

2021 3rd QUARTER SECTOR DASHBOARD

Health

Inter-Agency
Coordination
Lebanon

The 2021 3rd quarter dashboard summarizes the progress made by partners involved in the Lebanon Crisis Response Plan and highlights trends affecting people in need. The Health Sector in Lebanon is working to: OUTCOME 1) Improve access to comprehensive primary healthcare (PHC); OUTCOME 2) Improve access to hospital (incl. ER care) and advanced referral care (advanced diagnostic laboratory & radiology care); OUTCOME 3) Improve Outbreak & Infectious Diseases Control; OUTCOME 4) Improve Adolescent & Youth Health.

Progress against targets

Key Achievements

Number of beneficiaries receiving TB medication through NTP

Number of beneficiaries receiving ARV medication through NAP

1. Key achievements of the sector at the output level

The Health sector remains committed in 2021 to ensure an equitable continuation of quality healthcare to displaced Syrians, vulnerable host Lebanese community, Palestinian Refugees from Syria (PRS), Palestinian Refugees in Lebanon (PRL) and displaced population from other nationalities despite being challenged by a deteriorating economic crisis coupled with the 2019-Corona Virus Disease (COVID-19) outbreak and the impact of the several emergencies mainly Beirut Port and Akkar explosions. In 2021, the Health sector aimed to account for increased needs among the vulnerable population due to the multiple crises and therefore increased the targets among displaced population and host community.

In Q3, vulnerable refugees and vulnerable host communities benefitted from 1,487,937 subsidized consultations supported by Health sector partners against a target of 4,950,763, including 675,258 consultations for vulnerable Lebanese, 793,239 for displaced Syrians, 3,570 for Palestinian Refugees from Syria (PRS), 5,002 for Palestinian Refugees from Lebanon (PRL), and 10,868 for displaced population from other nationalities including migrant workers contributing to improving their access to primary healthcare services. The difference in the number of people reached against the set target is explained by the fact that the needs across populations have increased while the funding level remained the same. The vulnerable

populations continue to benefit from a comprehensive package of primary healthcare that includes consultations, medications for acute and chronic diseases including mental health medications, vaccination, sexual and reproductive health, mental health, and nutrition services in addition to dental services and basic laboratory testing and imaging. Overall, women and girls benefitted from 63% of subsidized consultations and men and boys benefitted from 37% of subsidized consultations.

A total of 64,286 individuals received obstetric and emergency/life-saving care during the reporting period. Some 1,131 individuals out of a total target of 123,580 are vulnerable host Lebanese community, who were added as a target under hospital care support for 2021 to address the impact of the economic crisis on vulnerable Lebanese households. Through UNRWA, 1,308 PRS and 13,452 PRL received hospital care. Due to an unexpected cut in funding, access to dialysis and blood diseases support to displaced Syrians in need was hindered in the first half of 2021. The sector continues to advocate for this urgent and life-saving support; however, no new funding to support this intervention was mobilized in Q3.

The number of Primary Health Care Centers (PHCCs) within the Ministry of Public Health's (MoPH) network reached 246 all over Lebanon in Q3. Some 28 staff were financed to join the MoPH-PHCCs.

2. Key challenges of the sector

In general, access to healthcare continued to be challenging for vulnerable populations in Q3 due to the multifaceted crises. This challenging situation hampered the ability of Health sector partners to deliver on the sector's outputs and outcomes at both the operational and coordination levels. At the operational level, vulnerable populations, particularly people with disabilities and older people, continue to face challenges to access needed primary healthcare and hospital care as many are unable to afford treatment, and transportation to primary healthcare facilities and hospitals. Some are deterred by the COVID-19 threat, noting that cases are yet again on the rise. As a result, people are deprioritizing non-urgent health care including preventive primary healthcare such as vaccination, antenatal and postnatal care, and mental health services which puts entire population at risk of preventable diseases and eventual increase in morbidity and mortality. Access to hospitals is becoming increasingly challenging for all the vulnerable population as the hospital bills and therefore the patient share is being calculated based on the market exchange rate. The unavailability of medical and surgical supplies is adding an extra challenge for people to access needed hospitalization.

Financial hardship was not only limited at the individual level, but the ability of healthcare institutions to deliver needed care was also jeopardized because of the Lebanese Pound's devaluation. From the supply side, healthcare facilities are struggling as well to maintain their medical

supply stocks and to prevent the high staff turnover that is affected by many of the healthcare workforce leaving the country due to the deteriorating socio-economic situation.

The deteriorating situation is creating challenges at all levels, impacting the business continuity of Health sector interventions across the country. Multiple risks such as increased social instability, supply and access gaps, pressure on partners due to increasing needs and others operational risks linked to transfer values and shift in currencies are hampering partners' ability to carry out interventions. Such challenges were particularly noticed at the level of importing medications. To adapt to deteriorating context, the Health sector is tailoring the response based on the compounded crises and is maximizing coordination efforts to account for the increased needs.

