<sup>1</sup>Actual capacity is calculated as the subtraction of current places minus 15% which is this week's estimated average natural loss for mainland and 5% for islands. Natural loss is the number of places that cannot currently be used because of damages/repairs, protection issues, family size, etc. The formula applies to all type of accommodation. Actual capacity is a close estimate of available places to be used as reference.

<sup>2</sup>Occupancy rate is calculated as the percentage of current population over actual capacity.

The actual available capacity is estimated to be at 604 places (mainland: 456 / islands: 148).

As of today 268 places have been reserved for planned transfers.

Considering an average natural loss (10-15%) the estimated remaining available places are 302 (mainland: 195 / islands: 107)
