

## Background and methodology

Since August 2017, an estimated 741,000 Rohingya refugees have fled from Myanmar into Cox's Bazar, Bangladesh, increasing the total number to around 914,998.<sup>1</sup> The majority are reliant on overstretched humanitarian assistance, services, and resources including shelter, food, clean water, and sanitation. Information on Rohingya households, particularly in relation to protection and access to services, is in need of regular updating due to the variation in service provision across settlements, challenges presented by the monsoon and cyclone seasons, and the evolving social and contextual dynamics within each settlement. Therefore, REACH, in partnership with UNHCR, continued Round 6 of the Settlement and Protection Profiling (SPP) Assessment in order to support evidence based monitoring and analysis of cross-cutting protection issues in Rohingya refugee settlements.

The sixth round of SPP was conducted in 33 out of 34 refugee camps and settlements in Cox's Bazar District from 28 October - 28 November, 2019. Kutupalong Registered Camp was not included due to access constraints. A total of 3,474 households were interviewed across the 33 camps. Findings from this assessment are generalisable with 95% confidence level and 2% margin of error at the overall response level. Surveys were conducted with households selected through simple random sampling of shelter footprints. Translators Without Borders supported with translating the form into Rohingya.

This factsheet presents findings disaggregated by the gender of the respondent, with data for female respondents in **dark blue** and data for male respondents in **light blue**. Survey respondents were adult household members most knowledgeable about household affairs and who consented to answer questions on behalf of the household and consisted of 1,714 female and 1,760 male respondents. Respondents were interviewed by enumerators of their same gender. Findings disaggregated by the gender of respondent are generalisable with a 3% margin of error, meaning that differences greater than 6% are likely to be significant. Questions asked only to a subset of households require an even larger difference in order to be significant.

1. RRRC/UNHCR population data and key demographic indicators, 30 September 2019.

<https://data2.unhcr.org/en/documents/details/71792>

2. For definitions of key terms relating to special needs and disability, refer to UNHCR "Guidance on the Use of Standardized Specific Needs Codes" <https://bit.ly/2GnJE0h>.

3. For this round of data collection, disability was measured at the household level using the Washington Group Short Set of questions on disability. According to this methodology, 'disability' is determined as anyone in the household having at least 'a lot of difficulty' following six domains: walking, seeing, hearing, cognition, self-care, and communication.

4. Respondents could give up to three answers.

## Demographics

Household composition by gender and age:

**52%** of individuals are under 18  
**77%** of individuals are women and children

There is an average of **4.9** individuals reported per household

**8%** of households reported the presence of members with disabilities<sup>3</sup>

■ November 2019 ■ July 2019

# Settlement and Protection Profiling

## Camp 2E Ukhiya, Cox's Bazar, Bangladesh

July 2019 and November 2019 comparison

Round 6

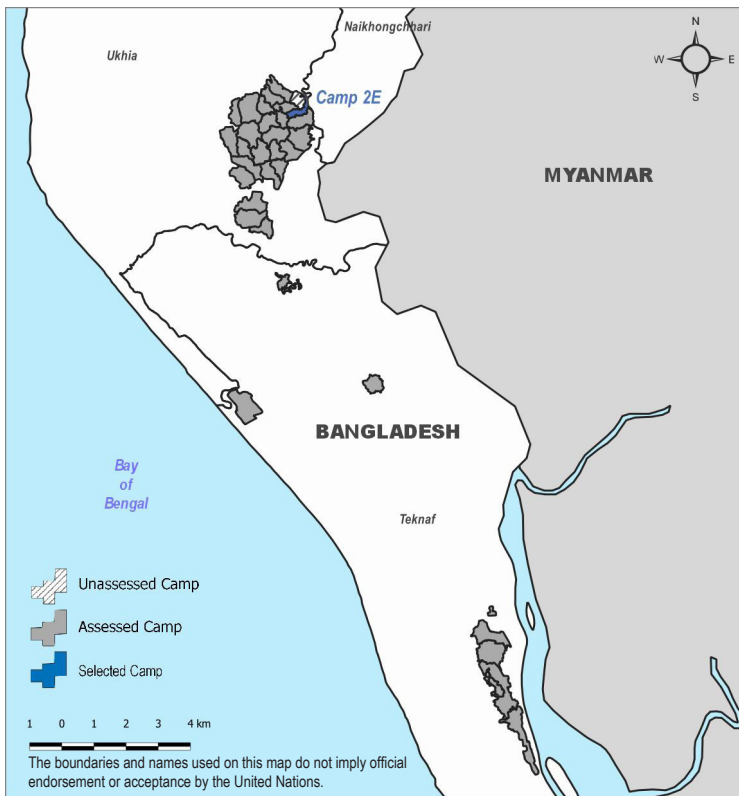

November 2019

### Background and methodology

Since August 2017, an estimated 741,000 Rohingya refugees have fled from Myanmar into Cox's Bazar, Bangladesh, increasing the total number to around 914,998.<sup>1</sup> The majority are reliant on overstretched humanitarian assistance, services, and resources including shelter, food, clean water, and sanitation. Information on Rohingya households, particularly in relation to protection and access to services, is in need of regular updating due to the variation in service provision across settlements, challenges presented by the monsoon and cyclone seasons, and the evolving social and contextual dynamics within each settlement. Therefore, REACH, in partnership with UNHCR, continued Round 6 of the Settlement and Protection Profiling (SPP) Assessment in order to support evidence-based monitoring and analysis of cross-cutting protection issues in Rohingya refugee settlements.

The sixth round of SPP was conducted in 33 out of 34 refugee camps and settlements in Cox's Bazar District from 28 October - 28 November, 2019. Surveys were conducted with households selected through simple random sampling of shelter footprints. Translators Without Borders supported with translating the form into Rohingya. Results of this assessment are generalisable to the population of each camp with a 95% confidence level and 10% margin of error. This factsheet presents an analysis of data collected in Camp 2E, where 112 households were surveyed.

Where relevant, findings are compared to those of SPP Round 5 which took place from 25 June - 5 August, 2019.<sup>2</sup> November 2019 data is presented in **dark blue**, and July 2019 data is presented in **light blue**.

