

Theory of change

Key components

5 October 2018

- Have a common understanding on what is the Theory of Change approach and its value
- Understand the process for how to develop a Theory of Change
- Understand how to assess the quality of sector ToC narrative

Objective

What is a Theory of Change

What is the value of a Theory of Change

How is a Theory of Change presented

How to create a Theory of Change

Quality assurance checklist

WHAT IS A THEORY OF CHANGE?

- A representation of **how** and **why** a complex change process will succeed given specific assumptions
- A blueprint of all the building blocks needed to achieve the longer-term goals of a particular intervention

"I THINK YOU SHOULD BE MORE EXPLICIT HERE IN STEP TWO."

Objective

What is a Theory of Change

What is the value of a Theory of Change

How is a Theory of Change presented

How to create a Theory of Change

Quality assurance checklist

- All programmes are designed according to some kind of logic about what they are supposed to achieve
- Complicated interventions can be difficult to explain and a ToC helps tell a common story for an organization
- Think through the many underlying and root causes of the challenges that the sector is facing, and how they influence each other
- Engage with research about how change is created, and provide a framework for learning
- Develop and manage partnerships and partnership strategies.

Objective

What is a Theory of Change

What is the value of a Theory of Change

How is a Theory of Change presented

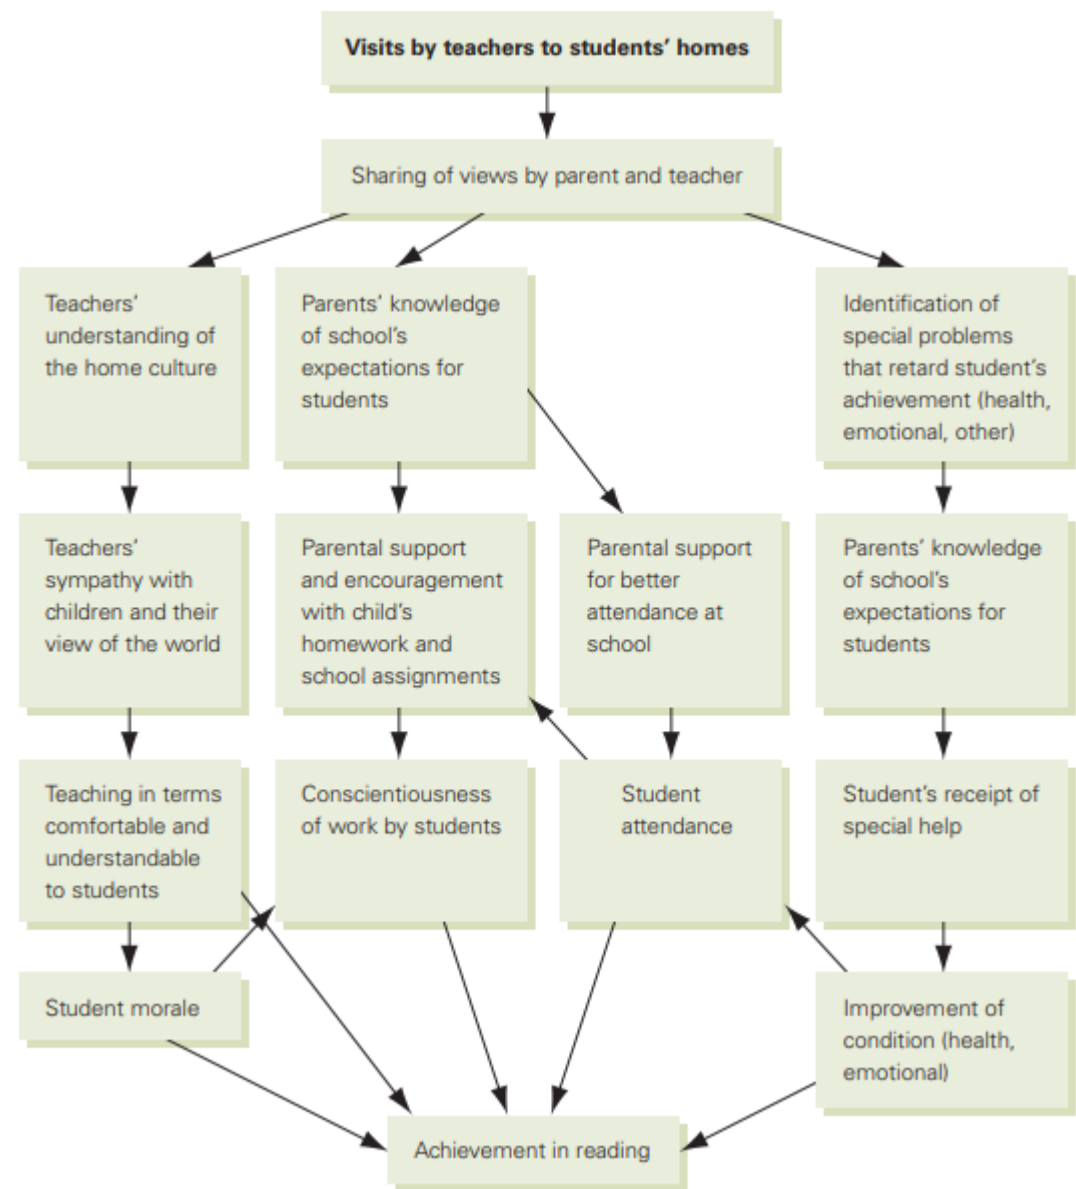

How to create a Theory of Change

Quality assurance checklist

HOW IS A THEORY OF CHANGE PRESENTED?

- A ToC can be a picture or a diagram
- Variety of templates can be used to show the pathways you could follow to achieve your desired change

HOW TO CREATE A THEORY OF CHANGE? – KEY STEPS

1. Focus on the high-level change the sector intends to contribute to in the current context

2. Identify what is needed for the desired development change to happen

3. Establish and make explicit the related key assumptions underpinning the theory of how change happens, and major risks that may affect it.

