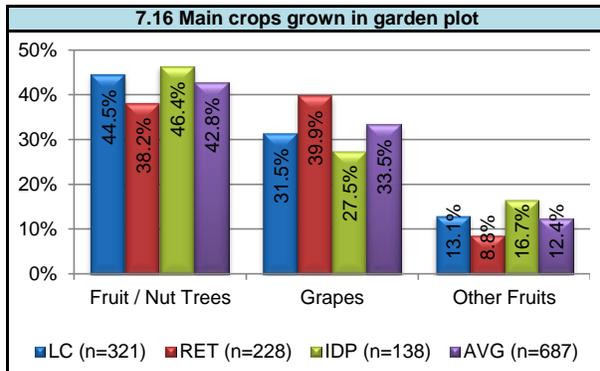

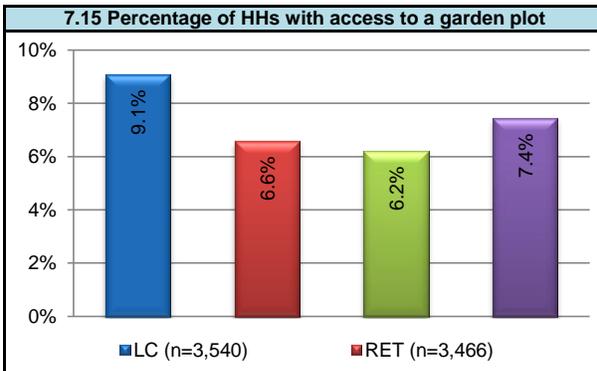

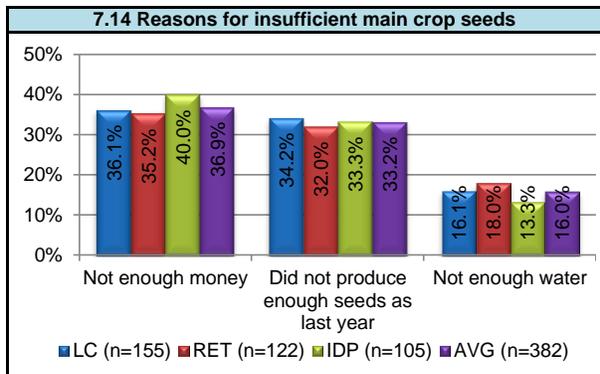

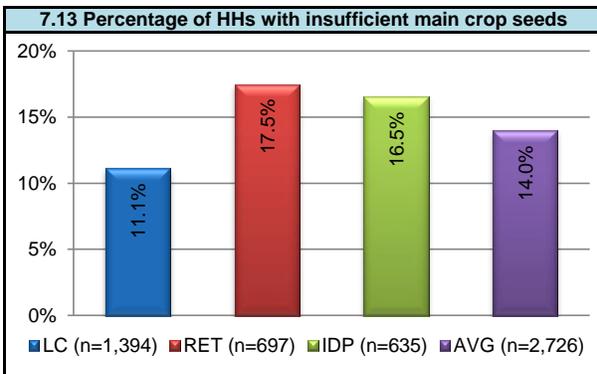

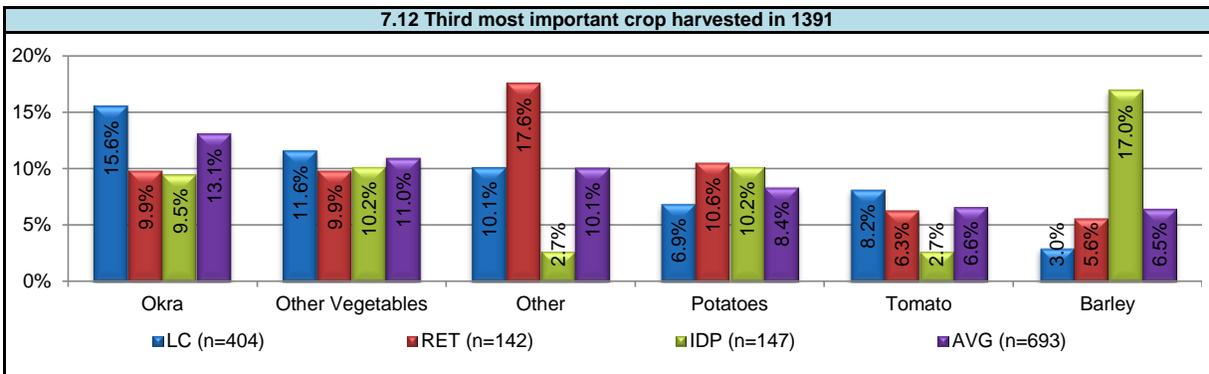

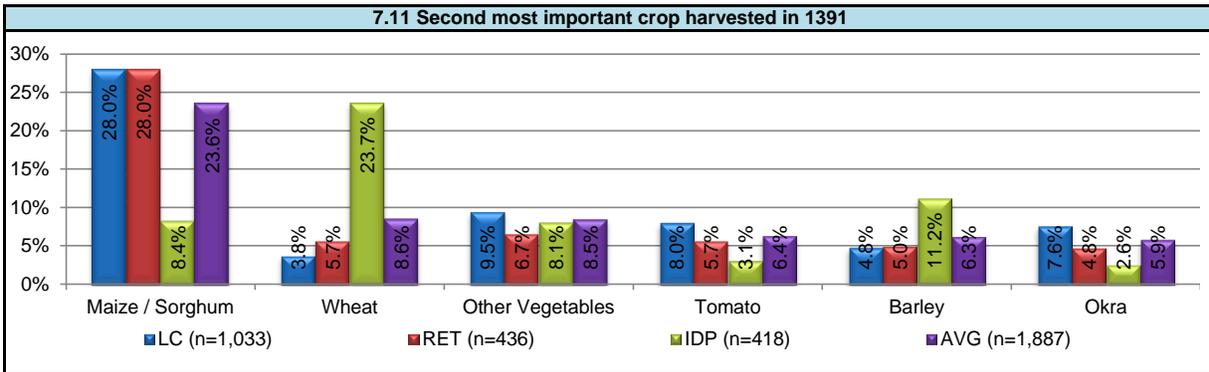

Livestock: Some form of livestock is owned by 44.7% of IDP households, 57.5% of local community households and 45.4% of returnee households. Among households that do, 74.9% of local community households, 44.4% of IDP households and 44.1% of returnee households own cows and. A further 59.4% of returnee households, 56.0% of local community and 50.5% of IDP households own chickens. Among IDP