### Key Camp Information

Camp Management	RRRC
Site Management Support	UNHCR / DRC
Population (individuals) <sup>1</sup>	30,168
Population (families) <sup>1</sup>	7,299
Camp Area	0.39 km <sup>2</sup>
Population density	74,185 individuals/km <sup>2</sup>

### Demographics

Household composition by gender and age:

**50%** of individuals are under 18  
**76%** of individuals are women and children

There is an average of **4.6** individuals reported per household

**5%** of households reported the presence of members with disabilities<sup>4</sup>

### From UNHCR Key Demographic Indicators dataset<sup>1</sup>

% of families with Persons with Specific Needs (PSN), by need<sup>3</sup>

Separated children	2%	Unaccompanied children	1%
Older person at risk	3%	Person with disability	4%
Older person at risk with children	3%	Single male parent with infants	1%
Serious medical condition	4%	Single female parent	17%
Families with PSN	<b>31%</b>		

**31%** of households arrived on 25 August 2017 or later

### Protection

Five most frequently reported interventions needed to improve the sense of safety and security in the camps<sup>5</sup>:

November 2019		July 2019	
<b>56%</b>	Improved paths and roads	<b>1</b>	Improved paths and roads <b>56%</b>

# Settlement and Protection Profiling

Camp 4 Ukhiya, Cox's Bazar, Bangladesh

July 2019 and November 2019 comparison

Round 6

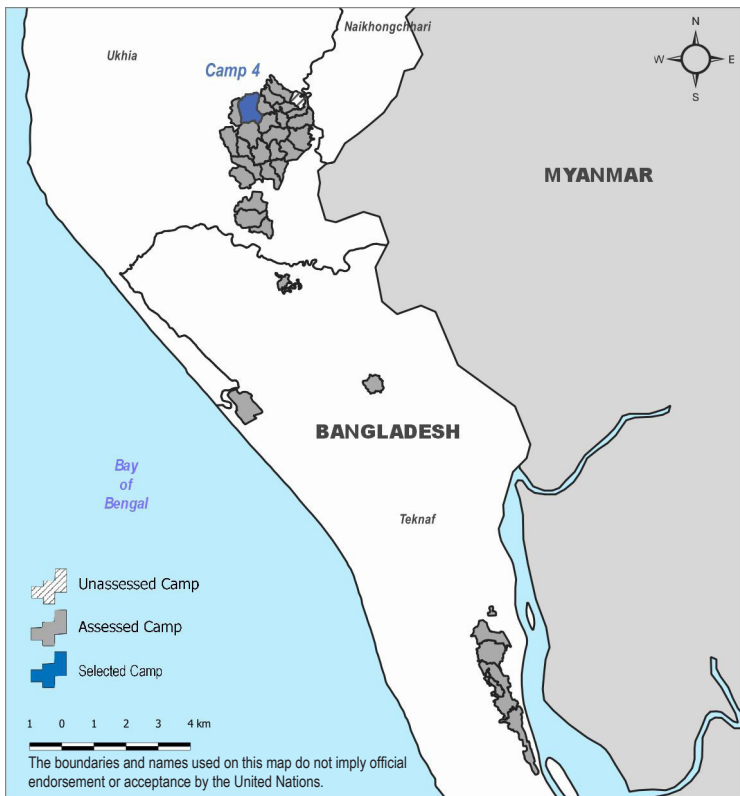

November 2019

## Background and methodology

Since August 2017, an estimated 741,000 Rohingya refugees have fled from Myanmar into Cox's Bazar, Bangladesh, increasing the total number to around 914,998.<sup>1</sup> The majority are reliant on overstretched humanitarian assistance, services, and resources including shelter, food, clean water, and sanitation. Information on Rohingya households, particularly in relation to protection and access to services, is in need of regular updating due to the variation in service provision across settlements, challenges presented by the monsoon and cyclone seasons, and the evolving social and contextual dynamics within each settlement. Therefore, REACH, in partnership with UNHCR, continued Round 6 of the Settlement and Protection Profiling (SPP) Assessment in order to support evidence-based monitoring and analysis of cross-cutting protection issues in Rohingya refugee settlements.

The sixth round of SPP was conducted in 33 out of 34 refugee camps and settlements in Cox's Bazar District from 28 October - 28 November, 2019. Surveys were conducted with households selected through simple random sampling of shelter footprints. Translators Without Borders supported with translating the form into Rohingya. Results of this assessment are generalisable to the population of each camp with a 95% confidence level and 10% margin of error. This factsheet presents an analysis of data collected in Camp 4, where 108 households were surveyed.

Where relevant, findings are compared to those of SPP Round 5 which took place from 25 June - 5 August, 2019.<sup>2</sup> November 2019 data is presented in **dark blue**, and July 2019 data is presented in **light blue**.

## Key Camp Information

Camp Management	RRRC
Site Management Support	UNHCR / ACTED
Population (individuals) <sup>1</sup>	32,389
Population (families) <sup>1</sup>	7,947
Camp Area	1.16 km <sup>2</sup>
Population density	26,490 individuals/km <sup>2</sup>

## Demographics

Household composition by gender and age:

**54%** of individuals are under 18  
**79%** of individuals are women and children

There is an average of **4.8** individuals reported per household

**6%** of households reported the presence of members with disabilities<sup>4</sup>

## From UNHCR Key Demographic Indicators dataset<sup>1</sup>

% of families with Persons with Specific Needs (PSN), by need<sup>3</sup>

Separated children	3%	Unaccompanied children	1%
Older person at risk	4%	Person with disability	3%
Older person at risk with children	3%	Single male parent with infants	1%
Serious medical condition	4%	Single female parent	19%
Families with PSN	<b>33%</b>		

**95%** of households arrived on 25 August 2017 or later

## Protection

Five most frequently reported interventions needed to improve the sense of safety and security in the camps<sup>5</sup>:

November 2019	Intervention	July 2019
44%	Increased community watch groups ①	Advice about safety issues 45%
44%	Advice about safety issues ②	Improved paths and roads 43%
33%	Improved paths and roads ③	Natural disaster warning system 32%
31%	Better camp management ④	Better camp management 26%
22%	Natural disaster warning system ⑤	Increased community watch groups 21%

# Settlement and Protection Profiling

## Camp 6 Ukhiya, Cox's Bazar, Bangladesh

July 2019 and November 2019 comparison

Round 6

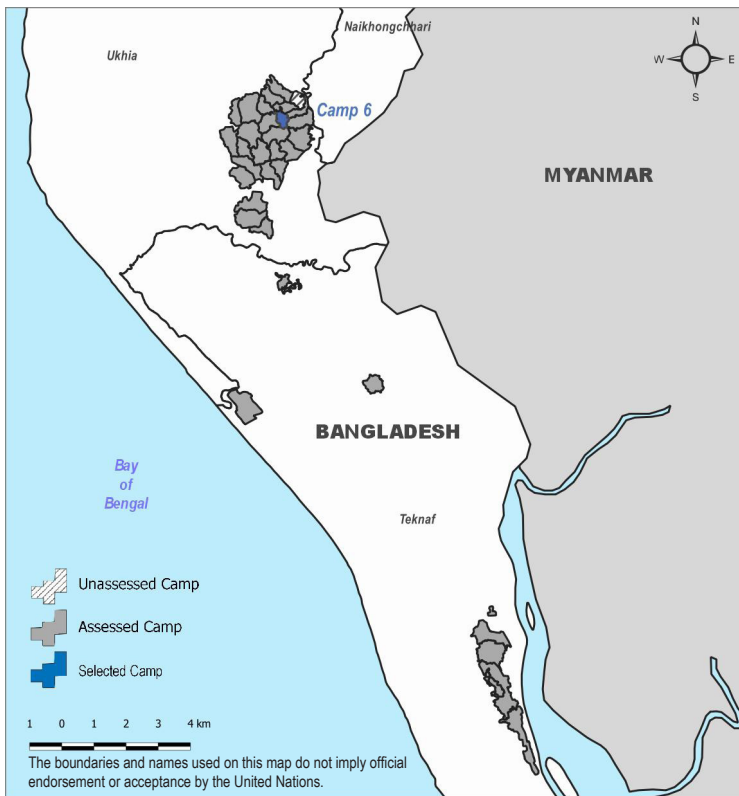

November 2019

### Background and methodology

Since August 2017, an estimated 741,000 Rohingya refugees have fled from Myanmar into Cox's Bazar, Bangladesh, increasing the total number to around 914,998.<sup>1</sup> The majority are reliant on overstretched humanitarian assistance, services, and resources including shelter, food, clean water, and sanitation. Information on Rohingya households, particularly in relation to protection and access to services, is in need of regular updating due to the variation in service provision across settlements, challenges presented by the monsoon and cyclone seasons, and the evolving social and contextual dynamics within each settlement. Therefore, REACH, in partnership with UNHCR, continued Round 6 of the Settlement and Protection Profiling (SPP) Assessment in order to support evidence-based monitoring and analysis of cross-cutting protection issues in Rohingya refugee settlements.