4. Identify partners and actors who will be most relevant for achieving each result, taking into account the related risks and assumptions.

Objective

What is a Theory of Change

What is the value of a Theory of Change

How is a Theory of Change presented

How to create a Theory of Change

Quality assurance checklist

- Identify the current situation and the desired change

DESIRED CHANGE

CURRENT SITUATION

Objective

What is a Theory of Change

What is the value of a Theory of Change

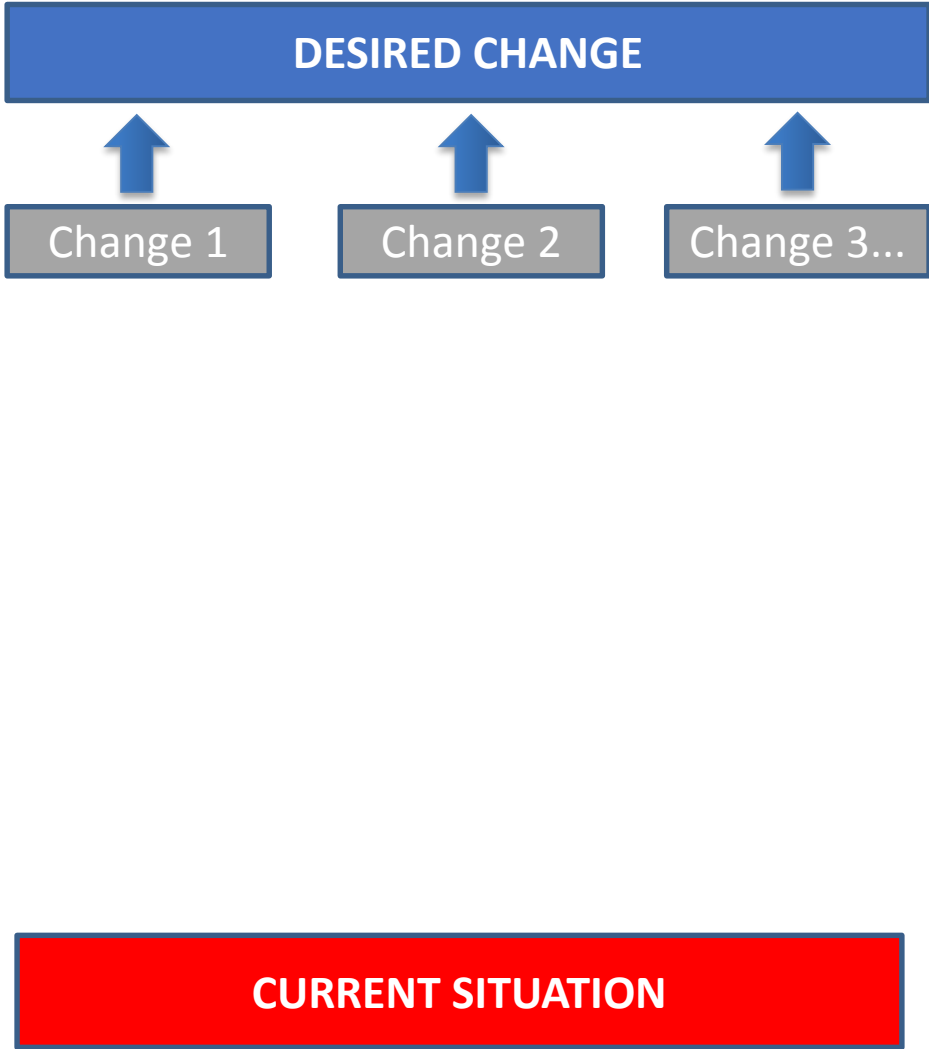

How is a Theory of Change presented

How to create a Theory of Change

Quality assurance checklist

- Identify the current situation and the desired change
- Conduct a “backwards mapping” to identify what is needed to achieve that desired change