households, 39.2% own sheep, 34.8% own goats and 44.3% own donkeys are significantly more likely than other household types to own these.

8. ACCESS TO SERVICES PROFILE

Summary

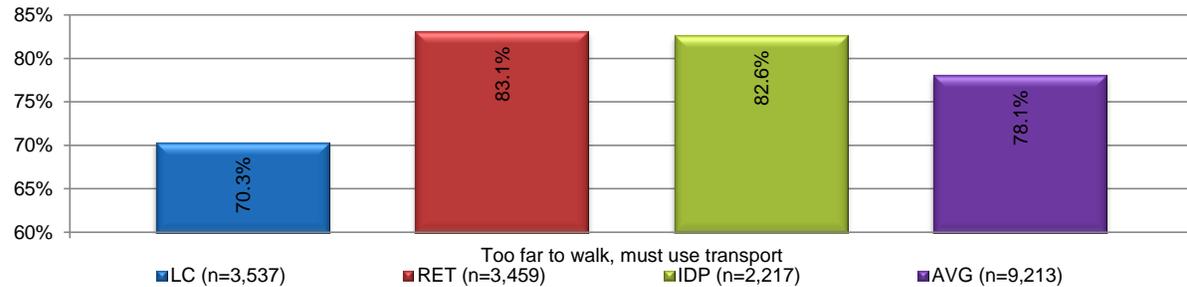

Over 70% householders in all three community groups stated that the Provincial Centre is too far to walk to. In the last three months, the main reasons for travelling to the Provincial Centre for all three household types were to purchase goods or services, to work or to go to hospital. Moreover, approximately two-quarters of all three household types stated that the nearest police station is 15-60 minutes away on foot.