The sixth round of SPP was conducted in 33 out of 34 refugee camps and settlements in Cox's Bazar District from 28 October - 28 November, 2019. Surveys were conducted with households selected through simple random sampling of shelter footprints. Translators Without Borders supported with translating the form into Rohingya. Results of this assessment are generalisable to the population of each camp with a 95% confidence level and 10% margin of error. This factsheet presents an analysis of data collected in Camp 6, where 106 households were surveyed.

Where relevant, findings are compared to those of SPP Round 5 which took place from 25 June - 5 August, 2019.<sup>2</sup> November 2019 data is presented in **dark blue**, and July 2019 data is presented in **light blue**.

### Key Camp Information

Camp Management	RRRC
Site Management Support	UNHCR / DRC
Population (individuals) <sup>1</sup>	24,931
Population (families) <sup>1</sup>	5,804
Camp Area	0.36 km <sup>2</sup>
Population density	67,854 individuals/km <sup>2</sup>

### Demographics

Household composition by gender and age:

**56%** of individuals are under 18  
**78%** of individuals are women and children

There is an average of **5.2** individuals reported per household

**11%** of households reported the presence of members with disabilities<sup>4</sup>

### From UNHCR Key Demographic Indicators dataset<sup>1</sup>

% of families with Persons with Specific Needs (PSN), by need<sup>3</sup>

Separated children	3%	Unaccompanied children	1%

# Settlement and Protection Profiling

## Camp 8W Ukhiya, Cox's Bazar, Bangladesh

July 2019 and November 2019 comparison

Round 6

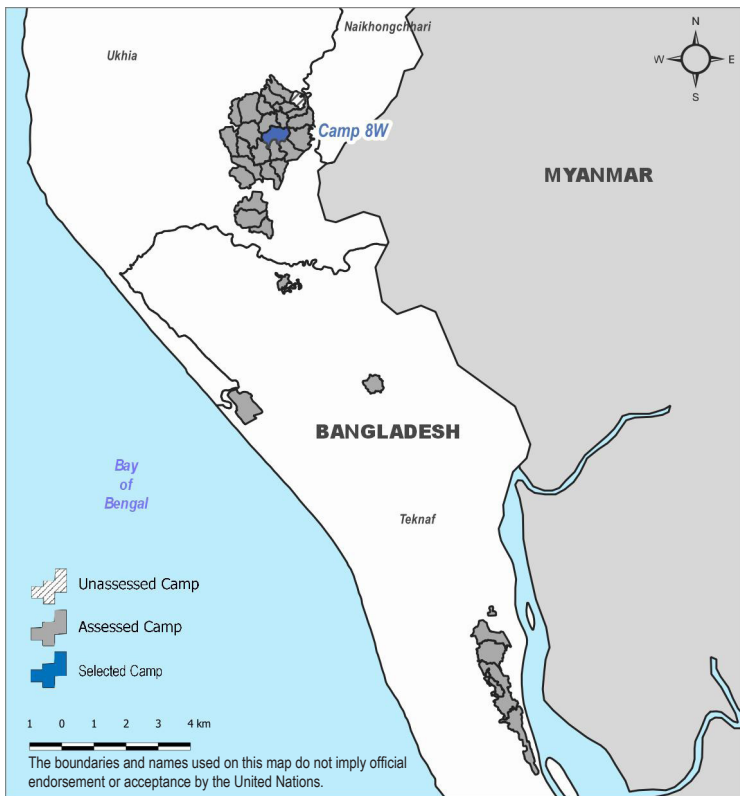

November 2019

### Background and methodology

Since August 2017, an estimated 741,000 Rohingya refugees have fled from Myanmar into Cox's Bazar, Bangladesh, increasing the total number to around 914,998.<sup>1</sup> The majority are reliant on overstretched humanitarian assistance, services, and resources including shelter, food, clean water, and sanitation. Information on Rohingya households, particularly in relation to protection and access to services, is in need of regular updating due to the variation in service provision across settlements, challenges presented by the monsoon and cyclone seasons, and the evolving social and contextual dynamics within each settlement. Therefore, REACH, in partnership with UNHCR, continued Round 6 of the Settlement and Protection Profiling (SPP) Assessment in order to support evidence-based monitoring and analysis of cross-cutting protection issues in Rohingya refugee settlements.

The sixth round of SPP was conducted in 33 out of 34 refugee camps and settlements in Cox's Bazar District from 28 October - 28 November, 2019. Surveys were conducted with households selected through simple random sampling of shelter footprints. Translators Without Borders supported with translating the form into Rohingya. Results of this assessment are generalisable to the population of each camp with a 95% confidence level and 10% margin of error. This factsheet presents an analysis of data collected in Camp 8W, where 99 households were surveyed.

Where relevant, findings are compared to those of SPP Round 5 which took place from 25 June - 5 August, 2019.<sup>2</sup> November 2019 data is presented in **dark blue**, and July 2019 data is presented in **light blue**.