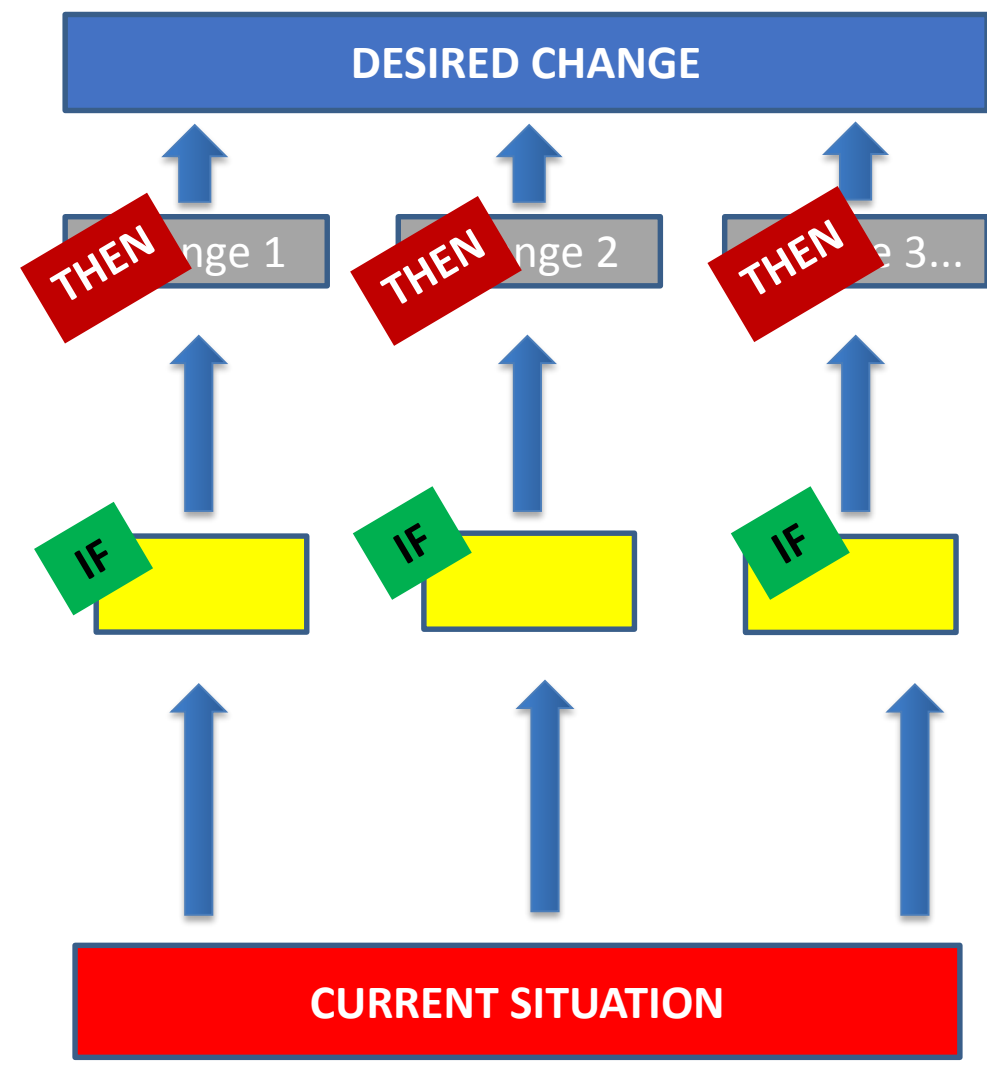

- Objective
- What is a Theory of Change
- What is the value of a Theory of Change
- How is a Theory of Change presented
- How to create a Theory of Change
- Quality assurance checklist

HOW TO CREATE A THEORY OF CHANGE – CHANGE ANALYSIS

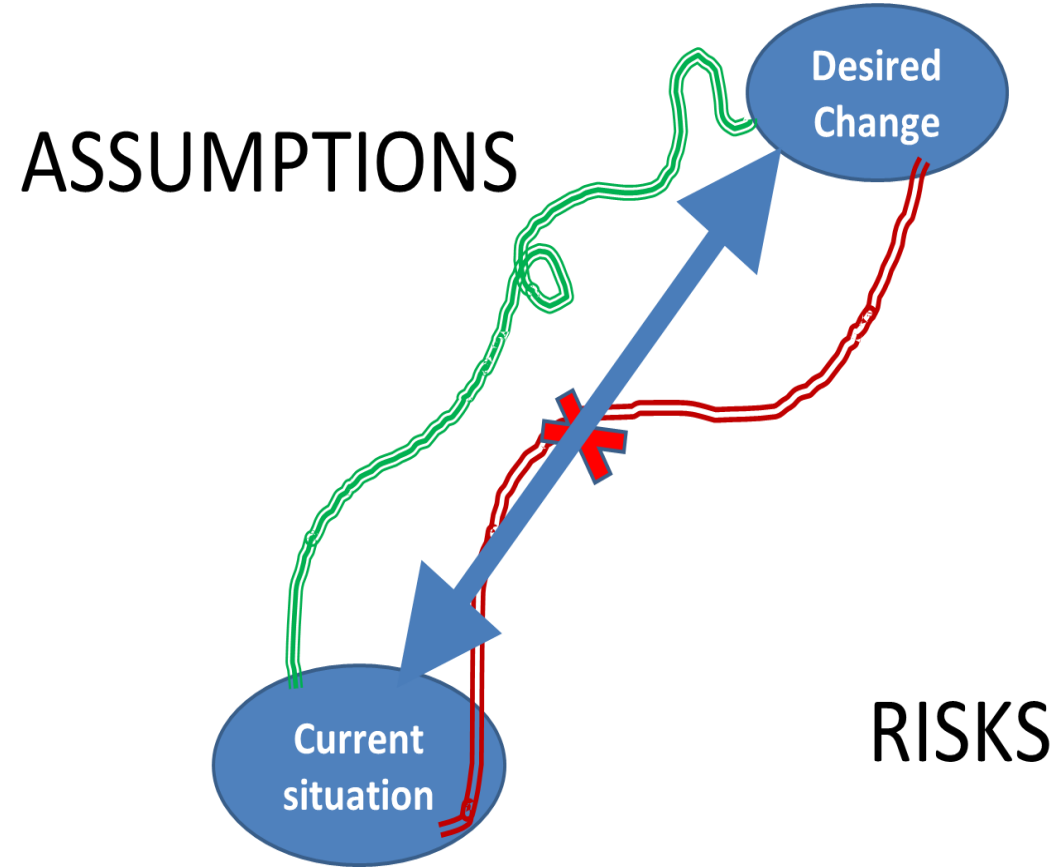

- Identify the current situation and the desired change
- Conduct a “backwards mapping” to identify what is needed to achieve that desired change
- Identify the “IF.... THEN” interventions and activities needed to achieve key changes

- Objective
- What is a Theory of Change
- What is the value of a Theory of Change
- How is a Theory of Change presented
- How to create a Theory of Change
- Quality assurance checklist

- Analyse the **risks and assumptions**
- **Assumptions**: things/events accepted as certain to happen
- Assumptions can be about any node in a theory of change, or the causal linkages between them
- **Risks**: a component of uncertainty in the intervention; they either happen, or not.
- When they happen, risks block the pathway of change. Need to think of mitigation strategies!

