²Actual capacity is calculated as the subtraction of current places minus 15% which is this week's estimated average natural loss for mainland and 12% for islands. Natural loss is the number of places that cannot currently be used because of damages/repairs, protection issues, family size, etc. The formula applies to all type of accommodation.

Actual capacity is a close estimate of available places to be used as reference.

³Occupancy rate is calculated as the percentage of current population over actual capacity.

*The actual available capacity is estimated to be at 759. This comes from 216 places on islands and 543 places on mainland. It can be used for immediate planning.
