

Outbreak Alert and Response

In Week 33, disease outbreak alerts are issued for the following diseases. See notes below for calculation of alert thresholds.

Suspected Meningitis Alert

Calculation of disease alert thresholds:

Watery diarrhoea = 1.5 x baseline[‡]
 Bloody diarrhoea = 1.5 x baseline[‡]
 Measles = 1 case
 Meningitis = 5 cases
 Acute Flaccid Paralysis = 1 case
 Acute Jaundice Syndrome = 1.5 x baseline[‡]

Footnotes

[‡] *baseline = average incidence or number of cases over the previous 3 weeks*
 * % morbidity refers to proportional morbidity of the disease for the current reporting week
 ** Incid / cases is the incidence (/1000/week) or number of cases for the current reporting week (incidence is shown unless otherwise indicated)
 *** Trend shows if the incidence or number of cases between the previous and the current reporting week increased (↑), decreased (↓) or