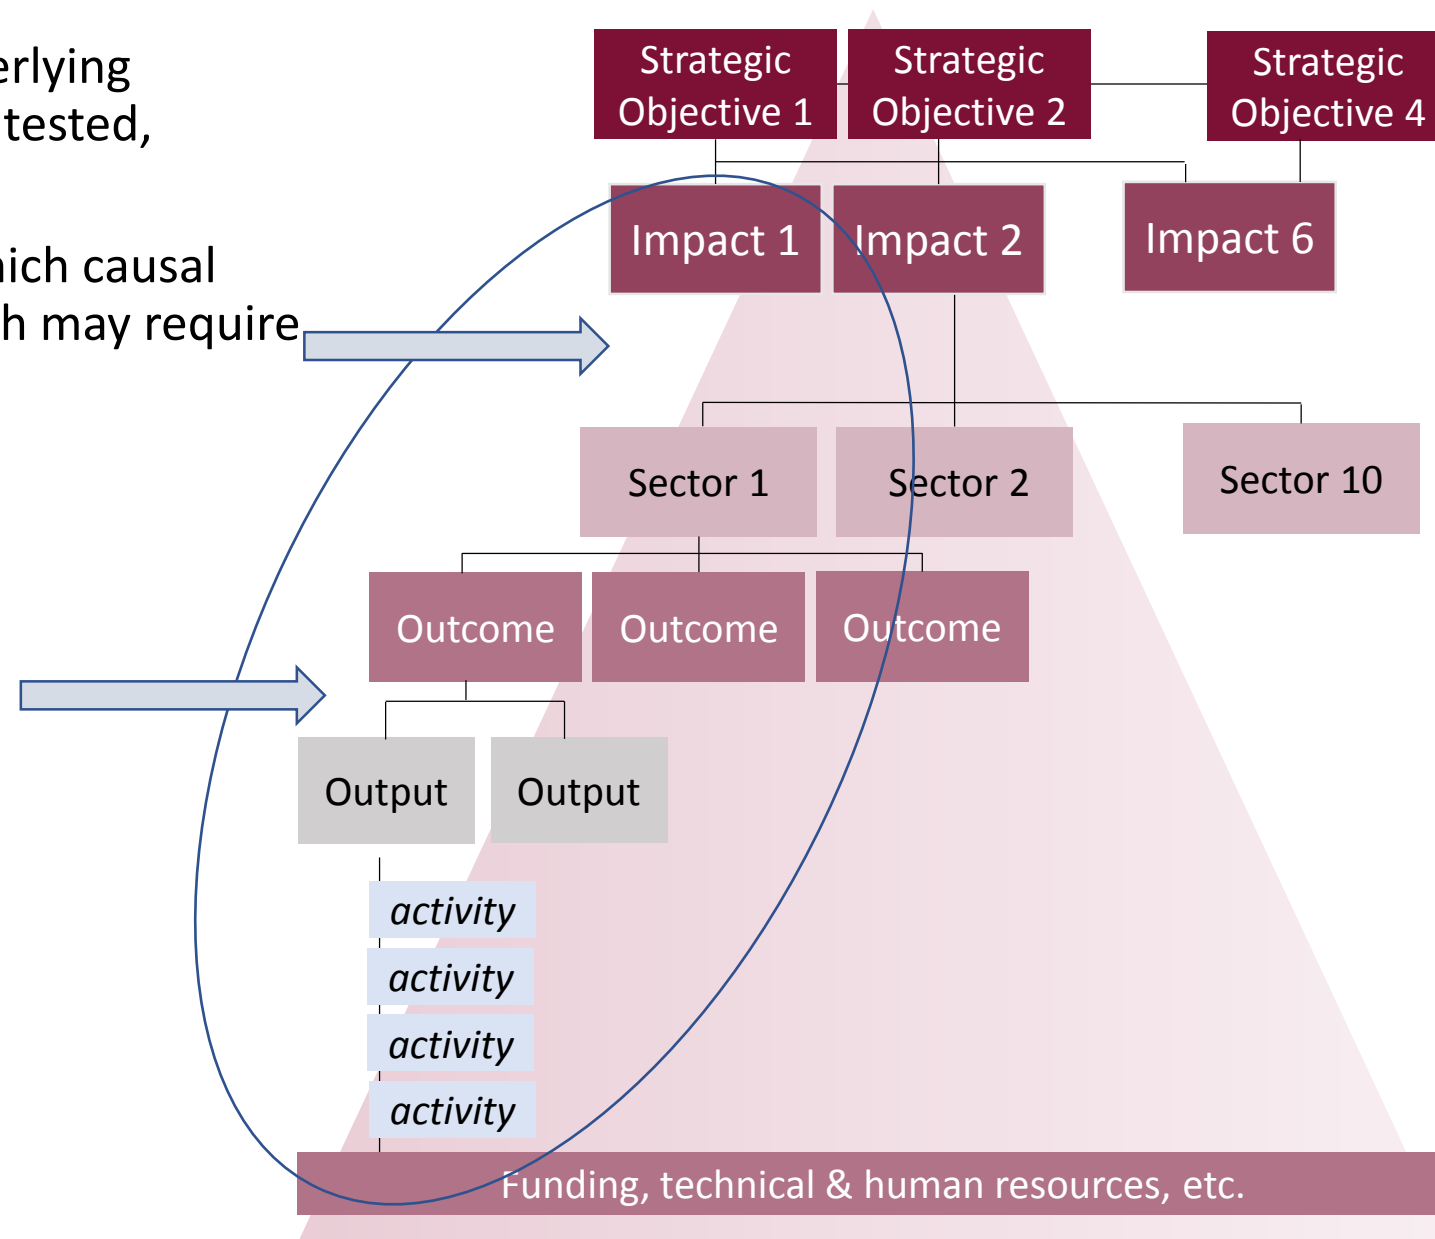

Change is rarely linear!

- Objective
- What is a Theory of Change
- What is the value of a Theory of Change
- How is a Theory of Change presented
- How to create a Theory of Change
- Quality assurance checklist

HOW TO CREATE A THEORY OF CHANGE – RISKS & ASSUMPTIONS

- ToC requires you articulate underlying assumptions which can then be tested, evaluated, and measured
- ToC requires you understand which causal linkages are strongest, and which may require more research and evaluation.