### Key Camp Information

# Settlement and Protection Profiling

## Camp 11 Ukhiya, Cox's Bazar, Bangladesh

July 2019 and November 2019 comparison

Round 6

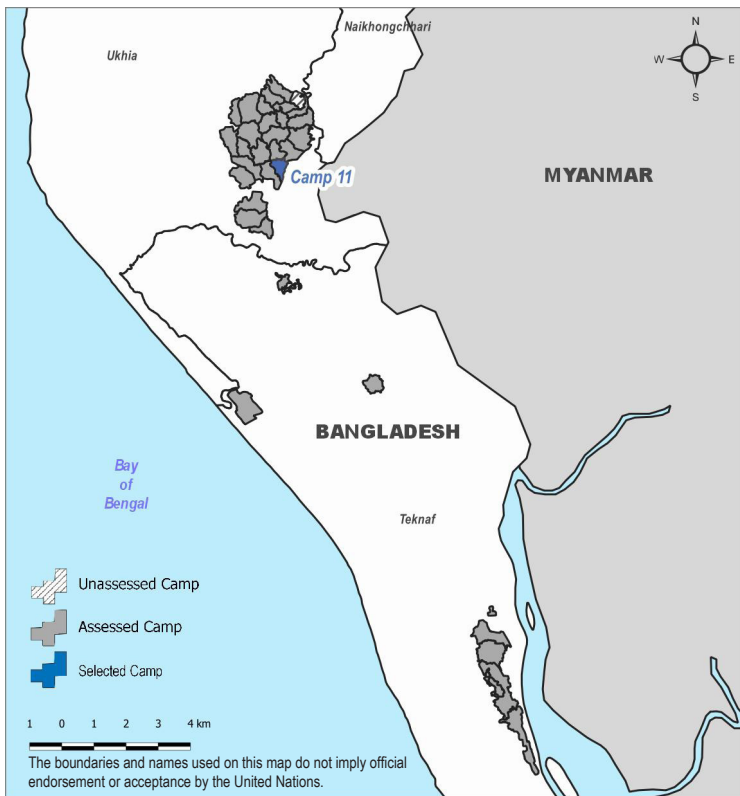

November 2019

### Background and methodology

Since August 2017, an estimated 741,000 Rohingya refugees have fled from Myanmar into Cox's Bazar, Bangladesh, increasing the total number to around 914,998.<sup>1</sup> The majority are reliant on overstretched humanitarian assistance, services, and resources including shelter, food, clean water, and sanitation. Information on Rohingya households, particularly in relation to protection and access to services, is in need of regular updating due to the variation in service provision across settlements, challenges presented by the monsoon and cyclone seasons, and the evolving social and contextual dynamics within each settlement. Therefore, REACH, in partnership with UNHCR, continued Round 6 of the Settlement and Protection Profiling (SPP) Assessment in order to support evidence-based monitoring and analysis of cross-cutting protection issues in Rohingya refugee settlements.

The sixth round of SPP was conducted in 33 out of 34 refugee camps and settlements in Cox's Bazar District from 28 October - 28 November, 2019. Surveys were conducted with households selected through simple random sampling of shelter footprints. Translators Without Borders supported with translating the form into Rohingya. Results of this assessment are generalisable to the population of each camp with a 95% confidence level and 10% margin of error. This factsheet presents an analysis of data collected in Camp 11, where 101 households were surveyed.

Where relevant, findings are compared to those of SPP Round 5 which took place from 25 June - 5 August, 2019.<sup>2</sup> November 2019 data is presented in **dark blue**, and July 2019 data is presented in **light blue**.

### Demographics

Household composition by gender and age:

**52%** of individuals are under 18  
**78%** of individuals are women and children

There is an average of **4.9** individuals reported per household

**9%** of households reported the presence of members with disabilities<sup>4</sup>

### From UNHCR Key Demographic Indicators dataset<sup>1</sup>

% of families with Persons with Specific Needs (PSN), by need<sup>3</sup>

Separated children	2%	Unaccompanied children	1%
Older person at risk	4%	Person with disability	4%
Older person at risk with children	2%	Single male parent with infants	1%
Serious medical condition	3%	Single female parent	15%
Families with PSN	28%		

**85%** of households arrived on 25 August 2017 or later

### Protection

Five most frequently reported interventions needed to improve the sense of safety and security in the camps<sup>5</sup>:

November 2019		July 2019
58%	Improved paths and roads	80%
40%	Advice about safety issues	42%
30%	Increased community watch groups	35%
29%	Better camp management	31%
23%	Locks in shelters	26%

■ November 2019 ■ July 2019

# Settlement and Protection Profiling

## Camp 14 Ukhiya, Cox's Bazar, Bangladesh

July 2019 and November 2019 comparison

Round 6

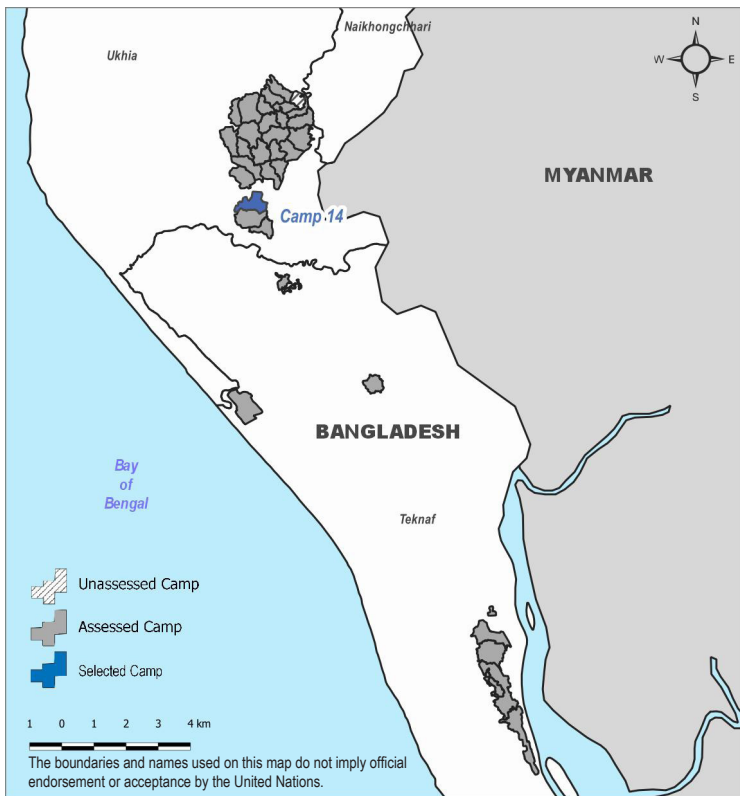

November 2019

### Background and methodology

Since August 2017, an estimated 741,000 Rohingya refugees have fled from Myanmar into Cox's Bazar, Bangladesh, increasing the total number to around 914,998.<sup>1</sup> The majority are reliant on overstretched humanitarian assistance, services, and resources including shelter, food, clean water, and sanitation. Information on Rohingya households, particularly in relation to protection and access to services, is in need of regular updating due to the variation in service provision across settlements, challenges presented by the monsoon and cyclone seasons, and the evolving social and contextual dynamics within each settlement. Therefore, REACH, in partnership with UNHCR, continued Round 6 of the Settlement and Protection Profiling (SPP) Assessment in order to support evidence-based monitoring and analysis of cross-cutting protection issues in Rohingya refugee settlements.

The sixth round of SPP was conducted in 33 out of 34 refugee camps and settlements in Cox's Bazar District from 28 October - 28 November, 2019. Surveys were conducted with households selected through simple random sampling of shelter footprints. Translators Without Borders supported with translating the form into Rohingya. Results of this assessment are generalisable to the population of each camp with a 95% confidence level and 10% margin of error. This factsheet presents an analysis of data collected in Camp 14, where 106 households were surveyed.

Where relevant, findings are compared to those of SPP Round 5 which took place from 25 June - 5 August, 2019.<sup>2</sup> November 2019 data is presented in **dark blue**, and July 2019 data is presented in **light blue**.