Over two-quarters (53.6%) of local community households, over two-fifths (45.4%) of returnee households and 42.0% of IDP households stated that the nearest public health centre is located 15-60 minutes away. For the vast majority in all three community groups, the nearest private health clinic is either too far to walk to or 15-60 minutes away. The nearest hospital is too far to walk to for all three household types.

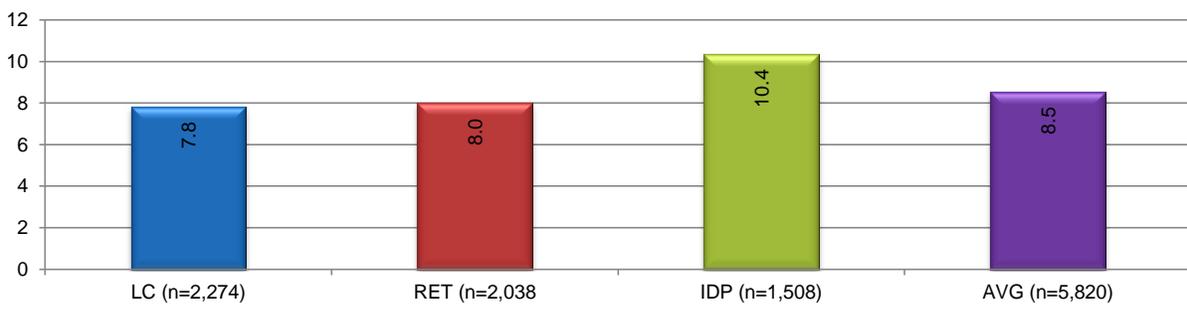

Over two-fifths of all three household types stated that their place of employment is less than 15 minutes away. For 62.5% of returnee households, 64.3% of local community households and 54.4% of IDP households, transport can be accessed less than 15 minutes away on foot. For the vast majority of the remainder, access to transport is 15-60 minutes away.

For all three household types, the nearest primary, secondary and high schools for both boys and girls are located 15-60 minutes away on foot.

9. EDUCATION PROFILE

Summary

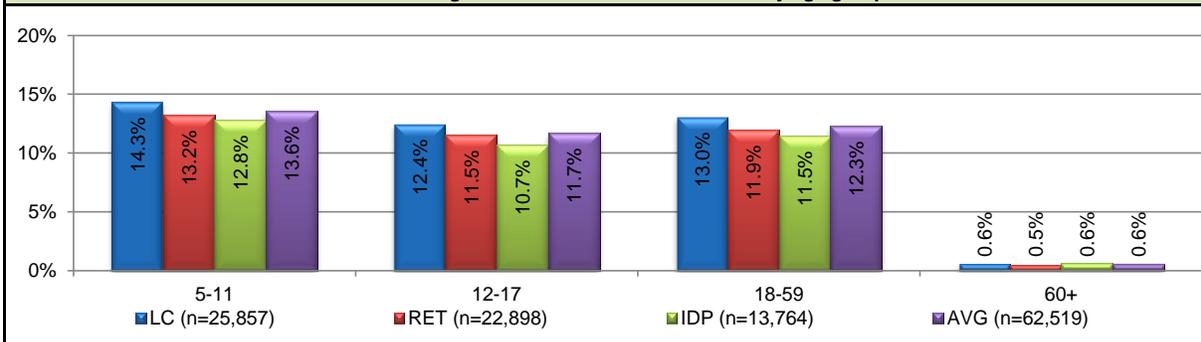

Among those aged five years and over, 40.4% of the local community, 37.1% of returnees and 35.6% of IDPs reported to be literate. Of these, 55.8% of local community males, 50.8% of returnee males and 47.0% of IDP males reported to be literate. Similarly, 23.6% of local community females, 22.1% of returnee females and 23.5% of IDP females reported to be literate.

Among adults aged eighteen years and over, 83.3% of local community males, 88.2% of returnee males and 89.6% of IDP males did not achieve any school grade. Similarly, 97.3% of local community females, 97.9% of returnee females and 97.4% of IDP females had not achieved any school grade.