- Objective
- What is a Theory of Change
- What is the value of a Theory of Change
- How is a Theory of Change presented
- How to create a Theory of Change
- Quality assurance checklist

HOW TO CREATE A THEORY OF CHANGE – RISKS & ASSUMPTIONS

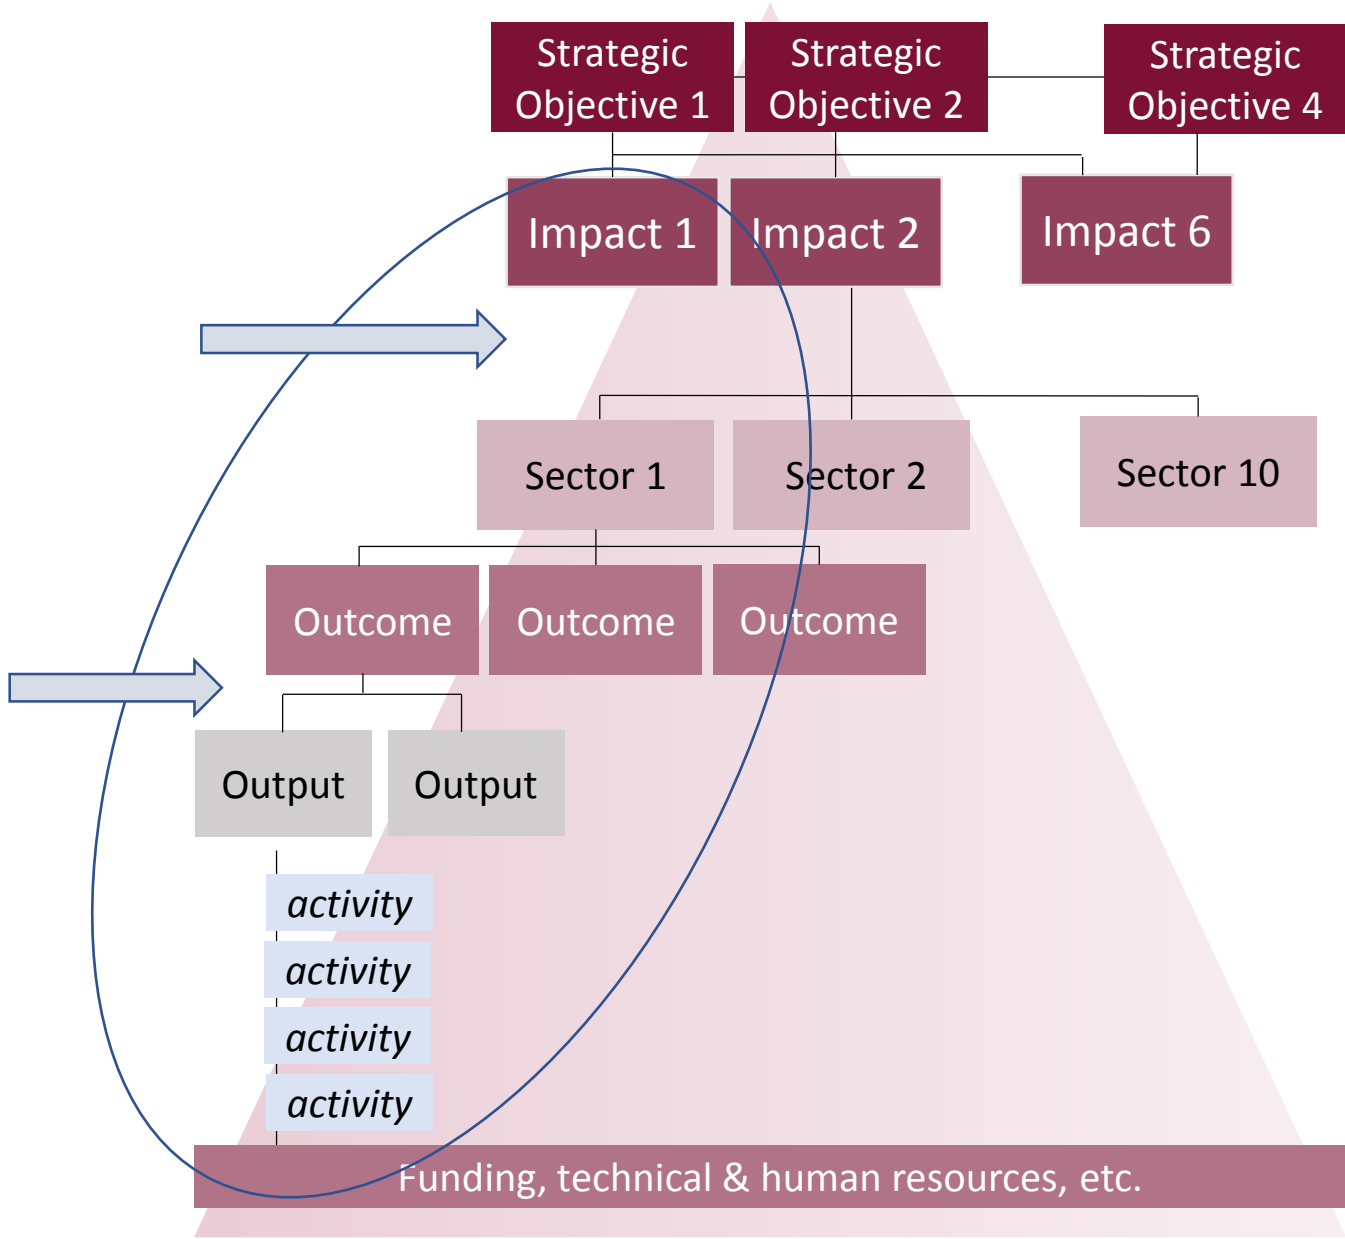

• **Example of assumptions in Basic Assistance:**

“In order to achieve LCRP impacts, we assume that...

