

IRIS SCANNING

Why is UNHCR doing using the Iris Scanning?

- Every one of us has a unique iris just like having a unique finger print. UNHCR will be using the technology of iris scanning during A waiting area of 1,000 individuals.

registration of individuals to verify data. This is also an anti-fraud measure to forbid persons from registering more than once or pretending to be a different person and will allow us to properly use our resources.

How is this done?

A UNHCR registration staff will take a picture of your iris with a camera. It takes a few seconds and it is not painful.

Will this affect my health?

Scanning your iris is totally safe and **will not** have any side effects on your eye or your health.

Who will be included in the iris scan?

All individuals who will newly register with UNHCR and individuals who have already registered when they come for renewal.

Will the image of my eyes be shared?

The iris images will be saved on UNHCR's database and will not be shared without your consent.

Registration with UNHCR is free of charge