### Key Camp Information

Camp Management	RRRC
Site Management Support	IOM / ACF
Population (individuals) <sup>1</sup>	31,912
Population (families) <sup>1</sup>	7,049

# Settlement and Protection Profiling

## Camp 16 Ukhiya, Cox's Bazar, Bangladesh

July 2019 and November 2019 comparison

Round 6

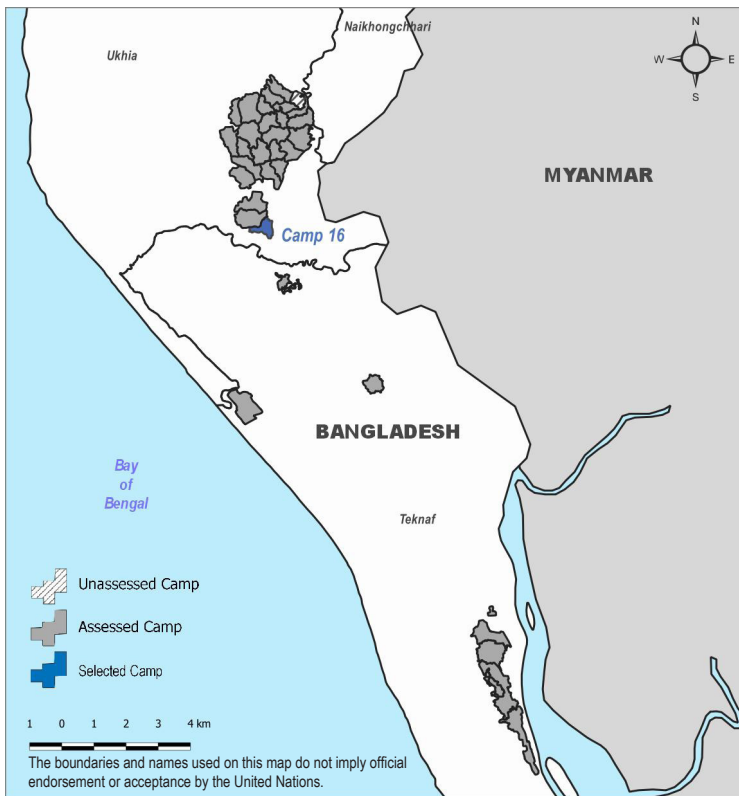

November 2019

### Background and methodology

Since August 2017, an estimated 741,000 Rohingya refugees have fled from Myanmar into Cox's Bazar, Bangladesh, increasing the total number to around 914,998.<sup>1</sup> The majority are reliant on overstretched humanitarian assistance, services, and resources including shelter, food, clean water, and sanitation. Information on Rohingya households, particularly in relation to protection and access to services, is in need of regular updating due to the variation in service provision across settlements, challenges presented by the monsoon and cyclone seasons, and the evolving social and contextual dynamics within each settlement. Therefore, REACH, in partnership with UNHCR, continued Round 6 of the Settlement and Protection Profiling (SPP) Assessment in order to support evidence-based monitoring and analysis of cross-cutting protection issues in Rohingya refugee settlements.

The sixth round of SPP was conducted in 33 out of 34 refugee camps and settlements in Cox's Bazar District from 28 October - 28 November, 2019. Surveys were conducted with households selected through simple random sampling of shelter footprints. Translators Without Borders supported with translating the form into Rohingya. Results of this assessment are generalisable to the population of each camp with a 95% confidence level and 10% margin of error. This factsheet presents an analysis of data collected in Camp 16, where 108 households were surveyed.

Where relevant, findings are compared to those of SPP Round 5 which took place from 25 June - 5 August, 2019.<sup>2</sup> November 2019 data is presented in **dark blue**, and July 2019 data is presented in **light blue**.

### Key Camp Information

Camp Management	RRRC
Site Management Support	IOM / CARE
Population (individuals) <sup>1</sup>	21,838
Population (families) <sup>1</sup>	4,889
Camp Area	0.52 km <sup>2</sup>
Population density	41,526 individuals/km <sup>2</sup>

### Demographics

Household composition by gender and age:

**53%** of individuals are under 18  
**76%** of individuals are women and children

There is an average of **4.8** individuals reported per household

**5%** of households reported the presence of members with disabilities<sup>4</sup>

### From UNHCR Key Demographic Indicators dataset<sup>1</sup>

% of families with Persons with Specific Needs (PSN), by need<sup>3</sup>

Separated children	2%	Unaccompanied children	0%
Older person at risk	4%	Person with disability	3%
Older person at risk with children	2%	Single male parent with infants	1%
Serious medical condition	3%	Single female parent	15%
Families with PSN	27%

# Settlement and Protection Profiling

## Camp 19 Ukhiya, Cox's Bazar, Bangladesh

July 2019 and November 2019 comparison

Round 6

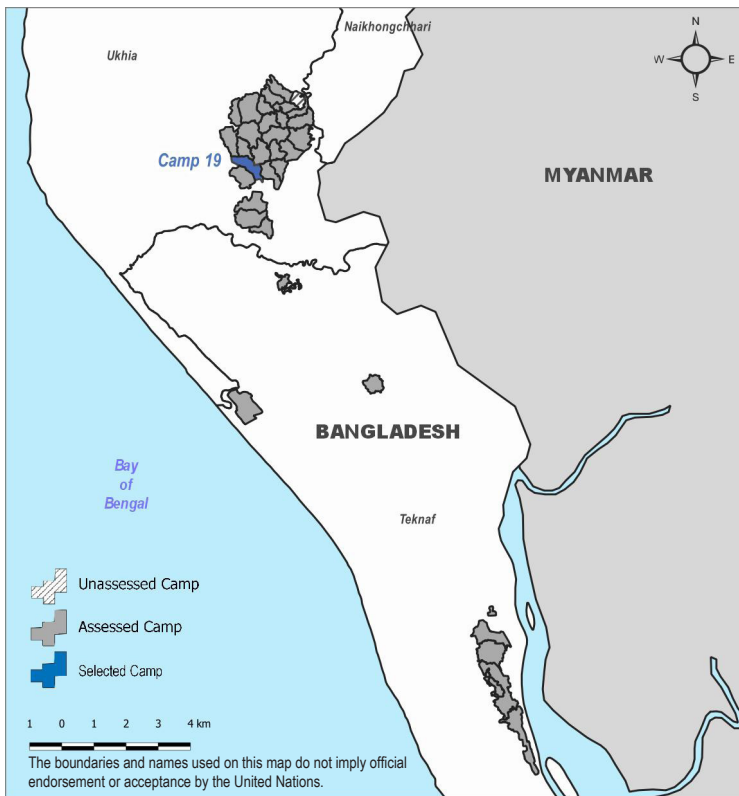

November 2019

### Background and methodology

Since August 2017, an estimated 741,000 Rohingya refugees have fled from Myanmar into Cox's Bazar, Bangladesh, increasing the total number to around 914,998.<sup>1</sup> The majority are reliant on overstretched humanitarian assistance, services, and resources including shelter, food, clean water, and sanitation. Information on Rohingya households, particularly in relation to protection and access to services, is in need of regular updating due to the variation in service provision across settlements, challenges presented by the monsoon and cyclone seasons, and the evolving social and contextual dynamics within each settlement. Therefore, REACH, in partnership with UNHCR, continued Round 6 of the Settlement and Protection Profiling (SPP) Assessment in order to support evidence-based monitoring and analysis of cross-cutting protection issues in Rohingya refugee settlements.

The sixth round of SPP was conducted in 33 out of 34 refugee camps and settlements in Cox's Bazar District from 28 October - 28 November, 2019. Surveys were conducted with households selected through simple random sampling of shelter footprints. Translators Without Borders supported with translating the form into Rohingya. Results of this assessment are generalisable to the population of each camp with a 95% confidence level and 10% margin of error. This factsheet presents an analysis of data collected in Camp 19, where 107 households were surveyed.