In Q3, the Health sector increased coordination efforts and strengthened joint work across coordination platforms to ensure a smooth planning, implementation, and reporting process. The Health sector communicated in near real-time on a variety of time-sensitive issues like fuel distribution and support to ensure the continuation of care in line with the overall sector's strategy, whilst at the same time contributing to other responses - Emergency Response Plan (ERP) and Lebanon Reform, Recovery & Reconstruction Framework (3RF).

3. Key priorities for the following quarter

Despite the challenging situation, the Health sector's key priorities remain focused on two strategic objectives: to increase access to health services for displaced populations and vulnerable host Lebanese community; and to strengthen healthcare institutions and enable them to withstand the pressure caused by the increased demand on services and the scarcity of resources.

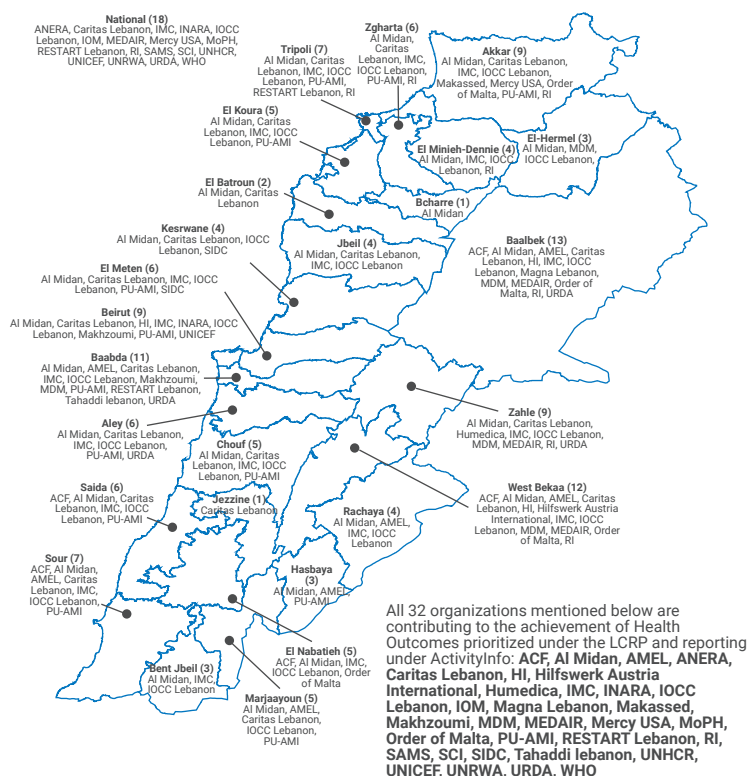

For the last quarter of 2021, and through increased health system strengthening efforts, the sector will continue to prioritize support to MoPH at the primary healthcare level with complementarity models that offer more coverage of people in need and that complement existing services while implementing infection, prevention, and control measures to prevent the spread of COVID-19. The sector will align with the immediate response model (IRM) and the national task force that is working towards the development of a national unified long-term primary healthcare subsidization protocol (LPSP)¹. Health partners will be encouraged to implement this model in the supported centers and to continue exploring in detail how to further optimize the package of services offered, including financing mechanisms, to ensure

an effective, cost-efficient, and sustainable response. Special attention will be given to maintain routine vaccination activities and to ensure an adequate stock of acute and chronic disease medications in the primary healthcare centers across the country.

At the secondary and tertiary healthcare levels, the sector will focus on improving access to hospital care for displaced Syrians and PRS, and partners will remain committed to sustaining and increasing financial support for hospital care while decreasing the patient cost share given the current economic situation. Improved access to hospital care for vulnerable host Lebanese community will also be prioritized considering the ongoing crisis and the sector will aim in 2021 to develop a protocol that partners can follow to support hospital care for the vulnerable Lebanese population. The sector will also increase advocacy for dialysis and blood disease support that is interrupted due to the cut in funding. As the economic situation deteriorates, the Health sector will keep its focus on prioritizing sustainable life-saving services for vulnerable refugees and Lebanese.

¹The primary healthcare department developed the Immediate Response Model (IRM) to coordinate the Beirut blast response and ensure the subsidization of a standardized package of services across all primary healthcare centres supported by national and international non-governmental originations. The IRM is a temporary model that delineates the protocols of subsidizing primary care service packages and provider payment mechanisms. The IRM is to be implemented for 3 months in the area affected by the blast while a more advanced long-term primary healthcare subsidization protocol (LPSP) is prepared and fine-tuned with the aim to be applied in a uniform way in all Ministry of Public Health primary healthcare centres network. For this purpose, a joint national taskforce among Ministry of Public Health primary healthcare department, relevant donors, united nations agencies and national and international non-governmental originations was created.