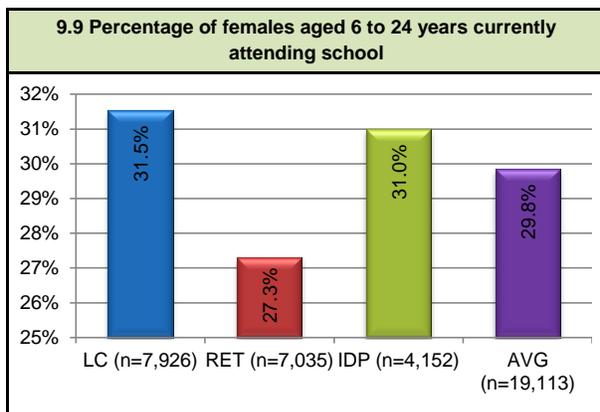

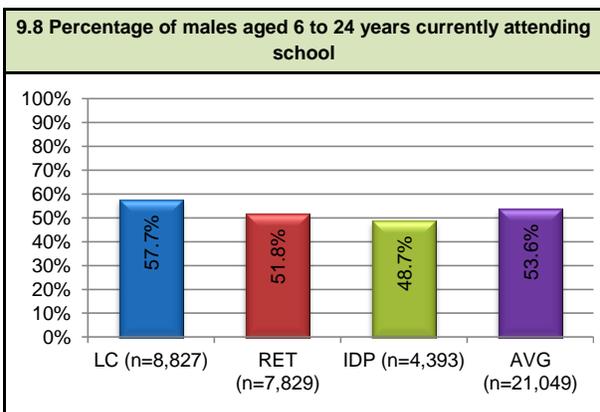

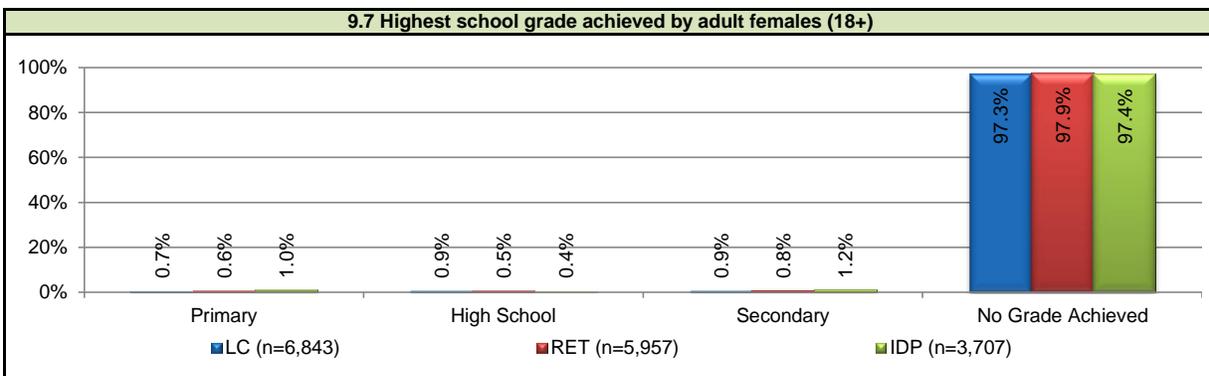

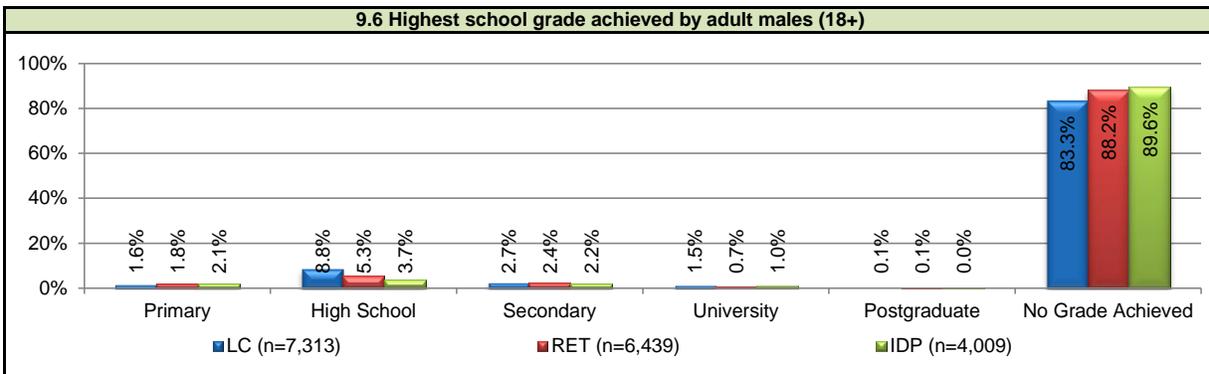

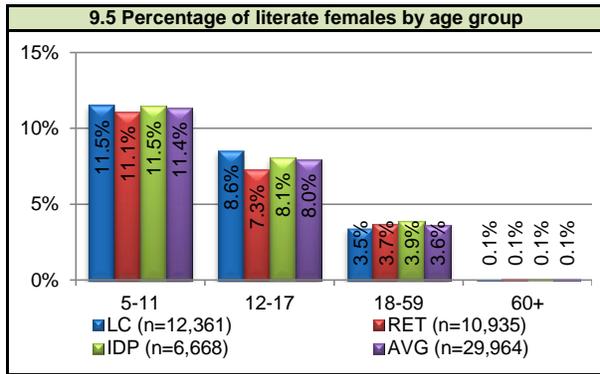

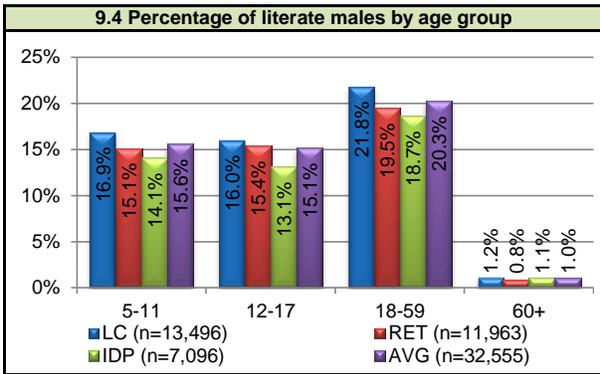

Among males aged 6 to 24 years, 57.7% of local community, 51.8% of returnees and 48.7% of IDPs males reported to be currently attending school. Among females aged 6 to 24 years, 31.5% of local community females, 27.3% of returnees and 31.0% of IDP females reported to be currently attending school. The main reason for not attending school given by those aged 6 to 24 years across all three groups was because the family did not permit them to. A further 15.6% of those aged 6 to 24 years across all three groups do not attend school because they don't like it/didn't learn enough.

10. HEALTH PROFILE

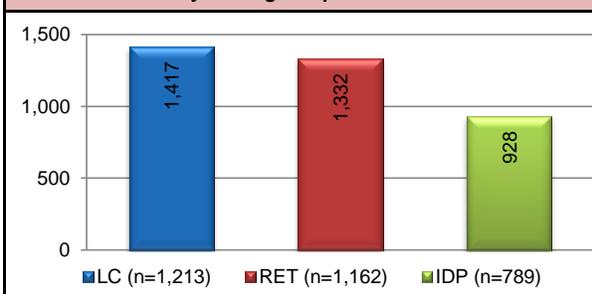

Summary

One-third (34.2%) of local community households, 33.5% of returnee households and 35.5% of IDP households had between one and two household members admitted to a health facility as an inpatient over the course of the previous month. Over two-quarters (52.5%) of local community, over two-fifths (43.9%) of returnee and 55.8% of IDP households also had at least one member receive care from a health provider, a pharmacy or traditional healer without having to stay overnight. The private health facility was visited most by all three household groups, followed by the Regional Hospital and comprehensive health center. The most common reasons for seeking medical treatment by local community households were Infection diseases (22.3%), digestive problems (18.4%) and respiratory problems (18.3%). Similarly, for returnee households the most common reasons were Infection diseases (22.9%), digestive problems (19.3%) and treatment of respiratory problems (16.2%). Among IDP households, the main reasons for seeking medical treatment were digestive problems (19.2%), infection problems (19.0%) and respiratory problems (17.8%).

