# EXPLANATORY NOTES:

## SUMMARY:

This matrix is prepared and published monthly, representing what happened in various sectors in the particular reference month. This indicators matrix is a step towards showing a comprehensive picture of the current situation in Gambella region and establishing a basis for initial trend and gap analysis. In order to better understand the matrix, following are the explanatory notes on some of the sector indicators:

### NUTRITION:

- All recovery rates for both SAM (OTP) and MAM (TSFP) are well within the SPHERE standards of performance

### SHELTER:

- There is a lack of shelter coverage in terms of semi-permanent/transitional shelters. The % of households in emergency family shelter indicates the need for continuous shelter intervention in all the camps.
- 'Transitional shelters' refers to those that have been completed with mud plastering. However, some of the semi-permanent structures in the matrix have not been yet mud plastered, as the mud plastering activity is done by the beneficiaries and mobilizing the community is time taking.
- Letichuor and Nip Nip camps shelter data shown in the matrix is for the new caseload displaced post 15 December 2013 is the same as of November 2014 as there is no activity going on in terms of shelter. The relocation to Jewi camp will happen very soon. Demarcation of plot is on-going in Jewi.
- Entry points and transit centers are all with communal hangers and therefore not included in the matrix. The indicators are based on the total number of registered households.

### WATER, SANITATION AND HYGIENE (WASH):

The WASH indicators have been generally maintained and slightly improved in the period from primo January to primo February:

1. Significant improvement is observed all refugees camps especially in kule and Tierkidi

increasing the slatrine coverage

2. Water coverage was maintained above sphere standards in all camps

#### Important note:

- The indicators for the camps are broadly administrative indicators i.e. the indicators are currently relying on total camp population (entire protected refugee population) as the denominator however due low profile observed at the entry points/transit centers , indicators were not provided.

### EDUCATION:

The education indicators for Gambella continue to show a 3% decline in the period from primo March to primo April  
1. The overall enrolment rate for the age group 3-18 has dropped from 52% to 49%.

a) Enrolment for Early Childhood Education (3-6 years-old) remains weak for the four camps of Kule, Tierkidi, Leitchuor and Pugnido and is now at 40% which has slightly gone up by 4% as compared to previous month.

b) Primary enrolment - A decline of 9% has been noted in this category. However, it must be noted that the enrolled students in many cases are above the target age of 7-14, which is statistically somewhat misleading.

2. Boys' enrollment (53%) remains higher than girls' enrollment (44%) with a 9% gap between the two.

3. Secondary Education enrolment in Pugnido camp remains same at 15% compared to the previous month.

4. Please note that the reporting is covering enrolled students and not attendance (the actual number of children attending classes). The sector is experiencing a discrepancy between the two, which is being strategically addressed by the Gambella Education Working Group.

### HEALTH:

#### **Mortality:**

Crude and Under 5 mortality rates have been within the SPHERE standards for several weeks. Good case management by partners of diseases such as severe malaria, dehydration secondary to diarrhoea and complications of severe malnutrition, coupled with strengthened surveillance and prevention efforts have plausibly contributed to the low mortality.

#### **Morbidity indicators:**

Diarrhoea: Low incidence of diarrhoea might be explained by the ongoing sensitization of the refugees by the Community Outreach Agents (COAs) on hygiene and sanitation. WASH activities are also ongoing in all locations.

Malaria: Incidence rate is high in Nip-Nip compared to other locations and can be explained by low utilization of Long Lasting Insecticide nets (LLIN) at this location, as a result transmission rate is still high. Enough resources were directed to refugee locations to ensure that diseases are prevented, for instance People of concern have better health status.

#### **Vaccination:**

The coverage is between the spheres > 95% at the entry points of Pagak, Akobo, Burbiey and overall Gambella same as coverage for Vit A. The coverage is lower in the camps because most children had been vaccinated at the entry points and thus not reflected in the camp data. At all entry points, non-selective arrival vaccination service is on-going for all eligible asylum seekers regardless of registration status. At Matar transit center, we have been conducting selective arrival vaccination service for those children who didn't get vaccination at burbeiy and Akobo entry points and babies who were born at matar transit center.