1- “... MPC beneficiaries have access to markets, service providers and civil authorities”

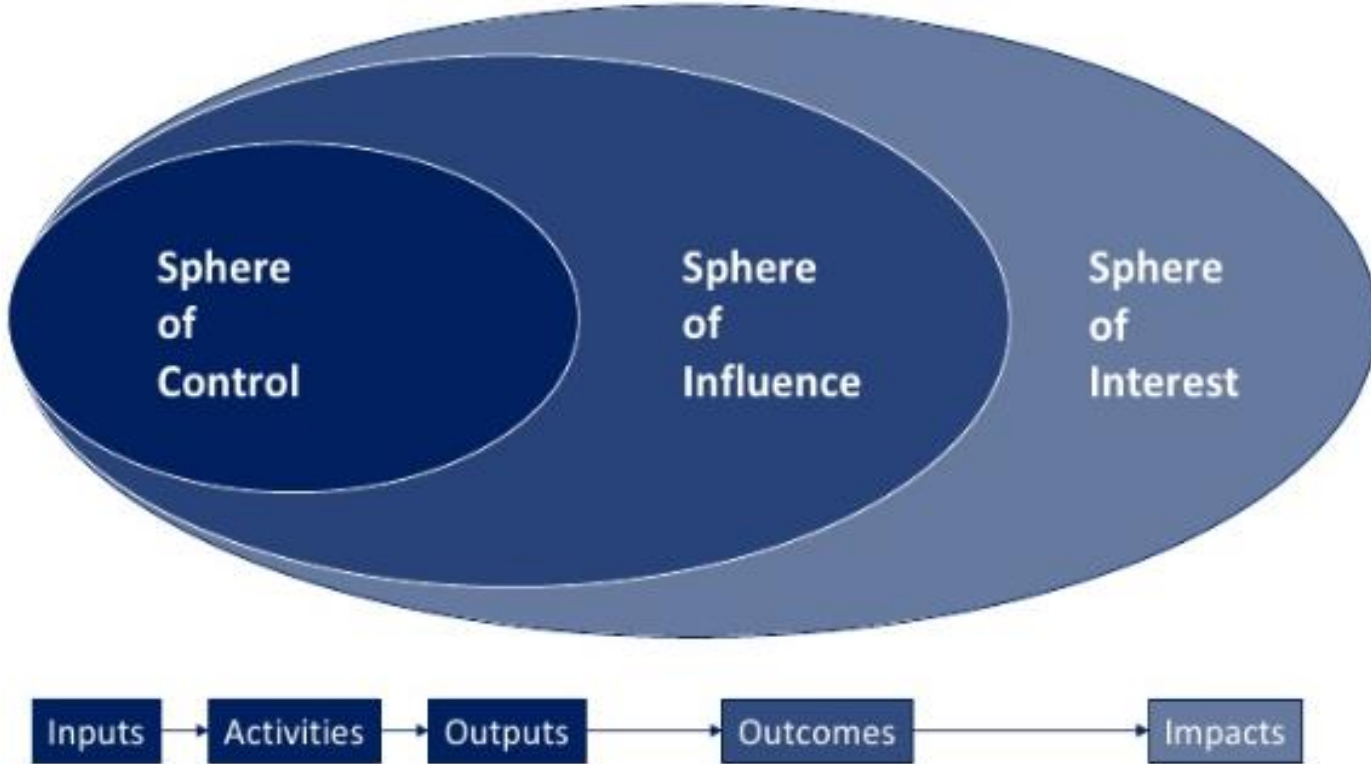

2- We also assume that “... MPC beneficiaries do not save any amount of their assistance before meeting their basic needs”

- Objective
- What is a Theory of Change
- What is the value of a Theory of Change
- How is a Theory of Change presented
- How to create a Theory of Change
- Quality assurance checklist

