<sup>1</sup>Actual capacity is calculated as the subtraction of current places minus 11.5% which is this week's estimated average natural loss for mainland and 2.5% for islands. Natural loss is the number of places that cannot currently be used because of damages/repairs, protection issues, family size, etc. The formula applies to all type of accommodation. Actual capacity is a close estimate of available places to be used as reference.

In some cases, current population may exceeds the actual capacity due to the estimation of the natural loss.

<sup>2</sup>Occupancy rate is calculated as the percentage of current population over actual capacity.

The actual available capacity is estimated to be at 530 places (mainland: 390 / islands: 140).

As of today 340 places have been reserved for planned transfers (mainland: 277 / islands: 63).

Considering an average natural loss (10-15%) the remaining available places are 148 (mainland: 76 / islands: 72)