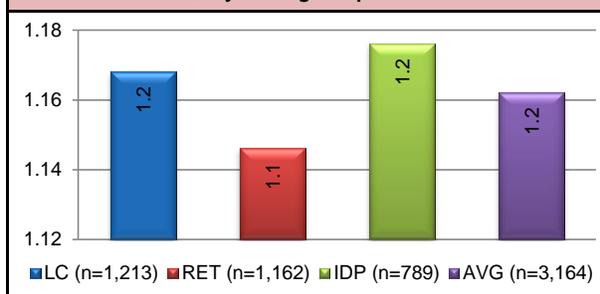

Of the 18,116 females aged 13-49 years that were included in the survey, a total of 2,969 were reported to be married among local community households (n=1,202), returnee households (n=989) and IDP households (n=778). Based on this data, the average number of births stands at 4.8 for local community females, 4.8 for returnee females and 4.7 for IDP females. Correspondingly, the average number of infant/child deaths is 0.6 for local community females, 0.7 for returnee females and 0.8 for IDP females. Of the 2,806 females aged 13-49 years that have given birth, 75.6% of local community females, 71.9% of returnee and 59.1% of IDP females received antenatal care during their last pregnancy with an average of 3.3 antenatal care visits per mother, and one-third (34.7%) had the assistance of a midwife during delivery.

With regard to children under the age of five, 75.9% of local community children, 64.9% of returnee children and 59.0% of IDP children have been registered with the civil authorities. Over the course of the previous month, 89.3% of local community under-fives, 74.4% of returnee under-fives and 64.6% of IDP under-fives have received a Vitamin A capsule, and in the region of one quarter across all three household types have suffered from diarrhea. Furthermore, approximately one-fifth of all three groups have a persistent cough.

11. HOUSEHOLD SHOCKS AND COPING STRATEGIES

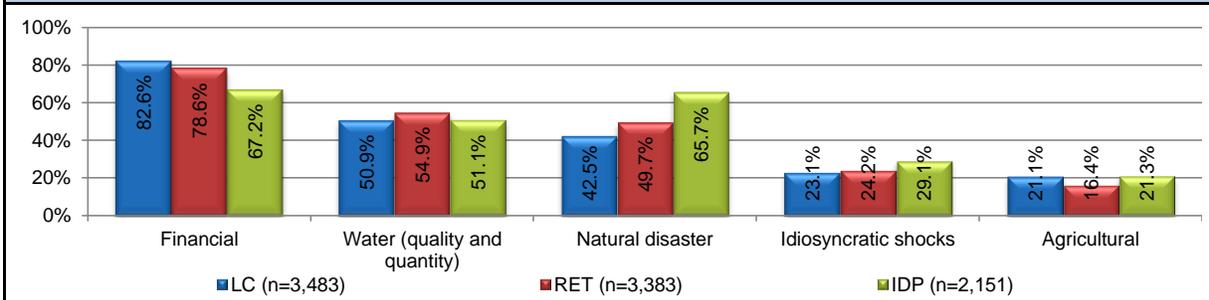

Summary

Four-fifths (79.1%) of local community households were affected by unusually high increases in food prices. A further, 41.9% of local community households were affected by reduced drinking water quantity, 25.2% by severe winter conditions, 35.5% by reduced drinking water quality and 19.4% by heavy rains that prevented work. Over four-fifths (85.5%) of local community households responded to these shocks by decreasing expenditures. A further, 35.6% of local community households took loans, 41.0% reduced quality of diet, 39.8% reduced quantity of diet and 23.1% of households received help from others in the community.