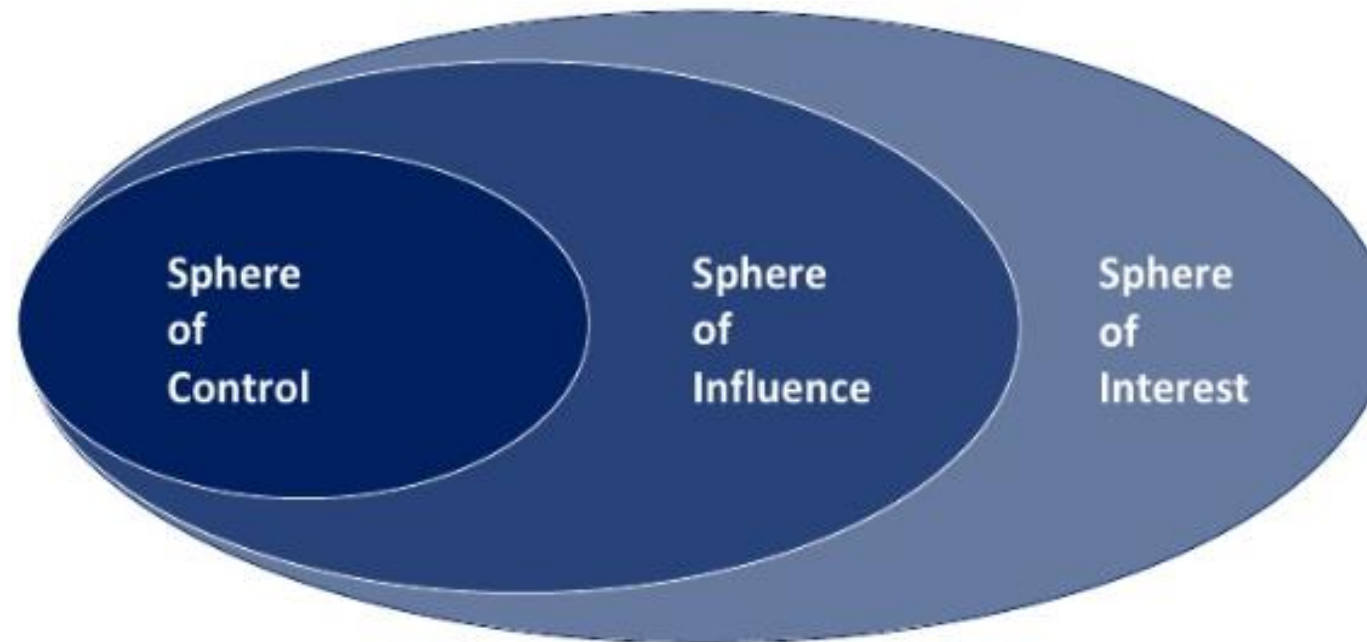

- Think through your results chain (the core of your ToC), from sector inputs to overall impact
- **Outputs** are short term results, which are achieved immediately after an activity has taken place. They are considered **within the sphere of control** of the sector.
- **Outcomes** are medium term results, which may take a few years to achieve. Being within the **sphere of influence** of the sector
- **Impact** is the highest level outcome, and is often the ultimate goal, that may take many years to change.
- Outside the sphere of control or influence, but by working with a wide range of **stakeholders**, the sector can build a likely story that it is making a stronger contribution to LCRP impact

- Objective
- What is a Theory of Change
- What is the value of a Theory of Change
- How is a Theory of Change presented
- How to create a Theory of Change
- Quality assurance checklist

- A stakeholder mapping is a first step to help you better understand your sector's sphere of influence
- Identify and understand the other stakeholders who also influence this sphere
- Identify partnerships, through which your sphere of control or influence might even expand
- The theory of change should help clarify:
 - which partner does what,
 - in which areas two or more entities are expected to work together,
 - where collaboration is necessary to achieve the expected change, and
 - how to avoid overlapping to maximize the use of available resources.

Objective

What is a Theory of Change

What is the value of a Theory of Change

How is a Theory of Change presented

How to create a Theory of Change

Quality assurance checklist

1. Validate the **focus** of the ToC
2. Identify **solutions** to the problems that need to be addressed
3. Validate the **division of labour** among partners and partnership strategies
4. Identify and test **risks & assumptions** based on available evidence

How is a Theory of Change presented

How to create a Theory of Change

Quality assurance checklist

THEORY OF CHANGE NARRATIVE – QUALITY ASSURANCE CHECK LIST

Quality assurance checklist to ensure a theory of change:	YES / NO
Is based on a collaborative and participatory process , involving multiple stakeholder perspectives and allowing the views of women, youth, duty-bearers, claim-holders and vulnerable communities to be reflected during theory of change development and validation	
Is clearly targeted towards changes that will benefit the most vulnerable and marginalized individuals and groups	
Shows a plausible, clear, logical flow to describe how the planned intervention intends to contribute to the desired changes at outcome and impact level, without any gaps in logic	
Is ideally presented with a diagram and embedded in the narrative of sector chapters	
Refers to evidence , knowledge and lessons learned from credible sources such as evaluations, assessments, monitoring, surveys, as well as to national capacity assessments and strategies	
Clearly states assumptions and risks most relevant to whether change will be realized	
Identifies who does what within the sector, as well as any other key partners and actors whose common effort will be required <u>in order for change to take place</u>	
Identifies limitations in the available evidence basis for the theory of change that can be used to test the assumptions and the pathway of change	
Envisages sustainable and inclusive changes by looking to strengthen the effectiveness of institutions and mechanisms that are tasked to monitor, track and empower those who are left behind or at the risk of being left behind	
Addresses issues of inequality and discrimination by tackling root and underlying causes in addition to immediate causes	
Addresses or mitigates structural causes of violence and conflict that lead to or result from violation or non-fulfilment of rights	
Explicitly targets women and girls and ensures that they are equal beneficiaries of change	
Addresses poverty-environment linkages and contributes to enhancing sustainability

What is the value of a Theory of Change

How is a Theory of Change presented

How to create a Theory of Change

Quality assurance checklist

Quality assurance checklist to ensure a theory of change:	STATUS	Comments
Is based on a collaborative and participatory process , involving multiple stakeholder perspectives and allowing the views of women, youth, duty-bearers, claim-holders and vulnerable communities to be reflected during theory of change development and validation	Green	<u>SitAn</u> and strategy done in a participatory manner
Is clearly targeted towards changes that will benefit the most vulnerable and marginalized individuals and groups	Green	Clear description of target groups
Shows a plausible, clear, logical flow to describe how the sector strategy intends to contribute to the desired changes at outcome and impact level, without any gaps in logic	Yellow	Outputs to outcomes ok, but needs to clarify sector outcomes' contribution to LCRP impact
Is ideally presented with a diagram and embedded in the narrative of the sector chapter	Yellow	Diagram: no Narrative: yes
Refers to evidence , knowledge and lessons learned from credible sources such as evaluations, assessments, monitoring, surveys, as well as to national capacity assessments and strategies	Yellow	Evidence and research are well used for the <u>SitAn</u> , less so to justify chosen outputs or outcomes
Clearly states assumptions and risks most relevant to whether change will be realized	Red	There is little mention of any assumption and risk
Identifies who does what within the sector, as well as any other key partners and actors whose common effort will be required <u>in order for</u> change to take place	Red	Partners involved and having influence on results should be mentioned
Identifies limitations in the available evidence basis for the theory of change that can be used to test the assumptions and the pathway of change	Red	No mention of learning needs, knowledge gaps

THEORY OF CHANGE NARRATIVE – QUALITY ASSURANCE CHECK LIST

Envisages sustainable and inclusive changes by looking to strengthen the effectiveness of institutions and mechanisms that are tasked to monitor, track and empower those who are left behind or at the risk of being left behind		Institutions strengthening is one of the <u>priority</u> mentioned in the strategy
Addresses issues of inequality and discrimination by tackling root and underlying causes in addition to immediate causes		In the <u>SitAn</u> , backed up with evidence
Addresses or mitigates structural causes of violence and conflict that lead to or result from violation or non-fulfilment of rights		As a cross-cutting issue
Explicitly targets women and girls and ensures that they are equal beneficiaries of change		As a cross-cutting issue, yet not enough disaggregated data in the narrative
Addresses humanitarian-development-environment linkages and contributes to enhancing sustainability		There is little elaboration on this, though a section on stabilization and institutional strengthening

