SOUTH SUDAN EMERGENCY RESPONSE - ETHIOPIA
HEALTH FACTSHEET

15 November 2025

Highlights

For the second consecutive week, no new cholera cases were reported among new arrivals in the Nuer Zone. Despite partial flooding at the newly opened Cholera Treatment Centre (CTC) in Tormorok, partners sustained services. Mobile clinics from CUAMM and GOAL continued to provide public health services at Muon and Tormorok, while DPO continued to provide services and referrals at Luakdong. Community outreach continued with a focus on cholera and malaria prevention messaging. In addition, AAHI distributed mosquito nets to assist in the prevention of malaria transmission. Vaccinations continued with woreda health authorities, supported by UNICEF.

Response & Challenges

Cumulative cholera figures remain at 558 cases and 2 deaths among new arrivals in Nuer Zone since the outbreak began. Partners maintained essential services despite operational difficulties, including flooding at the newly opened CTC in Tormorok. CUAMM operated mobile clinics in Muon and Tormorok, delivering 1,298 consultations, while GOAL provided 481 consultations and sustained oral rehydration points (ORPs) for mild cholera cases at Tormorok. At Luakdong, DPO conducted 1,142 consultations and referred 31 emergency cases to secondary facilities. Community-based interventions intensified, with 50 Community Health Workers reaching 2,357 individuals with cholera and malaria prevention messaging. Between 7-11 November, AAHI distributed 10,762 mosquito nets to 3,475 HHs in Tormorok. Vaccinations and supplementation for new arrivals continued with woreda health authorities, supported by UNICEF. Key concerns include flooding at Tormorok CTC, limited ambulance availability affecting referrals, and stagnant water in Luakdong and Tormorok increasing malaria risk. Continued coordination and resource mobilization remain vital.

Achievements

- **26,038** Children 0-15 Years Vaccinated with OPV
- **22,907** Children 6 Months to 15 Years Vaccinated with Measles
- **44,130** People More Than 1 Year of Age Vaccinated with OCV
- **19,095** Children 6-59 Months Supplemented with Vitamin A
- **11,461** Children 24-59 Months Dewormed with Albendazole
- **558** Cholera Cases Identified and Received Appropriate Treatment
- **37.21%** Proportional Morbidity Attributed to Malaria
- **427** Emergency Medical Cases Referred to Secondary Health Facilities
- **27 of 35 (77%)** Proportion of Deliveries Attended by Skilled Health Worker
- **13** People Receiving Clinical Mentalhealth Treatment (New + Repeat)
- **24** People Receiving Individual Level Focused Psychosocial Support (New + Repeat)