Where relevant, findings are compared to those of SPP Round 5 which took place from 25 June - 5 August, 2019.<sup>2</sup> November 2019 data is presented in **dark blue**, and July 2019 data is presented in **light blue**.

### Key Camp Information

Camp Management	RRRC
Site Management Support	IOM / IOM
Population (individuals) <sup>1</sup>	20,833

# Settlement and Protection Profiling

## Camp 20e Ukhiya, Cox's Bazar, Bangladesh

July 2019 and November 2019 comparison

Round 6

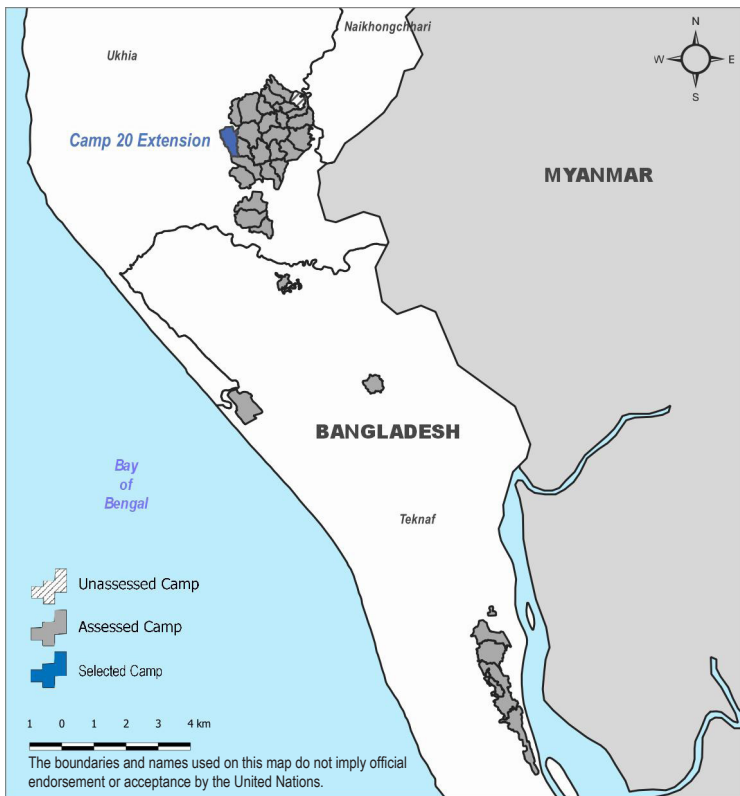

November 2019

### Background and methodology

Since August 2017, an estimated 741,000 Rohingya refugees have fled from Myanmar into Cox's Bazar, Bangladesh, increasing the total number to around 914,998.<sup>1</sup> The majority are reliant on overstretched humanitarian assistance, services, and resources including shelter, food, clean water, and sanitation. Information on Rohingya households, particularly in relation to protection and access to services, is in need of regular updating due to the variation in service provision across settlements, challenges presented by the monsoon and cyclone seasons, and the evolving social and contextual dynamics within each settlement. Therefore, REACH, in partnership with UNHCR, continued Round 6 of the Settlement and Protection Profiling (SPP) Assessment in order to support evidence-based monitoring and analysis of cross-cutting protection issues in Rohingya refugee settlements.

The sixth round of SPP was conducted in 33 out of 34 refugee camps and settlements in Cox's Bazar District from 28 October - 28 November, 2019. Surveys were conducted with households selected through simple random sampling of shelter footprints. Translators Without Borders supported with translating the form into Rohingya. Results of this assessment are generalisable to the population of each camp with a 95% confidence level and 10% margin of error. This factsheet presents an analysis of data collected in Camp 20e, where 94 households were surveyed.

Where relevant, findings are compared to those of SPP Round 5 which took place from 25 June - 5 August, 2019.<sup>2</sup> November 2019 data is presented in **dark blue**, and July 2019 data is presented in **light blue**.

### Key Camp Information

Camp Management	RRRC
Site Management Support	IOM / IOM
Population (individuals) <sup>1</sup>	4,587
Population (families) <sup>1</sup>	1,131
Camp Area	0.77 km <sup>2</sup>
Population density	5,191 individuals/km <sup>2</sup>

### Demographics

Household composition by gender and age:

**54%** of individuals are under 18  
**78%** of individuals are women and children

There is an average of **4.9** individuals reported per household

**6%** of households reported the presence of members with disabilities<sup>4</sup>

### From UNHCR Key Demographic Indicators dataset<sup>1</sup>

% of families with Persons with Specific Needs (PSN), by need<sup>3</sup>

Separated children	2%	Unaccompanied children	1%
Older person at risk	3%	Person with disability	4%
Older person at risk with children	2%	Single male parent with infants	1%
Serious medical condition	4%	Single female parent	15%
Families with PSN	28%		

**86%** of households arrived on 25 August 2017 or later

### Protection

Five most frequently reported interventions needed to improve the sense of safety and security in the camps<sup>5</sup>:

November 2019		July 2019		
40%	Natural disaster warning system	1	Advice about safety issues	57%
40%	Increased community watch groups	2	Improved paths and roads	48%
37%	Advice about safety issues	3	Better camp management	39%
31%	Improved paths and roads	4	Increased community watch groups	37%
30%	Better camp management	5	Natural disaster warning system	32%

1. RRRC/UNHCR population data and key demographic indicators, 30 September 2019.

2. UNHCR, Bangladesh: UNHCR Camp Settlement and Protection Profiling - Round 4, December 2018.

<https://data2.unhcr.org/en/documents/details/71873>

3. For definitions of key terms relating to special needs and disability, refer to UNHCR "Guidance on the Use of Standardized Specific Needs Codes" <https://bit.ly/2GnJE0h>.

4. For this round of data collection, disability was measured at the household level using the Washington Group Short Set of questions on disability. According to this methodology, 'disability' is determined as anyone in the household having at least 'a lot of difficulty' following six domains: walking, seeing, hearing, cognition, self-care, and communication.

5. Respondents could give up to three answers.

Three most frequently reported perceived risks faced by individuals in the camp<sup>6,7</sup>:

Three most frequently reported preferred sources of support for various forms of security incidents<sup>8</sup>:

	Involving self or family, with persons inside the camps		Involving self or family, with persons outside the camp		Witness to security incident within the camps	
	November 2019	July 2019	November 2019	July 2019	November 2019	July 2019
1	Mahji	Mahji	Camp-in-Charge	Mahji	Mahji	Mahji
2	Camp-in-Charge	Camp-in-Charge	Mahji	Camp-in-Charge	Camp-in-Charge	Camp-in-Charge
3	Community members	Army	Army	Army	Community members	Army

6. Respondents could give up to three answers.  
 7. These results are based on the respondent's subjective perception of risks in the camp, and not the actual number of security incidents.  
 8. Respondents could give multiple answers.  
 9. This question was asked to a subset of 45 households that reported a community watch group in their area.  
 10. This question was asked to a subset of 71 households that contained children under 5.  
 11. Findings on specific issues are reported as a percentage among households who report any issues accessing latrines.