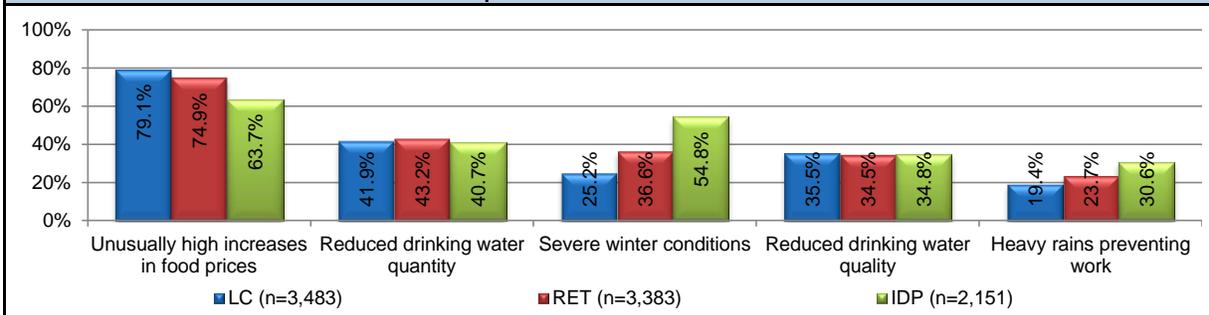

74.9% of returnee households were affected by unusually high increases in food prices. A further, 43.2% of returnee households were affected by reduced drinking water quantity, 36.6% by severe winter conditions, 34.5% by reduced drinking water quality and 23.7% by heavy rains that prevented work. Approximately four-fifths (78.6%) of returnee households responded to these shocks by decreasing expenditures. A further, 43.5% of returnee households took loans, 34.2% reduced quality of diet, 31.6% reduced quantity of diet and 25.3% of households received help from others in the community.

63.7% of IDP households were affected by unusually high increases in food prices. A further, 40.7% of IDP households were affected by reduced drinking water quantity, 54.8% by severe winter conditions, 34.8% by reduced drinking water quality and 30.6% by heavy rains that prevented work. Approximately four-fifths (79.6%) of IDP households responded to these shocks by decreasing expenditures. A further, 48.2% of IDP households took loans, 32.5% reduced quality of diet, 28.4% reduced quantity of diet and 28.9% of households received help from others in the community.

12. PROTECTION PROFILE

Summary

Of the 9,219 households surveyed, 80.9% had an adult male aged 18-59 years as head of household. The head of household of 26 local community households, 23 returnee households and 17 IDP households were a male aged 12-17 years, and 82.9% of all three household types were headed by females aged 18-59 years. Furthermore, one local community household was headed by a female aged 12-17 years. A total of 1,693 households had an elderly (aged 60+) head of household of whom 2.5% were female. 86 local community households, 110 returnee households and 100 IDP households were headed by a widow or widower.

28 local community males, 122 local community females, 23 returnee males, 116 returnee females, 12 IDP males and 60 IDP females aged 13-17 years were reported to be married. Among married adults, a total of 728 local community females, 564 returnee and 470 IDP females reported to have been under-18 years of age at the time of marriage.

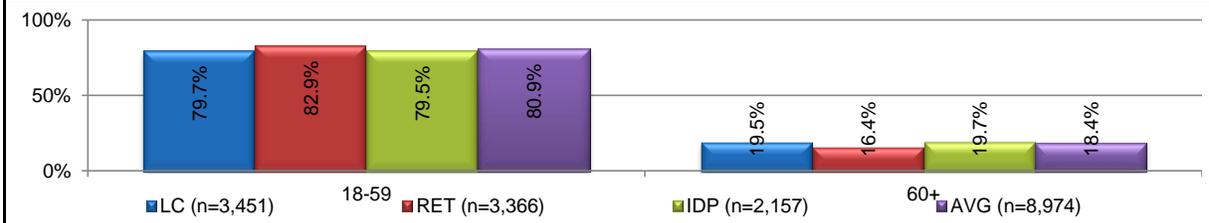

In the region of 8.0% of all three household types contained more than one wife.

The survey found 2,704 people living with a disability of which 59.7% were male. The most common disabilities were reported to be either physical (40.6%) or sensory (16.5%) in nature. 54.4% of disabled local community, 55.1% of disabled returnees and 56.7% of disabled IDPs were adults aged 18-59 years. In the region of one-fifth of disabled people in all three groups were aged 60 years and over.

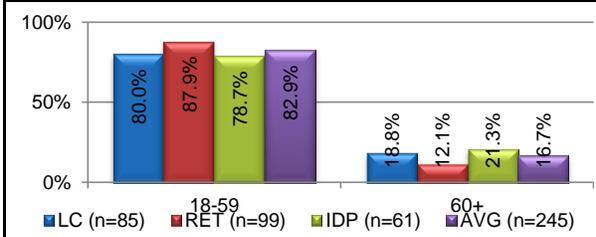

Of the 13,909 females aged 6-17 years, 29.0% of IDP females, 29.4% of local community females and 31.1% of returnee females are currently not attending school.
