¹Actual capacity is calculated as the subtraction of current places minus 12% which is this week's estimated average natural loss for mainland and 4.5% for islands. Natural loss is the number of places that cannot currently be used because of damages/repairs, protection issues, family size, etc. The formula applies to all type of accommodation. Actual capacity is a close estimate of available places to be used as reference.

In some cases, current population may exceeds the actual capacity due to the estimation of the natural loss.

²Occupancy rate is calculated as the percentage of current population over actual capacity.

The actual available capacity is estimated to be at 347 places (mainland: 277 / islands: 70).

As of today 196 places have been reserved for planned transfers (mainland: 156 / islands: 40).

Considering an average natural loss (10-15%) the remaining available places are 124 (mainland: 100 / islands: 24)