### Food Security and Nutrition

November 2019 93% of households reported receiving food assistance in the month prior to data collection. Of these, the sources of assistance were<sup>8</sup>: July 2019 89%

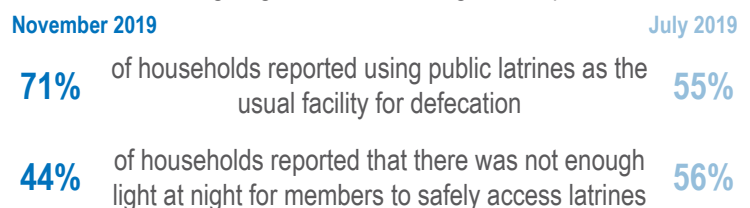

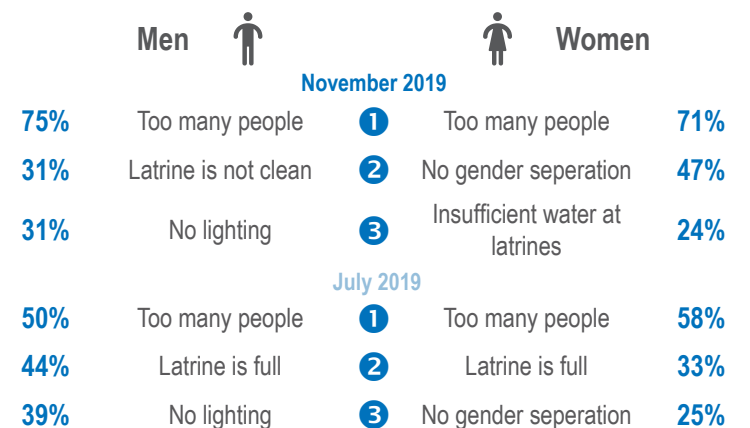

Three most frequently reported consumption coping strategies<sup>8</sup>:

### Water, Sanitation, and Hygiene

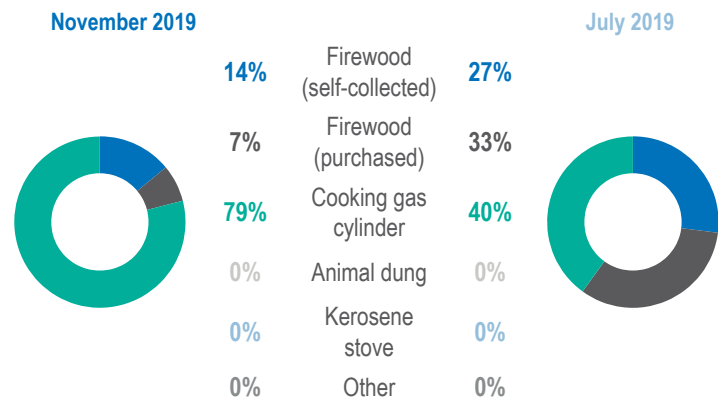

Three most frequently reported issues with latrines<sup>8,11</sup>:

## Shelter and Non-Food Items (NFIs)

% of households reported their main source of fuel:

**November 2019** **July 2019**

**100%** of households reported cooking inside their shelter **100%**

**65%** of households reported having a lock either inside or outside of their shelter **72%**

**89%** of households reported having a lock both inside and outside of their shelter **54%**

Three most frequently reported forms of support needed to address household shelter and NFI needs<sup>13</sup>:

November 2019	July 2019
<b>70%</b> Blanket <b>1</b>	Fuel <b>64%</b>
<b>44%</b> Mat <b>2</b>	Solar light <b>62%</b>
<b>41%</b> Mosquito net <b>3</b>	Cooking items <b>40%</b>

## Health

**November 2019** **July 2019**

**31%** of individuals reported having an illness serious enough to require medical treatment in the 30 days prior to data collection<sup>14</sup> **29%**

**58%** households reported being visited by a community health worker in the two weeks prior to data collection **41%**

Three most frequently reported challenges in accessing NGO clinics in the camps<sup>15</sup>:

November 2019	July 2019
<b>70%</b> Crowded <b>1</b>	Crowded <b>70%</b>
<b>51%</b> Supplies unavailable <b>2</b>	Supplies unavailable <b>49%</b>
<b>34%</b> Treatment unavailable <b>3</b>	Clinic too far away <b>32%</b>

13. Respondents could give up to three answers.

14. Respondents were asked to report information for each individual in their household. The denominator for this indicator is all individuals.

15. Respondents could give multiple responses.

16. In July, this question was asked to households with children under the age of 18. In November 2019, it was asked to all households reporting the presence of members aged between 3 and 18 years old.

## Education

**November 2019** **July 2019**

**94%** of households reported being satisfied or very satisfied with the education available in the camps<sup>16</sup> **98%**

Three most frequently reported education priorities for children<sup>14,16</sup>

<b>58%</b> Supplies <b>1</b>	Supplies <b>80%</b>
<b>44%</b> Better teachers <b>2</b>	Better teachers <b>49%</b>
<b>32%</b> Money for education <b>3</b>	Improved curriculum <b>27%</b>

## CwC and Site Management

Three most frequently reported preferred methods of receiving information<sup>15</sup>:

# Settlement and Protection Profiling

## Camp 23 Teknaf, Cox's Bazar, Bangladesh

July 2019 and November 2019 comparison

Round 6

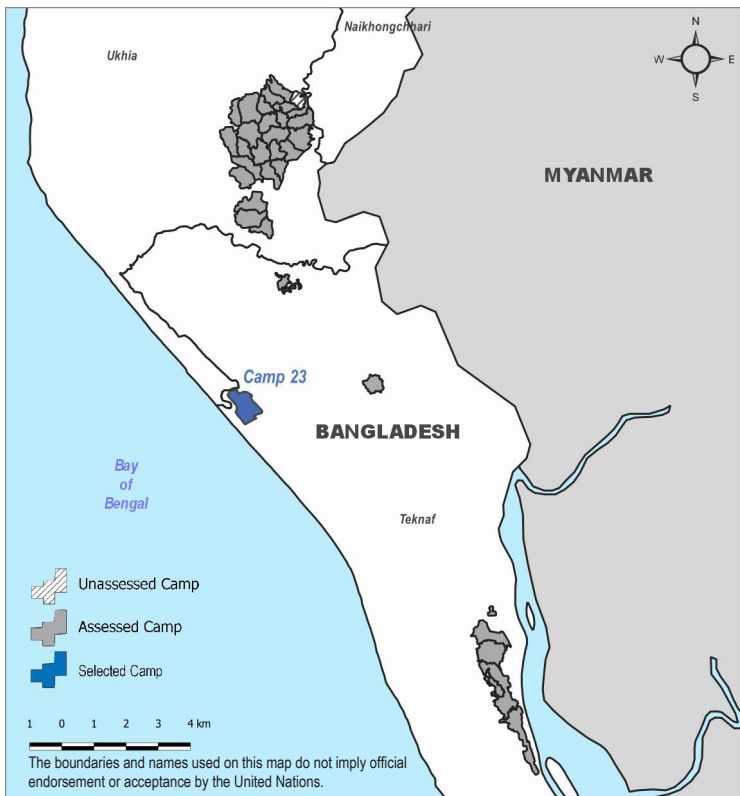

November 2019

### Background and methodology

Since August 2017, an estimated 741,000 Rohingya refugees have fled from Myanmar into Cox's Bazar, Bangladesh, increasing the total number to around 914,998.<sup>1</sup> The majority are reliant on overstretched humanitarian assistance, services, and resources including shelter, food, clean water, and sanitation. Information on Rohingya households, particularly in relation to protection and access to services, is in need of regular updating due to the variation in service provision across settlements, challenges presented by the monsoon and cyclone seasons, and the evolving social and contextual dynamics within each settlement. Therefore, REACH, in partnership with UNHCR, continued Round 6 of the Settlement and Protection Profiling (SPP) Assessment in order to support evidence-based monitoring and analysis of cross-cutting protection issues in Rohingya refugee settlements.