HOW TO CREATE A THEORY OF CHANGE – 2 RISKS & ASSUMPTIONS

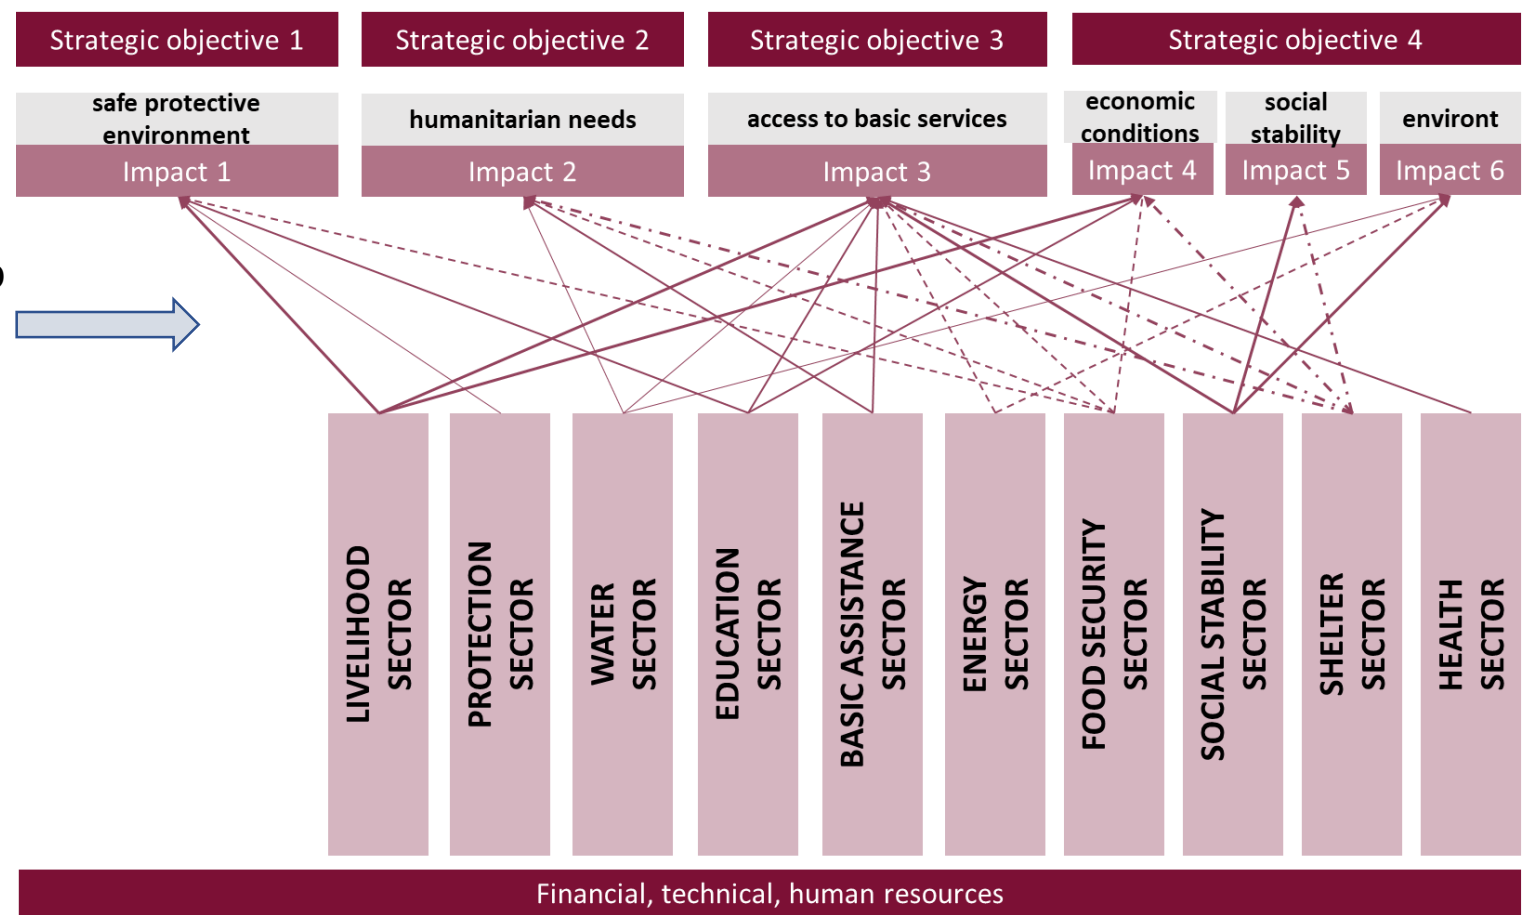

Example of assumptions in Basic Assistance:

In order to achieve impacts 2 and 3, we assume that:

1- *“MPC beneficiaries have access to markets, service providers and civil authorities”*, e.g. that beneficiaries can spend their assistance, without facing any restrictions in accessing markets to buy food, health and education related items, service providers (school and medical centers) and civil authorities.

2- We can also assume that *“MPC beneficiaries do not save any amount of their assistance before meeting their basic needs”*. Once these are met, households may decide to allocate excess cash into savings

- Background
- Analysis of LCRP logic
- Purpose of LCRP M&E system
- Funding & results monitoring levels
- Monitoring of commitments
- Inter-sector Key Evaluation Questions
- Required research, assessments and surveys
- LCRP data system
- Inter-sector reporting
- Dissemination of information
- Key evaluation milestones