The sixth round of SPP was conducted in 33 out of 34 refugee camps and settlements in Cox's Bazar District from 28 October - 28 November, 2019. Surveys were conducted with households selected through simple random sampling of shelter footprints. Translators Without Borders supported with translating the form into Rohingya. Results of this assessment are generalisable to the population of each camp with a 95% confidence level and 10% margin of error. This factsheet presents an analysis of data collected in Camp 23, where 116 households were surveyed.

Where relevant, findings are compared to those of SPP Round 5 which took place from 25 June - 5 August, 2019.<sup>2</sup> November 2019 data is presented in **dark blue**, and July 2019 data is presented in **light blue**.

### Key Camp Information

Camp Management	RRRC
Site Management Support	IOM / IOM
Population (individuals) <sup>1</sup>	10,210
Population (families) <sup>1</sup>	2,488
Camp Area	2.65 km <sup>2</sup>
Population density	4,150 individuals/km <sup>2</sup>

### Demographics

Household composition by gender and age:

**52%** of individuals are under 18  
**79%** of individuals are women and children

There is an average of **4.9** individuals reported per household

**12%** of households reported the presence of members with disabilities<sup>4</sup>

### From UNHCR Key Demographic Indicators dataset<sup>1</sup>

% of families with Persons with Specific Needs (PSN), by need<sup>3</sup>

Separated children	2%	Unaccompanied children	0%
Older person at risk	4%	Person with disability	3%
Older person at risk with children	2%	Single male parent with infants	0%
Serious medical condition	3%	Single female parent	29%

# Settlement and Protection Profiling

## Camp 26 Teknaf, Cox's Bazar, Bangladesh

July 2019 and November 2019 comparison

Round 6

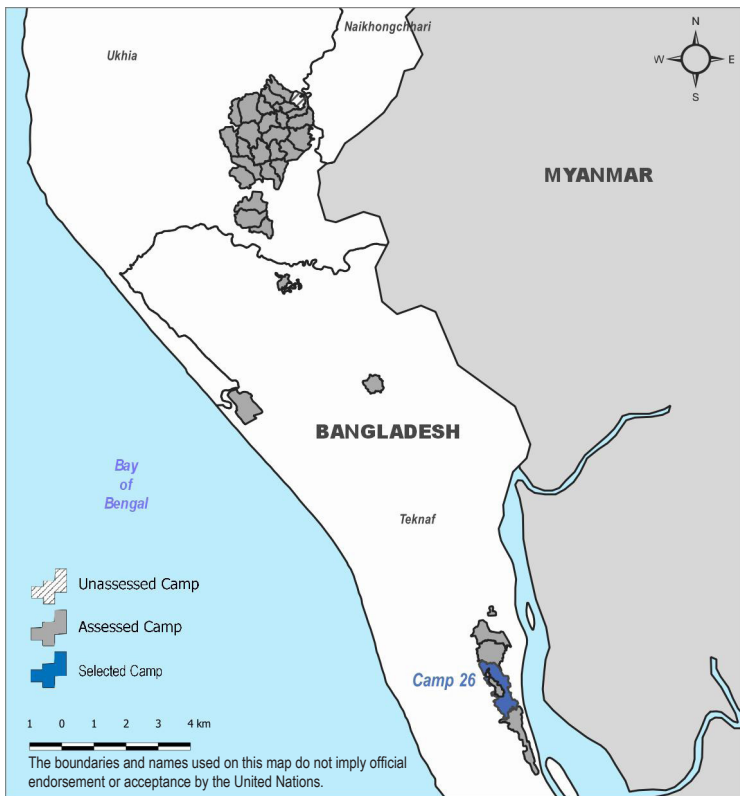

November 2019

### Background and methodology

Since August 2017, an estimated 741,000 Rohingya refugees have fled from Myanmar into Cox's Bazar, Bangladesh, increasing the total number to around 914,998.<sup>1</sup> The majority are reliant on overstretched humanitarian assistance, services, and resources including shelter, food, clean water, and sanitation. Information on Rohingya households, particularly in relation to protection and access to services, is in need of regular updating due to the variation in service provision across settlements, challenges presented by the monsoon and cyclone seasons, and the evolving social and contextual dynamics within each settlement. Therefore, REACH, in partnership with UNHCR, continued Round 6 of the Settlement and Protection Profiling (SPP) Assessment in order to support evidence-based monitoring and analysis of cross-cutting protection issues in Rohingya refugee settlements.

The sixth round of SPP was conducted in 33 out of 34 refugee camps and settlements in Cox's Bazar District from 28 October - 28 November, 2019. Surveys were conducted with households selected through simple random sampling of shelter footprints. Translators Without Borders supported with translating the form into Rohingya. Results of this assessment are generalisable to the population of each camp with a 95% confidence level and 10% margin of error. This factsheet presents an analysis of data collected in Camp 26, where 111 households were surveyed.

Where relevant, findings are compared to those of SPP Round 5 which took place from 25 June - 5 August, 2019.<sup>2</sup> November 2019 data is presented in **dark blue**, and July 2019 data is presented in **light blue**.

### Key Camp Information

Camp Management	RRRC
Site Management Support	UNHCR / ADRA
Population (individuals) <sup>1</sup>	41,007
Population (families) <sup>1</sup>	9,392
Camp Area	1.72 km <sup>2</sup>
Population density	24,100 individuals/km <sup>2</sup>

### Demographics

Household composition by gender and age:

**51%** of individuals are under 18  
**78%** of individuals are women and children

There is an average of **4.6** individuals reported per household

**5%** of households reported the presence of members with disabilities<sup>4</sup>

### From UNHCR Key Demographic Indicators dataset<sup>1</sup>

% of families with Persons with Specific Needs (PSN), by need<sup>3</sup>

Separated children	2%	Unaccompanied children	1%
Older person at risk	4%	Person with disability	3%
Older person at risk with children	1%	Single male parent with infants	1%
Serious medical condition	2%	Single female parent	23%
Families with PSN	34%		

**90%** of households arrived on 25 August 2017 or later

### Protection

Five most frequently reported interventions needed to improve the sense of safety and security in the camps<sup>5</sup>:

November 2019		July 2019	
46%	Improved paths and roads	1	Better camp management 47%
42%	Advice about safety issues	2	Improved paths and roads 45%
37%	More lighting	3	Increased community watch groups 44%
32%	Better camp management	4	Advice about safety issues 39%
29%	Increased community watch groups	5	Increased policing 31%
